

ADMINISTRATION OF BENGAL
1876-77

REPORT FOR THE YEAR 1876-77.

CONTENTS.

PART I.—PHYSICAL AND POLITICAL GEOGRAPHY.

CHANGES OF ADMINISTRATION—	PAGE.
Introduction	1
Events of political significance and the famine	1
Result of the famine	2
Assumption of the imperial title by Her Majesty the Queen	2
Appointment of the Hon'ble Ashley Eden as Lieutenant-Governor	3
Extension of the system of provincial finance	3
Re-constitution of the Secretariat staff	3
Constitution of the district of Noakholly into a separate Judgeship	4
Presidency Magistrates' Act (IV of 1877)	4
Indian Marine	4
Re-organization of the Pilot Service	5
Separation of the Civil Service into two distinct branches, the Executive and the Judicial	5
Retirement of Civilians	6
Cyclone and storm-wave in the south-eastern districts of Bengal	6
State of public feeling	7
Affairs in the Sonthal Pergunnahs	7
Relations between landlords and tenants in Northern Behar	7
Indigo cultivation in Behar	8
Working of the new Land Registration Act	8
Sales of estates	9
Partitions	9
Redemptions of land revenue	10
Land taken up for public purposes	10
Notices of enhancement and relinquishment	10
Proposed legislation to facilitate the realization of rent	11
 RELATIONS WITH TRIBUTARY STATES AND FRONTIER AFFAIRS—	
Cooch Behar	12
Chittagong Hill Tracts	14
Hill Tipperah	17
Tributary Mehals, Orissa	18
Tributary States of the South-Western Frontier	19

PART II.—ADMINISTRATION OF THE LAND.

SURVEYS—	
Professional	22
Non-professional	22
Midnapore survey	22
Hooghly registers	23
Khoordah estate survey	23
Dearah survey	24
 SETTLEMENTS—	
Chittagong	25
Pooree	26
Midnapore	26
Backergunge	26
Miscellaneous	26
Sonthal Pergunnahs	27

GOVERNMENT ESTATES	PAGE. 28
WARDS' ESTATES	30

PART III.—PROTECTION.

COURSE OF LEGISLATION	36
---------------------------------	----

POLICE—

Strength and cost of the police	40
Municipal police	40
Village police	41
Miscellaneous	41
Education	41
Punishment and rewards	41
Cognizable crime	42
Non-cognizable crime	48
Police in Calcutta and Suburbs	49
Arms' Act	50
Old offenders	50

CRIMINAL JUSTICE—

High Court, Original Jurisdiction	51
High Court, Appellate side	51
Court of Sessions, Original Jurisdiction	51
Court of Sessions, Appellate Jurisdiction	51
Courts of Magistrates	51
Number of witnesses examined	52
Increase and decrease of imprisonments in different districts	52
Juveniles	52
Reconvictions	52
Whipping	52
Daily number of prisoners	53
Precautions against accidents during the Rath festival	53
Period after which execution of sentences of death should take place	53
Revised rules for the payment of the expenses of complainants and witnesses	54

PRISONS—

Number of prisoners	55
Length of sentences	55
Releases	55
Condition and management of sub-divisional lock-ups	55
Jail accommodation	56
Expenditure on jail buildings	56
Escapes	56
Discipline	57
Punishments	57
General expenditure	57
Manufacturing charges	58
Sanitary	59

CIVIL JUSTICE —

High Court, Original Jurisdiction	61
High Court, Appellate side	61
Constitution of Divisional Appellate Courts	61
Calcutta Court of Small Causes	61
Courts in the interior	62
Character of suits	64
Execution of decrees	65
Court of Small Causes in the interior	65

REGISTRATION—

Increase of registration	67
Perpetual leases	69
Term leases	69
Optional registrations	70
Finance	70
Mahomedan Marriage Registration Act	71

	PAGE.
MUNICIPAL ADMINISTRATION—	
Calcutta Municipality	72
Finance	72
Collection of rates	73
Roads	73

ADMINISTRATION OF BENGAL, 1876-77.

I.—PHYSICAL AND POLITICAL GEOGRAPHY.

Changes of Administration.

THE present chapter is intended to serve as a general introduction to the report contained in the following pages.

Introduction. It will briefly notice various subjects, which will be treated of in greater detail in subsequent sections of the report, and it will give some information regarding those events and measures of the year which are of general interest and importance, but which do not properly fall under any of the special heads into which the report is divided. In accordance with the practice of previous years, the narrative will not be confined to the occurrences of the official year closing with the 31st March 1877, but will form a continuous record of such matters as appear worthy of notice up to the date of the actual compilation of the report.

The year 1877 will be memorable not only in the annals of Indian administration and in the pages of the future historian of the country, but in the recollections and feelings of all classes of the people. The opening of the year, signalized by a ceremony of the highest political importance, and by the loyal enthusiasm which the occasion evoked throughout the land, was even then overclouded by the shadow of the great calamity of famine which shortly afterwards overspread the southern and western presidencies. The outbreak of war between Russia and Turkey appealed strongly to the sympathies, both political and religious, of an important section of the population. In Bengal, however, the effect of these occurrences was less keenly and less directly felt than in other parts of the empire. In connection with the war between Russia and Turkey religious services were held in some of the Calcutta mosques, and subscriptions were raised to succour the sick and wounded and the families of soldiers who might fall in the war; but the movement hardly extended beyond the presidency town, and excited little interest among the bulk of the Mahomedan population in the

Events of political significance and the famine.

eastern districts. The famine, which desolated the districts of Southern India, extended to only one corner of the provinces under the Bengal Government, a tract of about 100 square miles in the south-west of Orissa, near the Chilka lake. Throughout this tract the harvests almost entirely failed, and a population of about 12,000 souls was reduced to a condition of the utmost destitution. Relief was afforded by Government and from private charity; local public works were set on foot; and though there was much unavoidable suffering, the worst extremities of famine were thus averted.

One result of the famine in the south and west of India was to stimulate commercial activity in Bengal to an almost unprecedented extent. Large quantities of grain were forwarded westward by the railway, still larger quantities were sent by sea to the south. The charges for freight rose to an unusual height; the port of Calcutta was crowded with vessels taking cargoes on board for Madras; there were not enough cargo boats to put the rice on board, and an insufficient number of pilots to take the ships to sea. For several months all the appliances of the port were strained to the utmost to supply this unusual demand. At the same time the calamity, which thus stimulated enterprise, had also the effect of quickening benevolence. A Famine Relief Committee was organized, embracing all classes of the community, and subscriptions to the amount of above £12,000 were collected and remitted to the distressed districts. A separate appeal, made by the Chief Commissioner of Mysore, was liberally responded to in the districts of Behar, which had been assisted three years previously in the time of their own need, and a sum of about £1,300 was collected and forwarded to Mysore from the Patna and Bhagulpore Divisions.

The assumption of the imperial title by Her Majesty the Queen was celebrated throughout Bengal on the 1st January 1877 by durbars held at the head-quarters of each of the Divisional Commissioners in the Lower Provinces. In Calcutta a durbar was held by the Commissioner of the Presidency Division for Calcutta and the 24-Pergunnahs. At Cuttack one durbar was held by the Commissioner for all the districts of Orissa. At Bankipore the Commissioner held one durbar for the districts of Patna, Gya, and Shahabad. The durbar held at Howrah by the Commissioner of Burdwan included the district of Hooghly, and that held by the Commissioner at Chittagong included the Hill Tracts of Chittagong. At the head-quarters of every other district a durbar was held by the chief civil authority. The ceremonies which were observed at the durbars consisted of the reading of the Act of Parliament authorizing an addition to the titles of Her Majesty and of the Royal Proclamation in English and the vernacular, the delivery of an address by the presiding officer, the distribution of certificates of honour to those gentlemen who had distinguished themselves by assisting in the administration of the district or who had otherwise rendered good service to Government; and in those districts where troops were stationed, they were paraded and fired salutes and a *feu-de-joie*. The durbars were in most cases followed by fireworks, illuminations, and other public rejoicings, and by the

Assumption of the imperial title by Her Majesty the Queen.

distribution of alms to the poor. The sum of Rs. 40,000, granted by the Government of India in aid of the public rejoicings on this occasion, was distributed among Calcutta and a few of the chief towns, and was largely supplemented by contributions from private individuals in other districts. At Dacca, Rungpore, and Cuttack large donations and subscriptions were made with a view to commemorate the occasion in some permanent form. Under the orders of the Government of India 3,082 convicted prisoners in Bengal were released on the 1st January, and partial remissions of their sentences were granted to 5,862 more. Sixty-four debtors were also released from the civil jails on the same date, the Government taking upon itself the responsibility of paying the claims for which they were detained, amounting in all to Rs. 3,389. In addition to the prisoners released in the Lower Provinces of Bengal, arrangements were made, in communication with the Home Department, for the release of a certain number of convicts undergoing sentences of transportation at Port Blair and other penal settlements. From the reports received from local officers, it appears that in all districts there was a very commendable display of loyalty on the occasion of the proclamation of the Queen's new title, and that the gracious sentiments expressed towards the people of India by Her Majesty were well received and appreciated.

Sir Richard Temple was Lieutenant-Governor of Bengal throughout the year 1876. Early in January 1877 he was deputed by the Governor-General in Council on special duty to the distressed districts in the Madras and Bombay presidencies, and the Hon'ble Ashley Eden was appointed to officiate as Lieutenant-Governor of Bengal. Subsequently, Sir Richard Temple having been appointed to be Governor of Bombay, Mr. Eden was confirmed in the Lieutenant-Governorship of Bengal, with effect from the 1st May 1877.

The arrangements made in 1877 for extending the system of provincial finance and increasing the responsibility thereby thrown upon the local Government are explained in detail in the chapter of the report which is devoted to the subject. Having regard to the great increase of financial work involved in this expansion of the decentralization system, and to the great importance of watching and controlling the provincial revenues and expenditure, the Lieutenant-Governor was of opinion that it was absolutely necessary to relieve the Judicial and Revenue Secretaries, who were already fully worked, of all questions connected with finance, accounts, and taxation, and to place these departments of the administration in the hands of a separate Secretary, who should give his whole time to such subjects, and should also take charge of the important work of supervising the collection and collation of trade statistics—a duty which had previously been performed by the Junior Secretary. Proposals were accordingly submitted to the Government of India for the appointment of a Financial Secretary and an additional Under-Secretary, the post of Junior Secretary being abolished, and the salary of the Junior Secretary to the Board of Revenue being at the same time somewhat reduced. The

Appointment of the
Hon'ble Ashley Eden as
Lieutenant-Governor.

Extension of the system
of provincial finance.

Re-constitution of the
Secretariat staff.

Government of India sanctioned these proposals as an experimental measure for a period of two years, and effect has subsequently been given to the arrangement. Excluding the Department of Public Works, which is not affected by these changes, there are now three Secretaries to the Government of Bengal, in charge of the Judicial, the Revenue, and the Financial Departments respectively. The Judicial and Revenue Secretaries are each assisted by an Under-Secretary, and the Financial Secretary by an Assistant Secretary. The appointment of Assistant Secretary has been conferred on a Native gentleman.

The sanction of the Government of India was received during the year 1877 to a proposal for the constitution of the district of Noakholly into a separate Judgeship. Previous to this the Judge of Tipperah held periodical sessions at Noakholly, but all the civil appeals were heard at Comillah, the head-quarters of the Tipperah district, and all suits above Rs. 1,000 in value were instituted at that station, there being no judicial officer in Noakholly with powers above those of a Moonsif. The recent transfer of two thanas, one from Tipperah and one from Chittagong, to Noakholly having much increased the importance of the district, it was considered that the appointment of a separate Judge to Noakholly would conduce to the timely disposal of suits and to the maintenance of a proper control over the subordinate judicial officers, while it would relieve the people from much irksome and unnecessary inconvenience. The Government of India was accordingly asked to sanction a proposal for increasing the number of District and Session Judges in Bengal by one, the post of Additional Judge in the districts of the Dacca Division being at the same time abolished; and this proposal, having been approved, was brought into effect on the 1st May 1877, the moonsifees, or subordinate civil jurisdictions, being also re-arranged to suit the altered circumstances of the new districts.

The passing of the Presidency Magistrates' Act (IV of 1877), which came into force on the 1st April 1877, has enabled the Government to avail itself more largely than before of the services of Honorary Magistrates in Calcutta. Such Magistrates were previously employed in hearing municipal cases only, but it has now been arranged that they shall sit in rotation with the stipendiary Magistrates as a bench for the disposal of police cases. Rules for the sittings of the bench have been framed under section 9 of the Act, and have been approved by Government.

An important change was introduced during the year 1877 into the constitution of the Marine Service of India. The whole of the marine establishments, afloat and on shore, employed under the several Governments and provinces of India, have been amalgamated into one imperial service, designated "Her Majesty's Indian Marine." This service is entirely under the supreme Government of India, but it is intended that such portion of it as may be required for service within the limits of local Governments shall from time to time be placed at the disposal of those authorities. The first appointments of officers to the Indian Marine will be made by the Secretary of State; their subsequent promotion,

and the appointment and promotion of non-commissioned officers, will be made by the Governor-General in Council. All marine establishments, dockyards, and vessels on the eastern side of India, have been placed under the Superintendent of Marine, Calcutta, a similar officer for the western coast having been appointed at Bombay. These officers will be responsible to the Government of India for the discipline, interior economy, and efficiency of the establishments, dockyards, and vessels within their respective limits. They will also be the advisers of the local Governments on all subjects connected with marine matters and the establishments in their charge, as well as the channel of communication between local Governments and the commanders of the vessels at the disposal of those Governments. The appointments of Master Attendant, Harbour Master, &c., connected with duties appertaining to the mercantile marine and the Board of Trade, or other local marine service, have been abolished, and those officers will henceforth be styled Port Officers. It is intended that these appointments shall be classified, and shall be held for fixed periods by selected officers of the Indian Marine. These orders, however, do not extend to pilot establishments, local light-houses and light-vessels, appointments of shipping-masters, &c., all of which will be placed, as far as practicable, under local authorities or Port Commissioners.

The scheme for the re-organization of the pilot service, which had for some time been under discussion, also came into effect during this year. The details of the subject more properly belong to the Marine chapter of this report; but it may be mentioned here that the strength of the pilot service has been fixed at 70, of whom 12 are branch pilots, 40 masters, and 18 mates. The masters' grade is further subdivided into 20 senior and 20 junior masters, and the limits of tonnage for each grade have been revised accordingly. Arrangements have also been made for the future recruiting of the pilot service from the training ships in England, and the first batch of seven young men appointed under these orders arrived in Calcutta in October 1877.

The details of the scheme for the separation of the Civil Service in the Lower Provinces into two distinct branches, the executive and the judicial, have now been finally settled, and it has been arranged that every covenanted civilian shall be called upon between the tenth and the twelfth year of his service to elect the branch of the service to which he desires to be attached, and that orders shall be passed on his choice by the local Government. The Government does not bind itself to accept absolutely the choice made by each officer, but reserves a power of decision, in view of the interests of the public service and the qualifications of the officer concerned. But when an officer has once been placed on the list of one branch of the service, he will not be transferred to the other branch without the previous sanction of the Governor-General in Council. In applying these principles to the senior members of the service, it was ruled that officers who had already been substantively promoted to District Judgeships or to Collectorships of the first grade should be considered to have elected the judicial and the executive branches respectively. Adding to these the officers to whom

Re-organization of the pilot service.

Separation of the Civil Service into two distinct branches, the executive and the judicial.

an election was offered, it appeared that 92 officers had chosen the executive, and 59 the judicial, line of the service. Of the whole number of appointments, 55 belong to the executive and 39 to the judicial branch, while 24 appointments are open to members of either branch. These appointments are exclusive of the Civilian Judgeships of the High Court and of the Registrarship of the High Court on the appellate side, these last appointments not being under the Government of Bengal, but officers holding them will be understood to have elected the judicial branch. Looking to the number of appointments available to the two branches of the service respectively, it will be seen that the proportion of officers who have elected to serve in either line corresponds very accurately with the number of appointments open to them.

The alleged injury caused to the junior members of the covenanted Civil Service in the Bengal presidency by the stagnation of promotion arising from the numerous admissions to the service made in the years 1861 to 1863 has for some time been under the consideration of Government. A despatch from the Government of India, received in March 1877, informed this Government that the Secretary of State had agreed to extend to the Lower Provinces of Bengal a concession sanctioned last year for the civilians of the North-Western Provinces, and to allow during the current year any civilian of 20 years' service, who had not completed the full term of residence, to retire on a pension bearing to £1,000 per annum the proportion which his actual residence bore to 21 years, the full term required for full pension. Officers who accepted this offer were also permitted, under certain conditions, to receive the capital value of a portion of their pensions. Eight members of the covenanted Civil Service have applied to be permitted to retire under these orders.

The preliminary chapter of last year's report contained an account of the cyclone and storm-wave which devastated the south-eastern districts of Bengal on the night of the 31st October 1876. Subsequent inquiries have shown that the actual loss of life by drowning was fortunately not so great as it was at first estimated to have been. The total number who perished on that disastrous night, so far as the officers of Government have been able to ascertain, was 98,945, of whom 2,901 belonged to the district of Chittagong, 43,544 to that of Noakholly, and 52,500 to that of Backergunge. The cyclone was followed by a terrible outbreak of cholera in the affected districts, and the disease did not disappear till the end of January 1877. The deaths from cholera are known to have reached the number of 37,662, and the actual mortality was probably even greater than this. The total loss of life, directly and indirectly attributable to the cyclone, must have amounted to nearly 150,000 souls. The authorities exerted themselves to the utmost to alleviate distress and to combat sickness. Charitable relief was afforded where required, advances of money were given to the distressed ryots, the payment of the Government revenue on some estates was suspended, and large additions were made to the local medical staff. It is satisfactory to find that, notwithstanding the appalling destruction of life and property and the serious injury done

to the crops on the ground, the affected localities have shown no signs of permanent impoverishment. The people have returned to their accustomed avocations, trade and commerce have resumed their activity, and the resources of the districts have proved sufficient not only to supply the wants of their own population, but to export food in large quantities to meet the demands of Madras. A valuable report on the cyclone from a scientific point of view has been prepared by Mr. J. Eliot, the Meteorological Reporter to the Government of Bengal.

The year was for the most part a prosperous one in Bengal, and the reports upon the state of public feeling show the people in general to have been tranquil and contented. The active demonstrations of loyalty called forth by the ceremony of the 1st January have already been noticed.

In the Sonthal Pergunnahs the settlement operations have been going on throughout the year, and, as far as the field work of the Government officers is concerned, will soon be at an end. But the task of distributing the village lump assessment among the cultivators by means of punchayets has still in a great measure to be carried out, and until this is done the benefits of the revised assessments and fixity of tenure will hardly be appreciated by the mass of the people. There has been no fresh development of the semi-religious movement reported in former years.

In some of the districts of Northern Behar the relations between landlords and tenants are described as being by no means cordial. The zemindars complain that the ryots do not pay their rents, and that they are unable to enforce decrees; while the ryots complain of illegal distrains, oppression, enhancements, and summary ejectments. There can be no doubt whatever that the combined influence of zemindars and *ticcadars* has ground the ryots of some parts of Behar down to a state of extreme depression and misery. The majority of them probably do, as a matter of fact, possess rights of occupancy, but owing to change of plots, and the subjection of the putwarees to the zemindars, they are unable to produce legal proof of this. There are, however, signs that the ryots are beginning to understand better their legal rights. They are beginning to pay their rents into court in accordance with the zemindars' returns under the Road Cess Act; they are learning to recognize and to resist illegal attempts at distraint; they find that the sub-divisional and district officers are ready to listen to them and advise them for their good, and they are beginning to resort more freely to them for such advice. The tenants of small proprietors, moreover, see that in the great Durbhunga estate the position of the cultivators is being improved, defined, and settled, and this encourages them to demand more equal treatment for themselves. The indigo-planters have already intimated their readiness to pay them better rates. There is, in fact, a general stirring throughout the Division, which cannot fail to have a good effect; and it will be for Government and the local officers, assisted by the better class of planters and zemindars, to guide, foster, and control this movement, until the relations of all parties are placed upon a just and equitable basis.

There are in Behar many intelligent and wealthy landholders, and it is for them to consider whether it is not to their advantage to meet this movement half way and endeavour to establish permanent occupancy rights and security of tenure on their estates, and to check at once the system of treating the cultivators of the soil as mere squatters, liable to eviction and to be rack-rented at the whim of the proprietor or amlah—a system which now exists in too many estates. Nothing can tend so much to the prosperity of an estate as a good, well-to-do, and contented tenantry, having a permanent interest in the soil; and it is for the landholders to establish such a state of things before the growing discontent and increasing intelligence of the people lead to open rupture between zemindars and ryots. The system of irregular distraint has been carried to great extremes in some parts of Behar, and the Lieutenant-Governor has desired the Commissioner to impress upon the Collectors the necessity of putting a stop to this cautiously and gradually, confining the zemindars to the procedure laid down by law. No doubt the conditions under which the people of Behar hold their lands are in some respects exceptional, and the Lieutenant-Governor has already intimated his readiness to consider, if necessary, exceptional legislation for this part of the country in the matter of the collection of rent.

With regard to the question of indigo cultivation in Behar, the Lieutenant-Governor had occasion, soon after assuming charge of the administration, to declare, in considering a proposal which was made last year for a commission of inquiry into the system of indigo planting, that before taking any steps to regulate it by law he would await the result of the measures of reform which the planters on his invitation themselves resolved to initiate. He declared himself ready to consider any suggestions which they might make, and any amendments of the existing rent-law which they might deem necessary to place the relations of zemindar, planter, and ryot on an equitable basis. The Lieutenant-Governor is fully convinced that the downfall of the indigo industry in Behar would be a public calamity, and has no doubt whatever that it may, by judicious modifications and a fairer distribution of profits, be carried on without friction and to the advantage of all concerned. Mr. Eden gladly acknowledges that a very considerable step towards placing matters on a sounder basis has already been taken, and that his proposals for reforming the old system have been met by the planters in a cordial and conciliatory spirit. Indeed he sees every reason to believe that they recognize the fact that if the indigo trade is to continue it can only be by a greater recognition of the rights and interests of those who actually grow the crop. The reforms which some of the planters have already introduced into the system have been attended with the most beneficial results.

The subordinate establishments of sub-deputy collectors and canoongoes are reported to have worked well during the year, and they were found especially useful in assisting the operations connected with the introduction of the new Land Registration Act. This measure became law in August 1876, and all proprietors were required to register

Working of the new
Land Registration Act.

their names and interests within six months from the 1st November following. The number of mutation cases was consequently much larger than usual, 5,044 cases having been decided under the old Regulation, VIII of 1800, and 7,618 cases under the new Act. The effects of this measure have as yet been only very partially realized; but it is confidently hoped that the maintenance of a complete and authoritative register of all lands, with the names and shares of the actual possessors, will be a great convenience both to the Government, to the landed proprietors, and to all classes of subordinate holders and ryots.

The statements of proceedings under the sale laws show that of 4,825 estates and shares which became liable to sale under Act XI of 1859 only 496, or little more than one-tenth of the whole, were actually sold, the remainder having been exempted from sale on payment of the arrears due. The only district in which sales were numerous was Chittagong, in which 1,225 estates became liable to sale and 286 were sold. This is attributed in the report to the difficulties and losses caused both to proprietors and tenants by the cyclone. But the number of estates sold for arrears of revenue in Chittagong amounted to 259 in 1875-76, to 277 in 1874-75, and to 318 in 1873-74; and while it is only just to recognize the difficulty of making punctual collections from a large number of petty estates, it is to be regretted that the sales for arrears in a single district should year after year be as numerous as those in all other districts together, and the Board have been asked to consider whether some remedy cannot be applied. The sales in other districts call for no special remark, and the law appears to have been administered with leniency and consideration. The revenue demand of the estates sold was Rs. 70,548, and the purchase-money realized was Rs. 6,81,216, or an average of a little more than nine times the Government revenue. The number of estates purchased on behalf of Government was 59, with a revenue demand of Rs. 1,348. Appeals against sales were preferred in 19 cases, and in seven of these the sales were annulled. In 11 other cases the Board recommended the annulment of sales under section 26, Act XI of 1859, on the ground of hardship to the proprietors.

The total number of partition cases disposed of during the year was 638, against 366 in the previous year, while there was also a decrease in the number of cases instituted: so that the files of pending cases have been considerably reduced, though they still represent about two years' work. The great majority of the partition cases occurred in Behar, and five-sixths of the whole number disposed of belonged to the Patna Division. The new Partition Act [VIII (B.C.) of 1876] did not become law till September 1876, and its working has not yet been fully tested by experience. It is stated that at present it has had the effect of diminishing the number of cases instituted, as applicants for partition are now required to be recorded proprietors. But this result will, of course, be only temporary.

There is no doubt that in Behar generally, and especially in the districts of Mozufferpore and Durbhunga, the subdivision of property by means of the partition law is proceeding at a very rapid rate. The number of estates on the revenue-roll in

these two districts has trebled within the last 25 years, and in Mozufferpore alone no less than 1,531 additional estates have been formed by butwara during the last two years. In the opinion of the Collector this minute subdivision of property arises in a great measure out of disputes between shareholders connected with the practice of leasing indigo lands under the ticcadaree system; but whether this opinion is correct or not, the matter is evidently one in which it is not desirable that the Government should attempt to control the wishes and tendencies of the people. It may be added that the difference in this respect between Behar and other parts of the Lower Provinces is perhaps more apparent than real. In the Burdwan Division there was not a single partition case during the year, but it cannot on that account be supposed that no subdivision of landed property occurred. A system of subinfeudation, no less than a system of partition, has the effect of breaking up estates, and the social and economic results of the one system do not greatly differ from those of the other. It is true that the effects of the partition system are more prominently brought to the notice of a Collector, because the revenue of each of the partitioned estates has to be separately apportioned and realized, and difficulties might arise if this were carried to an extreme. But the law has provided against this by declaring that no separate estate shall be formed with a Government demand of less than one rupee unless the land revenue is redeemed.

The redemptions of land revenue extended to 74 petty estates and holdings in Calcutta, the Suburbs, and Chittagong. The total amount of revenue redeemed was Rs. 137, and redemption was permitted at a uniform rate of 25 years' purchase. The number of redemptions exceeds that of the three previous years, but the average revenue of each holding has diminished. In two cases Government lands were alienated for public purposes without payment—one of these plots being for the site of a Magdalen Home in Calcutta, and the other for a Mahomedan cemetery in the district of Moorshedabad.

The total area of lands acquired for public purposes during the year was 6,255 acres, for which compensation was paid to the amount of Rs. 15,18,747, besides abatements of revenue amounting to Rs. 133. Some of the lands required for relief roads and tanks were given free of cost by the owners. The compensation paid for 14 acres 13 poles of land required by the Port Trust for roads, wharves, and tramways amounted to more than two-thirds of the whole sum expended, and the high value of land in Calcutta is strikingly illustrated by the fact that these lands cost on an average more than Rs. 70,000 an acre, and that some portions of them which were re-sold fetched even considerably more than this. About three lakhs of rupees were paid for lands taken up by the Irrigation Department, principally in the district of Midnapore.

An increase or decrease in the number of notices of enhancement of rent or relinquishment of lands issued during the year is considered to afford some test of the relations which exist between zemindars and their ryots. In 1876-77, as compared with the previous year, the notices

of enhancement in all districts of the Lower Provinces decreased from 8,710 to 8,216, while relinquishment notices increased from 8,073 to 9,051. But it is evident that these figures supply no real gauge of the general condition of the question. The total number of notices is so small that the action of a single zemindar may materially affect the result; and it must also be remembered that the diminished number of notices may be a sign, not that the disputes between the parties have been arranged, but merely that the disputants are unwilling to submit their differences to the decision of the law. This would appear to be the case in the Dacca Division. It has been already remarked that in Behar, where the power of the landlords has practically been almost unlimited, the ryots are showing a readiness to assert their rights and to resist illegal claims.

On the whole, the result of the information which the Lieutenant-Governor has acquired in his visits to various parts of the Lower Provinces is that there has been little open display of animosity during the year between landlord and tenants, and it has not been necessary in any case to have recourse to the special procedure of the Agrarian Disputes' Act. In some districts certainly there is every indication that the landlords and tenants, who have been disputing for years, are now coming to terms and making mutual concessions. The causes of dispute, however, have not been removed, and the real grievance is that the state of the law is such as practically to involve a denial of justice to either party who may attempt to put the law in motion. The zemindar who applies to the courts to obtain an enhancement of rents or the recovery of arrears due to him,—the ryot who complains of excessive demands or of illegal distraint,—finds himself hampered, and eventually baffled, by the technical and dilatory procedure which regulates the disposal of these classes of suits. So long as this is the case, it is to be apprehended that the differences will smoulder without being extinguished; that both parties will ordinarily remain quiescent, but that the latent animosity will from time to time break out in acts of violence and outrage. Such, in fact, has been the experience of the past year, two aggravated cases of the murder of zemindars by ryots having occurred—one in Furreedpore and the other in Midnapore. This evil can only be effectually remedied by an amendment of the law; and the Lieutenant-Governor has accordingly expressed his desire of introducing a measure to facilitate the realization of rents by a more speedy and summary procedure than now exists.

Proposed legislation to facilitate the realization of rents.

Relations with Tributary States and Frontier Affairs.

THE current demand for the year on account of land revenue was
COOCH BEHAR. Rs. 9,16,188, against Rs. 8,28,228 in 1875-76, and
Land revenue. an average of Rs. 5,45,869 in the five previous
 years. The greater portion of this increase was
 the result of the new progressive settlement. The maximum demand
 under the new settlement will be reached in the year 1880-81. It will
 amount to Rs. 9,38,969, or treble the demand of 1863-64, when Govern-
 ment assumed the management of the state.

The arrear balances were reduced by more than one-half, and of
 the current demand little more than one-fifth remained uncollected at
 the end of the year. As the new rates were made retrospective, and
 the holders of lands were called upon to pay both the increased current
 demand and the arrears on the increased rates for the past two or three
 years, the result of collections showed that the new rates of rent
 were regarded as fair, and did not press heavily on the people.

The total income of the state during 1876-77 exceeded the expendi-
 ture, leaving at the end of the year a surplus of upwards of 3½ lakhs
 of rupees. In consequence of two items of extraordinary expenditure,
 the expenses of the Rajah's trip to Delhi and those of the ceremony
 of Churakuran, the actual exceeded the estimated expenditure by
 nearly Rs. 8,000. But there was an increase in the receipts under
 almost every head of revenue.

The surplus was chiefly due to unexpected success in the land
 revenue collections. But the receipts under the heads of abkaree,
 stamps, registration, law and justice, education, and miscellaneous also
 exceeded the receipts under those heads in the previous year. The
 increase under abkaree was due, not to increased consumption, but to
 repression of smuggling and to an increase in the collection of license
 fees for the sale of ganja and country spirits.

The early rice crop failed to some extent, but the cold-weather
 crop was a good one. The average price of rice
Crops and the condition of the people. in the town of Cooch Behar was Rs. 2-2, and in
 the interior Rs. 2-2, per maund. These rates, though lower than those
 which ruled last year, were higher than the prices which prevailed
 before the famine year of 1873-74. The yield of tobacco, jute, and
 mustard crops was moderate. Tobacco, which is a very important
 staple of Cooch Behar, was seriously damaged in many parts of the
 state by hail-storms. Owing to a demand in the Calcutta market the

prices of this staple and of jute rose at the end of the year. The mustard crop of the previous year had been a very full one, and in consequence mustard oil sold cheaper during the year than at any time in the preceding eight years.

Public health was on the whole good, and the condition of the people prosperous and progressive.

During the year a larger number of rent suits and other civil suits were instituted than in the previous year, in consequence of the new settlement and the operation of the new Limitation Act.

There was an increase in the total number of all kinds of offences. The establishment of a new thana and outposts to some extent contributed to swell the number of reported cases. There was, however, only one case of dacoity, against seven in 1875-76 and 12 in 1874-75. While the serious offences against property showed a decrease, acts of violence were more numerous than in the preceding year.

The Cooch Behar police force, composed of one superintendent, three inspectors and sub-inspectors, 28 head constables, and 240 constables, was increased during the year by one inspector, one sub-inspector, six head constables, and 46 constables, and one new thana and three new outposts were established.

A new kutchā jail was also built. It was originally contemplated to construct a jail entirely of masonry; but this scheme was abandoned on sanitary grounds, as in the damp climate of Cooch Behar masonry buildings have the tendency to become mouldy and unhealthy. There was a marked improvement in the health of the prisoners. The average number of prisoners in confinement in the sudder jail was 231, against 203 of the preceding year. The average number sick was 8·72, against 12·15. The death-rate was 7·7 per cent., against 8·8 of the previous year. The net cost of each prisoner was Rs. 54, against Rs. 49; and the increase is attributed to the unusual expenditure on account of repairs of jail buildings.

In no department of the state was progress more marked than in that of education. A few years ago there was hardly a school in the Raj. In the past year Cooch Behar was ahead of Rungpore or Julpigoree and of all the Assam districts, and could compare not unfavourably with some of the more advanced districts of Lower Bengal. During the year under review the number of schools increased from 282 to 323, the number of pupils from 7,238 to 7,795, and the average daily attendance from 6,087 to 7,151. The population was estimated at 532,565 souls. Calculating the children of a school-going age at one-twelfth of the entire population, according to the English method, we find that in round numbers one child in every six attended school. Out of five boys sent up from the state to the University Entrance Examination four passed, and two of them won first grade junior scholarships. A scholar from the Raj passed the First Arts Examination for the first time, and another the final examination of the medical school. At the minor scholarship and vernacular scholarship examinations the results were still more gratifying. While there was an increase in the percentage of the school-going population, the quality of

instruction was sound, judged by the standard in British districts. In addition to an English high school in the town of Cooch Behar, a normal school for the purpose of raising a local supply of pundits for the middle class vernacular schools, and schools for primary instruction, there are in Cooch Behar a boarding institution, where the poor relatives of the Rajah are taught, some night schools for husbandmen, and an artisan school for the introduction of new, and the improvement of indigenous, manufactures. There are 185 pathsalas for primary education. The night-schools increased in number during the year from 24 to 29, their pupils from 529 to 693, and their average attendance from 387 to 526. There are 35 female schools, of which 24 only received State aid.

The number of persons who received relief during the year from the charitable dispensaries was 12,143, against 12,758 of the preceding year. This decrease in

attendance was due to the greater healthiness of the year rather than to any decreasing popularity of the dispensary—a conclusion which is confirmed by a comparison of the attendance of the two years at the jail hospital. The diseases most prevalent in the state were fever, enlargement of the spleen, rheumatism, and goitre. The sub-division of Mekligunge, bordering on Julpigoree, is considered the most unhealthy part of the state. The total number of persons vaccinated was 12,093, against 7,825 of the previous year. This large increase, 4,268, is exclusive of re-vaccinations, of which there were 628. Most of these cases were verified by the Civil Surgeon and his assistants. The ratio per cent. of successful operations in the state was 91·2. A charge of one pice is made for each person vaccinated, and the amount is credited to the state.

Improvements were effected in the town of Cooch Behar by the excavation of large tanks and the filling up of noxious cess-pools. A new court-house and a printing office and settlement record-room were completed during the year. A new thana, a dispensary, and a court-house for the Dewan and the Deputy Commissioner, were commenced or were about to be commenced. The central emigration road, 63 miles in length, was nearly completed, and the principal roads in the state were repaired and bridged wherever necessary.

The exports of Cooch Behar, roughly estimated during the year at 6,00,000 maunds, were composed of tobacco, jute, and mustard-seed and mustard-oil. The imports were salt, pulses of different kinds, brass utensils, clothes, and European piece-goods, and were estimated at one lakh of maunds.

The leading feature in the history of the year was a continuance of distress, more or less generally felt among the people. Greater damage even than was caused by the floods of the previous year resulted from the cyclone which passed over the district on the night of the 1st November. There was little loss of life in the storm, as only nine persons are reported to have been killed by the fall of houses; but there was much destruction of property, and the prospects of a harvest which promised to be favourable were injured. One-fourth of

CHITTAGONG HILL
TRACTS.

the standing crop is said to have been destroyed. The outturn of the rice crop was in the head-quarters sub-division five-eighths, and in Sungoo one-half, of a full crop.

The total rainfall of the year at Rangamatia was 114 inches, against 103 in 1875-76 and 80 in 1874-75. At Cox's Bazar 155 inches fell. Arrangements have been made to register the rainfall at Demagiri. Public health was generally bad. Cholera broke out, as is invariably the case under such circumstances, after the cyclone, and though medical assistance was freely made available there was some difficulty in dealing with the outbreak among the hillmen owing to their prejudices and habits. The movements of emigration and immigration among the people were comparatively unimportant. About 500 families are said to have moved into Hill Tipperah, actuated less by the necessity of improving their condition than by a desire to avoid their liabilities to the Moung Rajah. From Cox's Bazar 40 families emigrated; from Sungoo 52 families removed to Arracan. There was some immigration of Bengalis from the plains.

Food was dearer during the year than in 1875-76, the average price of rice being 12 seers 10½ chittacks for the rupee, against 14 seers 3 chittacks. The cyclone does not appear to have materially affected prices. Rice was dear during the month immediately preceding the storm, but in January the price was the same as in the corresponding month of the previous year.

The trade returns show great fluctuations. The exports rose from 64,874 maunds in 1875-76 to 83,740 maunds in 1876-77. The imports were 57,434 maunds, against 44,460. In cotton export the Kurnafulee river showed an increase of 50 per cent., while the Fenny showed a considerable decrease. From the Sungoo sub-division 14,000 maunds were exported, against 9,621 maunds in the previous year. The falling off in the export of India-rubber was attributed to distrust arising from fraudulent practices among the suppliers, and to misconduct on the part of the traders. One example has been made, and the trade has become much more active since the close of the year.

There was no raid on our territories during the year. A durbar was held at Demagiri in January last, at which no less than 31 of the transfrontier Chiefs were present; and the Deputy Commissioner took this opportunity of proclaiming the boundary line of British territory, and of informing the Chiefs that Government would afford full protection to all traders within our boundary, and would punish all persons guilty of offences of violence within the same limits. The effects of the recent proclamation have already been felt in a considerable

Durbar at Demagiri
state of the frontier.

stimulus to trade with the tribes across the frontier. There was no fighting during the year among our immediate neighbours. Since the close of the year rumours of possible hostilities have led to the establishment of a regular patrol along the line; but up to the present there has been no demonstration, and it is probable that the villages inside our border will be safe from aggression. The attention of the Rajah of Hill Tipperah has recently been drawn to the necessity of providing efficient protection to the border villages of his state; and action is being taken in the matter.

The gross strength of the frontier police force employed during the year was 467. The men were placed it under a military officer. during the year employed on the additional duty of visiting the frontier villages to collect information. The discipline of the force was excellent throughout. The cost of the Commissariat was only Rs. 27,767, against Rs. 34,624 in the previous year. The decrease was chiefly owing to the judicious arrangements made by the Deputy Commissioner. The civil police force consisted of 115 men. They worked well, but the number of cases in which punishments were inflicted was large.

Only 167 cognizable and non-cognizable cases were reported during the year. The arrests made were generally judicious, and 246 persons out of 457 brought to trial (or 64·66 per cent.) were convicted.

Civil and criminal justice.

Civil litigation is unfortunately largely on the increase. The number of cases instituted was 2,998 in 1875-76 and 3,065 in 1876-77. The average of the five years ending with 1875-76 was only 679. The number of cases disposed of during the year was 2,854. The Lieutenant-Governor has expressed a hope that local officers will do all they can to discourage vexatious litigation, and that they will not too rapidly introduce the practice and forms of regulation procedure, which are at present quite unsuited to the general circumstances of the Hill Tracts.

The revenue demand of the year, exclusive of the large outstanding balance, chiefly on account of the purchase money of waste land lots, was Rs. 1,07,341, against Rs. 1,20,942 in the previous year, and the collections, including outstandings, amounted to Rs. 1,21,130, against Rs. 1,25,937. The falling off in the demand is more than accounted for under the subhead of "tolls on rivers." The decrease in the collections corresponds with that in the demand on this head. There was also a falling off in the collections of the "capitation tax," owing to the prevalent distress. The estimated expenditure of the year was Rs. 2,02,984.

Altogether 6,078 acres have been leased out for the purpose of plough cultivation to 38 persons for terms varying from five to thirty years at an annual rental of Rs. 1,071. The Lieutenant-Governor has for the present allowed a further extension of one year to enable the people to make their preparations for the introduction of the revenue circles system.

The expenditure on public works amounted to Rs. 10,324, against available resources amounting to Rs. 21,179. There were eight schools open during the year.

Public works.

against nine during the previous year. The number of pupils was uniform,—153. Pressure is required to keep up the attendance of pupils, and it is much interrupted in the jooming season. More readiness is shown to take advantage of the three hospitals in the district. During the year 1,437 in-door and 1,600 out-door patients were treated.

Education.

Conduct of Chiefs.

The Chuckma Chief and the MOUNG RAJAH were reported to have behaved well, and to have exerted themselves creditably to relieve the distress of their people. Less favourable reports were made of the conduct of the Bohmong and other Chiefs in the Sungoo sub-division.

HILL TIPPERAH.

Dismissal of the Dewan.

The principal event of the year in Hill Tipperah was the dismissal of the Dewan of the state, Baboo Nilmoni Das. It was found that the Dewan had behaved badly in many ways, extorting money from the Rajah, conniving at dishonesty and rapacity on the part of the subordinate officials, and thwarting his master in his efforts to improve the administration of his state and the management of his estates in British territory. There can be no doubt that the Dewan presumed upon the influence which he derived from the fact that he was formerly in the employment of this Government, and that his malpractices would have sooner come to light had not the Rajah felt some delicacy in complaining against him.

Expenditure.

The Rajah still continues his efforts to reduce his personal expenditure, so as to provide a margin for administrative improvement. During the year the marriage ceremonies of his children made a heavy call upon his purse. Advantage, however, was taken of the occasion to make the single ceremony serve for the marriage of eight of his children. The gross receipts from sources within the state itself, exclusive of the collections from the Rajah's estates in British territory, are given for the past three years as—1874-75, Rs. 1,90,897; 1875-76, Rs. 2,13,470; and 1876-77, Rs. 1,82,632. The increase in the productiveness of the tax on forest produce was satisfactorily explained in the last report. The buffalo and grass mehals are quite unobjectionable, and the revenue derived from them is expanding rapidly. The tax on mustard-seed has apparently been abandoned, as no collections under it seem to have been made during the year. The very objectionable imposts on parrots, gurjun oil, sweetmeats, spinning-wheels, saffron, and fishing amounted only to Rs. 182. This, of course, represents only the amount paid for the farm of the taxes by the lessees, and is no measure of the contributions made, and hardships suffered, by the people. Mr. Bolton has been directed to lose no opportunity of impressing upon the Rajah the obnoxious character of these imposts and the viciousness of the system under which they are collected. The Lieutenant-Governor has impressed upon the Rajah that a ruler can take few steps more prejudicial to the interests of his people and to the popularity of his own rule than to sell the collection of taxes and the concomitant power to harass and annoy his subjects to practically irresponsible persons.

The administration of justice gave general satisfaction, and the Rajah was able to strengthen the judiciary by the appointment of three young Thakurs

Civil and criminal justice.

as assistants in the courts. The reported crime of the year was represented by 541 cases instituted, against 567 in the previous 12 months. British subjects were concerned in 138 cases, against 118 cases in 1875-76 and 41 in 1874-75. The causes of the recent general increase in these cases are, briefly, the establishment of new thanas near the borders of British territory; increased vigilance in enforcing payment of forest dues; and the transfer to the Rajah's courts of cases formerly tried by the Political Agent. Only 284 civil cases were instituted, against 333 in the previous year.

The prospects of education in Hill Tipperah are not bright: only 186 pupils now attend six schools, against 173 attending four schools in the previous year.

Education.

The hope that the excellent example of the Joobraj would induce many of the young Thakurs to apply themselves to study has not been fulfilled. The Prince continues to take an intelligent interest in education and in the administration of the state.

The question of the arrangements to be made for the protection of the frontier, and for establishing communications with the Chittagong Hill Tracts force, was under consideration at the close of the year.

Frontier posts.

TRIBUTARY MEHALS OF ORISSA.

The report for the year was a record of continued progress and good management in the majority of the states.

The fiscal condition of the two Government estates of Ungool and Banki was very satisfactory. The whole of the Government demand was discharged, and considerable payments on account of the current year were made in advance. In Bamunghatty estate the collections were made without difficulty, and a handsome sum as net profits was handed over to the Maharajah of Mohurbhunj. The management of these three estates was very creditable to the local agency, and the peasantry are prosperous and contented. The tribute demandable from the different states was, as usual, paid up punctually.

Revenue.

Khond Mals.

There is no land assessment in the Khond Mals, but the people have taxed themselves with two cesses,—one on spirit-shops, the proceeds of which are, at their own request, applied to maintaining schools; the other on ploughs, of which the collections, with an equivalent contribution from Government, are applied to the construction of roads. The shop tax produced Rs. 2,410, which, with a small sum for fines and sale proceeds of confiscated articles, actually exceeded the amount expended. The experiment has been sufficiently successful to justify hopes of still better results being attained. The average attendance at each of the sixteen schools now open was nearly 36, and small rewards were earned for regular attendance. The proceeds of the plough tax, with the balance of the preceding year, amounted to Rs. 5,439.

The civil and revenue work was executed with efficiency and despatch. There were altogether 2,090 cases on the files, and of these 1,979 were disposed of.

Civil and criminal justice.

The three estates of Ungool, Banki, and Bamunghatty, accounted for 1,791 out of 1,945 cases instituted. The balance represented complaints

from tributary states in which persons were dissatisfied with the Rajahs' decisions ; and the small number instituted, notwithstanding the progress of land settlements in many of them, bore satisfactory testimony to the general fairness of the proceedings of the Chiefs. Nearly one-third of all the cases instituted were suits relating to debt. Cases of this class largely preponderated in the small estate of Banki, where no less than 411 were brought forward. Indeed civil litigation under all heads is nearly twice as common in Banki as in Ungool, owing, no doubt, to its comparative populousness and its proximity to the regulation tracts.

As in the previous year, there was little serious crime. Four murders and 11 cases of culpable homicide occurred.

Mr. Ravenshaw was unable to do as much as usual in the way of inspection, important business requiring his presence at Cuttack and Pooree during the greater part of the touring season. Dhenkanal and Athgurh were the only states visited by him.

With rare exceptions, the conduct of the Chiefs was good. The Maharajahs of Mohurbhunj and Keonjhur continued to uphold the character for public liberality and enlightened administration, which has won for them the approval of Government, and which has found its fitting reward in the title of Maharajah recently conferred upon them. The Lieutenant-Governor was deeply grieved at the intelligence of the death of the Maharajah of Dhenkanal in February last, and His Excellency the Viceroy expressed his regret also at the Maharajah's loss. The Maharajah always enjoyed the confidence of Government and the love and respect of his subjects, and in the course of a long and enlightened rule he did much for the permanent prosperity of his estate. He was succeeded by his adopted son ; and Baboo Bonomali Singh, an educated and experienced gentleman, who had already given much satisfaction as Dewan of the state, was appointed guardian of the minor prince. The Rajahs of Pal Lehara, Athgurh, and Nursingpore, maintained their reputation as just and intelligent rulers. The Rajah of Athmullick, who was greatly beloved by his people and esteemed by Government, died during the year. He was succeeded by his son, an intelligent and well-educated youth, who had for some years assisted his father in the management of the state. Unfavourable reports were again received of the Rajahs of Nilgiri and Baramba. In Talchere there was no improvement. The continued misconduct of the Rajah of Duspulla, which had been frequently brought to the notice of Government, formed the subject of a special report, on which orders were passed during the current year.

The late Commissioner was unable to visit any of the tributary states during the last cold season. The great importance which the Lieutenant-Governor attaches to these visits has been strongly impressed upon the Commissioner.

In Sirgoojah, Oodeypore, and Chang Bhukhar the rainfall was sufficient and well distributed, and the outturn of the different crops was excellent. Jushpore suffered

TRIBUTARY STATES ON

FRONTIER.

Tours.

Rainfall.—Crops.

slightly from an early cessation of the rains; while in Bonai and Gangpore some trifling damage was done by heavy rainfall at the close of the year.

The tribute of each state was paid in full, and the conduct of the Rajahs was good on the whole. The young

Conduct of the Chiefs.

Chief of Korea was a little wild at first, but he has since settled down. The Deputy Commissioner of Singbhoom visited the petty states of Seraikella and Khursawan, and was satisfied with what he saw. The Chiefs, however, are reported to take little concern in education. The Deputy Commissioner has been desired to make it a point of visiting these states at least once a year for the purpose of advising the Chiefs how to carry on their administration for the mutual benefit of themselves and their people.

The public health is said to have been generally good. Vaccinators were sent into some of the states, and the manager of the Sirgoojah estate applied for the services of an inspector to look after the vaccinators. There was an outbreak of cattle disease in Gangpore. The Chief adopted the remedies prescribed in a recent pamphlet on the subject, and the result was satisfactory.

Public health.—Vaccination.

Education is in a very elementary stage. There seem to be two prime obstacles,—the disinclination of the people to learn, much less to pay for learning; and the difficulty of procuring efficient teachers. In Sirgoojah there are nine schools, where instruction in Hindi and Persian is imparted to between 60 and 70 boys. There are two free schools in Jushpore, supported by the Chief. Oodeypore, Gangpore, and Bonai, have one school each. There are no schools in Korea or Chang Bhukhar.

Education.

Sirgoojah, which is managed under the general supervision of the Commissioner, is the only state regarding which any particulars of income or expenditure can be given. The income of the past year was Rs. 32,758, against Rs. 29,867 in the preceding. The increase was chiefly caused by improved collections of the grazing duty and of the taxes on fruit and lac-trees, and by a revision of the excise revenue on the resettlement of a part of the estate. The total expenditure amounted to Rs. 23,231. The invested surplus to the credit of the estate amounts to Rs. 20,115-14-10.

Sirgoojah.

Of cases directly instituted there were 35 pending at the beginning of the year. During the year 23 were instituted and only 18 were disposed off. The number pending at the close of the year was therefore 40. As regards appeals from the decisions of the Chiefs, it appears that there were 13 cases pending at the opening of the year before last. Three were instituted during that year, and four were decided. The balance at the beginning of the past year therefore stood at 12. Two were instituted during the year, one was decided, and 13 were pending at the close of the year. The Lieutenant-Governor has drawn the attention of the Commissioner to the necessity of disposing promptly of cases of this class.

Altogether 644 offences were reported and 1,221 persons were arrested, against 487 and 980 in the previous year.

however, that 125 cases and 278 persons belong to Seraikella and Khursawan, of which the returns have this year for the first time been amalgamated with those of the other states. There were five murders, six culpable homicides, and one dacoity, against five murders, five culpable homicides, and three dacoities in the previous year. The dacoity was really a case of theft of cattle from the grazing field, which fell technically under the former designation. The crimes of violence chiefly resulted from intrigues or intemperance. One, however, was a very atrocious case of torture committed in Sirgoojah by a head constable and two constables of the Mirzapore police. Two of the offenders were sentenced to rigorous imprisonment for ten years each.

In the Tributary States proper there were 85 suits pending at the beginning of the year, and 209 were instituted during the year. Of these 180 were decided and 114 were pending at the close of the year. Thirty-four of the cases which were before the courts during the year were for execution of decrees, and of these only 13 were decided. In Seraikella and Khursawan, which are situated within the district of Singbhoom, 22 civil suits and 23 suits for execution of decrees were pending at the close of the year. The institutions numbered 108 in civil and 92 in execution cases; and of the former 117, and of the latter 94, were decided.

Litigation of all descriptions was rife in Gangpore, and the judicial administration of the Rajah was perhaps more vigorous than discreet. This small state contributed nearly half of the criminal, and considerably more than half of the civil, cases in the Tributary States proper. Of 318 persons fined 209 came from Gangpore, and Rs. 1,493 out of a total of Rs. 3,186 represent fines inflicted by this Chief. Less than half of this sum was realized. The Commissioner was directed to suggest to the Rajah to consider how far this encouragement of petty litigation is to the advantage of his people.

II.—ADMINISTRATION OF THE LAND.

Surveys.

Professional. STATEMENT E. 1 in the Appendix to this report, prepared and furnished by the Superintendent of Revenue Surveys, Lower Circle, shows the quantity of work which was estimated as likely to be completed by the professional parties within the survey year ending 30th September 1877. The figures given, therefore, are approximate only. The aggregate area which this department expected to accomplish was 4,145 square miles, giving an average cost of Rs. 109-15-3. This was inclusive of the survey of the Dhanwar and Chota Nagpore wards' estates, in the districts of Hazareebagh and Lohardugga, the cost of which is to be borne by those estates.

Non-professional. Statement E. 2 of the Appendix exhibits the work performed by the non-professional parties during the official year from the 1st of April 1876 to 31st March 1877.

Midnapore survey. In the district of Midnapore fifty villages in the tract called Nibar Jangal, covering an area of about 26 square miles, which was formerly omitted from the survey, were demarcated during the year under report, and the demarcation of the district was brought to a close. The number of thakbust maps made over to the revenue surveyor was 275, against 2,686 in the previous year. The number of boundary dispute cases decided during the year was 44, against 158 in the preceding year. The number of other descriptions of cases disposed of was 666, against 766 in the previous year; while the number of duplicate maps prepared was 115, against 3,030 shown in the return for 1875-76. In addition to the above, the survey establishment was employed in renewing temporary marks in 256 hulkas and erecting 671 trijunction stones and 216 masonry pillars on selected points. In cases connected with missing lands the measurement of some 605 chucks was completed. Much miscellaneous office work was also done in the way of preparing lists of the papers in the records, copying maps prepared in the settlement office and by the irrigation cadastral survey ameens, renewing damaged maps, &c. The expenditure incurred during the year was Rs. 34,667, against Rs. 51,886 in the previous year. This difference was due to the transfer of Baboo Bissessur Banerjee, Deputy Collector, to the Hooghly Survey Office. No fair comparison can be made between the outturn of this and the previous year's work. During 1875-76 the

area demarcated (chiefly pergunnahs) was 1,610 square miles, while in the year under report, owing to the termination of work, 26 miles only were demarcated. Out of the total expenditure of Rs. 34,667, Rs. 20,735, or upwards of one-half, was absorbed by the salary and travelling allowance of the Superintendent and Deputy Collector.

More progress was made in the compilation of the survey registers of the Hooghly district in the year under report than in the previous year. Six village and six estate registers in the vernacular were completed

during the year, against three village and four estate registers in 1875-76. Registers of other pergunnahs were also compiled, but have not been shown as completed, as lands appertaining thereto may hereafter be found in the pergunnahs situated in the Burdwan district, in which case alterations will be necessary in the areas computed. The compilation of some, at least, of the Hooghly survey registers will be deferred until the inquiries connected with the surplus and missing lands of the interlacing pergunnahs of these two districts have been finished. The number of miscellaneous cases disposed of during the year was 2,289, against 2,354 in the preceding year. The estimated expenditure during the year was Rs. 14,761, against Rs. 11,496 incurred in the previous year.

Mr. Taylor was in charge of the Khoordah estate survey as Settlement Officer and Superintendent of Survey throughout the year. Baboo Bhagbut Mahanty joined as Special Deputy Collector on the 7th April 1876. Baboo Rashbehary Nayak, Sub-Deputy Collector, joined on 1st May 1876, and Mr. C. Brownfield, Revenue Surveyor on special duty, joined on 14th December 1876. Eight hundred and thirteen villages were demarcated and made over for survey. Out of this number 536 were professionally surveyed, of which 198 were measured field by field; 277 remain for professional survey, and 615 for cadastral survey, next season. The demarcation work was therefore considerably in advance of survey requirements. Most of the Khoordah surburakaris are held jointly by two or more surburakars. As this joint system has proved very inconvenient, and has been the source of much confusion and trouble, it was decided that during the present settlement surburakaris must cease to be held in joint tenancy. The lands, too, of a great number of mehals were interlaced, and some surburakaris were formed of detached lands situated in several villages at a distance from each other. It was necessary therefore to form entirely new villages by dividing the previous mehals into convenient sized blocks, so as to provide separate villages for all joint surburakars, and by an exchange of lands to get rid, as far as possible, of scattered and mixed mehals. In forming the villages care was taken to divide tanks, waterways, jungle, grazing grounds, and fruit-trees as equally as possible, so that the ryots of each village might have a fair share of fruit, fish, wood, water, and grazing land. The natural features of the country were utilized as far as practicable in adjusting the new boundaries. In marking the boundaries laterite and sandstone pillars were used for all trijunction points of villages. Every theodolite station on the boundaries of villages, and all the intermediate bends, corners of paddy-fields, &c., were marked

with stones. As soon as the surveys are completed all these stones, which are firmly imbedded in the earth, will be further protected by mounds of earth to prevent their being broken or removed. About 50,000 cut stones were placed as boundary marks, besides uncut lumps and marks cut on rocks, of which no account is kept.

The Dearah survey of the riparian lands of the river Megna in the districts of Furreedpore and Dacca was carried out entirely by the professional party. A civil Deputy Collector was attached to the survey, but his work was solely that of settlement, though in demarcating boundaries of the excess lands he often had to make a survey of the adjoining lands, such surveys forming part of the settlement work and not being shown separately. Besides the settlement of the Dearahs under Act IX of 1847, the Deputy Collector was entrusted with the regular settlement of the large Kalkini estates in the Furreedpore district and of khas mehal Bachamara in Dacca. He had also to make certain measurements with reference to inquiries regarding the reformation of certain diluviated Government estates in the district of Furreedpore. About 27,000 beeghas, or 9,000 acres, are estimated to have been measured in the Dacca district, and about 114,000 beeghas, or 38,000 acres, in the district of Furreedpore. Thus the total quantity measured in both districts is estimated to be from 45,000 to 50,000 acres, or (say) 75 square miles. It is impossible at present to estimate correctly the increase of revenue to Government from the past season's operations, but it is expected to amount to Rs. 20,000 or Rs. 25,000. Against this increase is to be set the decrease to be allowed for diluvion. This has not been ascertained yet, but the amount will probably be from Rs. 4,000 to Rs. 5,000.

Settlements.

THE total number of settlements effected in Bengal, exclusive of the Sonthal Pergunnahs, during the year was 845, of which 67 were original settlements, 340 were re-settlements, and 438 were summary settlements. The net increase of Government revenue amounted to Rs. 68,321. The number of settlements remaining for disposal at the end of the year was 1,927, and the net revenue expected from these was Rs. 9,00,508. The principal settlements were in the districts of Chittagong, Pooree, Midnapore, and Backergunge, those in the first named district being the most important.

In the district of Chittagong the measurement work was completed during the year in 89 villages, comprising 1,38,793 plots, covering 1,07,406 acres; the corresponding figures during the previous year's operations being 122 villages, 65,112 plots, and 28,625 acres. Forty-six original settlements and 27 re-settlements were effected on a yearly revenue of Rs. 1,397, against a former demand of Rs. 111, thus producing an additional revenue of Rs. 1,286. This increase, however, was not due so much to an enhanced rate of assessment as to the fact that a great proportion of the land included in these operations had not previously borne any jumma at all. As regards such lands, the rule has been laid down that settlers who might have laid out money in reclaiming them, though not possessing any valid title to the lands, should be dealt with in a liberal and conciliatory spirit. The entire cost of the settlement operations in Chittagong, including that of supervision, office establishment, and contingencies, amounted to Rs. 40,105, while the total expenditure laid out from the commencement of operations in October 1875 was about Rs. 60,986. The settlement of the island of Kootubdea in Chittagong is still incomplete. Of the 2,500 acres reclaimed during the year, more than half has been settled at a rental of about Rs. 6,337. The question of constructing embankments for the reclamation of the island is still under the consideration of Government. The re-survey of the island of Moiskhal in Chittagong, mentioned in last year's Report, has not been concluded, 33,666 acres out of a total of 48,017 having been measured. The unassessed area, including hills, is estimated at 15,376 acres. Adjoining Moiskhal is another island, Martaban, in which Government appears to have been wrongfully deprived of two considerable clearings with habitations on them, which are liable to assessment, but for which no rent has hitherto been paid. These lands will be surveyed as soon as the inquiry regarding Moiskhal shall have been completed.

Poores. In Pooree the work consisted of the re-settlement of the important Government estate of Khoordah. A cadastral survey is being simultaneously carried out. The demarcation and settlement parties produced a fair outturn of work. Eight hundred and thirteen villages were demarcated up to the close of 1876-77 and handed over ready for survey. Of these 536 were surveyed professionally, and 198, comprising 307,371 fields, were measured field by field; 892 villages remain for survey. Demarcation work is considerably in advance of survey requirements, and it is expected that actual settlements will be rapidly pushed on in the season of 1877-78. The Khoordah settlement has cost up to the close of 1876-77 Rs. 36,253. The operations have been somewhat expensive, but it is expected that the Government revenue will be largely increased.

Midnapore. In Midnapore the settlement officer has been employed in the assessment of the two large estates of Jellamoota and Majnamoota, which are temporarily settled estates not the property of Government. These two settlements have been completed since the close of the year, but the ryots have not accepted the enhanced rates, and the final confirmation of the settlements is still under consideration. The unsatisfactory state of the law, as recently interpreted by the courts, regarding the power of a settlement officer to determine rates of rent, has been the subject of discussion. It appears reasonable that the powers of a settlement officer to enhance rents should be the same as the powers conferred on a proprietor under the ordinary rent law. In other words, he should not enhance except upon grounds upon which the law would allow a landlord to enhance. But rates of rent which have been fixed by a settlement officer on these principles and approved by the superior revenue authorities should be presumed by the civil court to be correct until the contrary is shown in a regular suit. The Government of India have lately sanctioned the introduction of a legislative measure embodying these principles.

Backergunge. In Backergunge a re-settlement of the valuable Government estate of Tooskhali was brought to a close in February 1877 by the Soonderbuns Commissioner, with a net annual increase of revenue amounting to Rs. 24,543. This result, combined with the fact that there has not been a single appeal against the Commissioner's proceedings, is extremely satisfactory.

Miscellaneous. In Cuttack there were no original settlements during this year, but three estates came under re-settlement, the largest and most important of these being the Government estate commonly known as Bazarhai Buldeo, or the town of Cuttack, a re-settlement of which was effected with a net increase of revenue from Rs. 2,551 to Rs. 10,608, being an increase of Rs. 8,087 per annum. In Lohardugga the settlement of the large confiscated estate of Burkagurh was taken in hand, but the progress-made was slow, and the survey of the estate has since been transferred to a professional party. The settlement work in other parts of Bengal calls for no special remarks; but it may be observed generally that on the whole the settlement operations of the year have been fairly successful, and have resulted in a substantial increase of revenue without pressing inequitably upon any class of cultivators or proprietors.

The work in connection with the settlement of the Sonthal Pergunnahs has grown as the operations proceeded. Fresh difficulties have arisen, or further inquiries have from time to time been found necessary; and now, again, at the close of another year's operations, it has to be recorded that there were still on the 30th June 1877 942 villages remaining for settlement, besides a good deal of important detail in connection with villages in which the rates and rental have been nominally fixed. But though the detailed ryotwari settlement found to be necessary in the Bengali villages lying in the pergunnahs, and the special difficulties which cropped up in Deoghur, have combined to prevent an early completion of the work, the outturn of the year is in itself creditable, the returns showing that the settlement officer settled himself 1,310 villages, besides revising the settlements of 225 and examining and confirming the work of his deputy in 1,591. There seems now to be good ground for believing that all will be finished during the field season of 1877-78. The settlement work done during the year was conducted on the principles laid down in the orders of Government and explained in former reports. As far as possible, existing rents have been maintained. It would appear that the settlement officer's gross jumma came to Rs. 1,31,949, against a nominal jumma of Rs. 1,13,734 paid to the zemindars, and of Rs. 1,20,434 collected by the mustajirs. In many instances throughout this settlement what appears an increase arises merely from the inclusion in the settlement of lands held nij-jote by the mustajirs; and the actual realizations from the ryots by this class of farmers were frequently much greater than the jumma shown in the returns. That the settlement will be a boon to the ryots cannot be doubted, looking to the manner in which landlords and farmers, both Native and European, were wont to run up the rents on short leases and to exact illegal cesses. On the other hand, the settlement will benefit the zemindars by giving them an assured income and preventing that system of making over their lands to money-lenders which is shown to have deprived so many of the old ghatwals of all property in their ancestral holdings.

Government Estates.

THE most important Government estates in Bengal are the Damin-i-koh in the Sonthal Pergunnahs, the Western Dooars in Julpigoree, the greater part of Palamow in Lohardugga, the Kolhan in Singbhoom, the Khoordah estate in Pooree, and the Tooshkhalli estate in Backergunge.

The total number of Government estates on the revenue roll during the year 1876-77 was 2,459, including 27 estates classed as ryotwaree tracts. The current revenue demand amounted to Rs. 20,20,529, and the arrear demand on account of former years to Rs. 7,88,429, making a total demand for the year of Rs. 28,08,958. The collections of the current demand were Rs. 14,74,454, and of the arrear demand Rs. 5,35,802, while Rs. 60,526 were remitted as irrecoverable. The uncollected balances of the current and arrear demands together were Rs. 7,38,176, being 17·12 per cent. of the demand in ryotwaree tracts and 28·71 in other Government estates. An opinion was expressed in the Administration Report of last year that the realizations of revenue in Government estates might reasonably be expected to amount to 90 per cent. of the demand. This standard, however, was reached in only 9 districts, the best results being attained in the Orissa Division. In 9 districts the collections fell below 50 per cent. of the demand, and in two of these (Noakholly and Mozufferpore) they amounted to only 21 and 20 per cent. respectively. In some of the south-eastern districts the impoverished state of the people, consequent upon the destruction of property in the cyclone, made it impossible to press the tenantry for payment; but in other districts, in which this excuse could not be pleaded, the large amount of the balances could only be attributed to a want of care and vigilance on the part of the officers concerned. The attention of District Collectors was again called to the subject, and they were reminded that the punctual collection of rents under a system of direct management was one of the surest tests of that administrative ability which might be fairly looked for in a district officer. In all Government estates, whether farmed or held khas, the rents are fixed at moderate amounts, and the ryots are protected from all exactions in excess of the fixed assessment; and under these conditions better results ought to be achieved than were attained in the great majority of districts during the year under review. The successful management in some few districts, in Cuttack and Balasore, in Julpigoree and Darjeeling, showed that the Government was not unreasonable in demanding a much higher general standard. The instance of the Tooshkhalli estate in Backergunge appeared to show that the alleged difficulties of direct

management could be overcome by firm and judicious administration. This estate had recently been taken under direct charge, it had just been re-settled at an enhanced rental, and the ryots were well known as an excitable and somewhat turbulent body of men, nevertheless the entire demand of the estate was realized—a result which reflects much credit on the officer in charge of the collections.

In addition to the above-mentioned estates, which are the property of Government, a considerable number of estates belonging to private persons were under the charge of the officers of Government during the year. The total number of estates under the direct management of district officers was 8,241. The charges of management were moderate, amounting only to 6·3 per cent. on the collections. Of the estates not belonging to Government, the most important was the large estate of Majnamoota, in Midnapore, which was taken in charge in consequence of the default of the proprietors to pay the land revenue. The management presented unusual difficulties; but fair progress was made with the collection of the arrears which were due when the property was taken in charge, and the apparent deficiency in the amount of current collections was explained by the fact that about one-fourth of the nominal demand was not actually due within the official year, the accounts of the estate being made up according to the Umlee year.

The sales of Government estates during the year consisted only of some petty holdings in Calcutta, and of a few plots of railway lands which were no longer required. Detailed proposals, however, were made in the course of the year to the Government of India for the sale of a considerable number of estates which from their position or their size did not admit of being profitably retained under Government management. Since the close of the year sanction to the sale of these estates has been received.

Wards' Estates.

As was explained in the Administration Report for last year, the Board's report on the administration of wards' and attached estates is usually received too late for incorporation in the general Administration Report of Bengal. The information, therefore, now furnished on the subject relates to 1875-76, the year 1874-75 having been dealt with in last year's report.

There were altogether 464 estates under the charge of the revenue authorities during the year 1875-76, as shown in the following table:—

	Burd- wan.	Presi- dency.	Rajshahye and Cooch Behar.	Dacca.	Chitta- gong.	Patna.	Bhagul- pore.	Orissa.	Chota Nag- pore.	Total.
Wards' estates	8	17	21	17	6	24	6	9	10	118
Attached "	5	12	1	1	326	345
Total ...	8	22	21	29	6	24	7	10	336	463

The Sydupore trust estate in Jessore completed the total of 464 estates. Of this number no less than 326 were estates sequestered for debt in the Chota Nagpore Division.

The total demand of rent of all the estates for which returns were received is Rs. 1,58,04,715, of which Rs. 69,78,132 represented the current demand and Rs. 88,26,583 the arrear demand due on account of previous years. The total collections during the year were Rs. 62,74,409, or only 39 per cent. of the total demand. The current Government revenue due from the estates was Rs. 27,69,956, of which Rs. 24,18,426 were paid. The following statement for all estates under charge of the revenue authorities shows these results in detail Division by Division:—

	Burd- wan.	Presi- dency.	Raj- shahye.	Dacca.	Chitta- gong.	Patna.	Bhagul- pore.	Orissa.	Chota Nag- pore.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

The amount of arrear rents was large in all Divisions. The reason of this was that when the Court of Wards assumes charge of an estate it usually finds that there are large arrear balances which are unrealizable and swell the balance of outstanding accounts until they are finally written off. But under any circumstances the amount of arrears of rent must always appear considerable, as the whole of the current demand is not realizable within the year, and this balance must be carried forward as an arrear of rent. The result of total collections during the year was unsatisfactory as compared with the total demand of rent, but the proportion was better than in the previous year, and contrasted not unfavourably with the total of the current demand for the year.

In the Burdwan Division the arrears were chiefly on account of the Chuckdighee estate. In this estate it was found necessary to remit Rs. 99,225 of the arrears, and the greater part of the remainder, amounting to Rs. 89,000, will, it is hoped, be realized. This estate was unfortunately weighed down by several heavy lawsuits, which were not decided within the year.

The arrears of uncollected rent were heaviest in the Presidency Division, where they amounted to more than 42 lakhs of rupees. In the Satkhira estate alone more than 33 lakhs of rupees are in arrears. Of this sum Rs. 13,50,280 were remitted during the year as being wholly unrealizable. This estate was greatly involved in debt. It came under the charge of the Court in 1872, with a rent-roll of less than 3½ lakhs and outstanding balances of more than 60 lakhs of rupees. Out of a total debt of Rs. 8,41,055, Rs. 5,16,039 were paid off during the year and Rs. 931 reduced by compromise, so that the balance of debt was reduced to 3½ lakhs. Paikpara, the largest estate in this Division, continued to prosper under the efficient management of Mr. Harvey. The total sum invested on account of this estate was Rs. 23,00,308, of which 4 lakhs were invested during the year. The collections were satisfactory. The actual expenditure from the estate on charitable purposes amounted to Rs. 18,354 during the year, of which Rs. 8,554 were for schools and Rs. 2,300 for dispensaries. The management of the estate of the Maharajah of Nuddea was also satisfactory. The estate was freed from debt and showed a small cash balance at the end of the year of Rs. 12,935. The Nuldanga estate, in Jessore, was efficiently managed. No returns were furnished for the Narail estate. One-sixth share of the whole of the Narail property belongs to the minors, and was therefore under the Court of Wards. The arrear balances were very large, amounting to more than 5 lakhs of rupees, and were mostly irrecoverable. It appeared also that only 65 per cent. of the current demand was realized during the year. The estate had Government securities for Rs. 35,916 at the close of 1874-75; but more than half of these had since been sold off to meet decrees, and there was a considerable claim against the estate still undisposed of. In the Moorshedabad district serious mismanagement was disclosed, and defalcations were brought to light. The collections in the Nushipore estate, the largest in the district, were very unsatisfactory. As regards the management of the Court of Wards' estates in the Rajshahye and Cooch Behar

Division, no special remarks are called for: it was noted that most of the lesser estates were indebted. The management of the two larger estates of Chanchal, in Maldah, and Chucklajat, in Julpigoree, was efficiently controlled, and the former estate showed a sum of more than three lakhs of rupees invested in Government securities. A measurement and re-settlement of the Chucklajat properties, which are the possessions of the minor Maharajah of Cooch Behar within British territories, and extend over parts of three districts, was in progress during the year.

The estate of Jogut Kishore Acharjee, in the Mymensingh district,

Dacca Division.

affords a fair illustration of the state of things to which too many estates are unfortunately reduced before they come under the Court of Wards. The late proprietor died in November 1875, and the estate was taken charge of by the Court on the 8th January 1876. The accounts were found to be in utter confusion, and it was impossible to furnish a clear statement of the revenue payable or of the collections due. The current demand of rent was said to be Rs. 68,000, but it probably exceeded this. On the other hand, the estate was heavily encumbered. The precise amount of the debts was not ascertained, but they were estimated to amount to from eight to ten lakhs of rupees. Efforts were made to reduce this debt, but it was evident that the difficulties in the way of the Court are great, and that in such a case as this but little can be undertaken for the improvement of the tenants of the estate. It is hoped, however, that it may still be found possible to clear this estate from debt, as has been done in regard to other estates equally involved, which after the close of the wards' minority have been handed over to their proprietors in a solvent condition.

The Durbhunga estate in Behar, which is far the largest wards'

Durbhunga estate.

estate in these provinces, came under the Court of Wards in 1860 with very heavy debts and in much disorder. The whole of the debts have long since been paid off, and at the close of the year 1875-76 the estate had, after meeting a heavy and unforeseen expenditure, a balance of Rs. 18,78,579 invested in securities. The rainfall during the latter part of the year was scanty, and scarcity was apprehended; and it was found necessary to organise relief works over a great part of the area of the estate. These relief operations extended from February to September 1876, and involved a total expenditure of Rs. 52,736 on account of charitable relief and Rs. 83,701 on account of relief works. Large realizations were also foregone. Out of a total current demand of rent amounting to Rs. 21,20,499 only Rs. 6,26,489 were recovered, and of the arrear demand of Rs. 22,30,976 only Rs. 10,12,386 were recovered; Rs. 4,06,012 of arrear rent were remitted. Thus the administration of this estate during the year was marked with extreme leniency to the tenantry. A large sum, amounting to more than twelve and a half lakhs of rupees, was expended by the engineer of the estate upon public works. The report of Major Money, the manager of the estate, sufficiently showed the impoverished condition of the people, and evidenced the obligation that the Court of Wards lay under as a just and liberal landlord to assist the tenantry and relieve them from liabilities which had been incurred over a series

of years, and which on account of their own poverty and the recurrence of bad seasons and indifferent harvests they were unable to discharge without assistance. A special officer was appointed in the Durbhunga estate, on the ground that a re-settlement of holdings and a revision of rents would be necessary in those parts of the estate which had suffered from scarcity. The collecting establishment has been entirely re-organized, the practice of leasing out the villages to middlemen has been discontinued, and the whole estate is now held under direct management, in which a considerable share is taken by the Maharajah himself, who will attain his majority in September 1879.

Most of the other Behar estates, especially those in the Sarun district, are remarkable for their heavy liabilities. An exception is the estate of Avadh Behari Sarun Misr, which has Rs. 1,10,500 invested in Government securities. The estates under the Court of Wards in the Bhagulpore and Patna Divisions. are also mostly in debt. The difficulty of restoring solvency to a small estate, in which the expenses of management necessarily bear a high proportion to the income of the estate and the material resources are few, is of course greater than it is in the case of large estates, where the proportion of expenditure is small and the opportunities for increase of revenue numerous.

In Orissa the only large wards' estate is that of the Rajah of Kunnika. This had been in the hands of the Orissa Division. Court since 1864, and was still much involved. The financial position was, however, improving, and debts to the amount of nearly one lakh of rupees were paid during the year.

Much progress was also made in the large Chota Nagpore estate in paying off debts, which were reduced during the year from 2½ lakhs to Rs. 1,68,505. The Chota Nagpore Division. Dalbhoom estate, in Singbhoom, and the Deoghur estate, in Lohardugga, were solvent, and had considerable sums invested in securities. Both these estates had been long under the management of the Court of Wards, and their satisfactory condition was due to the care bestowed on their management by the revenue authorities.

The following statement shows the financial condition of the principal wards' estates in Bengal during 1875-76.

1	2	3	4	5	6	7	8	9	10
NAME OF ESTATE.	Current demand of Government revenue, and of rent due to superior landlords from the estates.	Arrear demand of rent due to the estate.	Current demand of rent due to the estates. Profits are paid over to the
Cooch Behar estate.

The results of the administration of the large estates of Chuck-dighee, Paikpara, Nuddea, Nuldangah, Chanchal, and Chota Nagpore during the year were satisfactory. A new manager was appointed to Satkhira, and it was hoped that the high expectations that have been formed of his efficiency would be realized. The manager of the Nushipore estate was removed from his appointment. The arrears of the Chucklajat estate were considerable: there was frequent change of managers, and arrears were allowed to accumulate for two or three years before the institution of a suit to enforce the minor's claims. In the Durbhunga estate remissions of rent were unavoidable; but the expenditure in the estate was larger than seems to have been warranted, especially upon public works, and the expenses of management bore a very high proportion to the amount of the current demand of rent due to the estate. Upon the whole, although considerable zeal and trouble were devoted by the revenue authorities to improving the estates and benefiting the condition of the tenantry, the facts disclosed in the Board's report evinced the necessity of a much more careful control over expenditure, and in some cases of greater vigilance in the realization of old arrears of rent.

General summary.

III.—PROTECTION.

Course of Legislation.

THE following Bills of the Council of the Lieutenant-Governor of Bengal for making Laws and Regulations, whose scope and purpose were explained in the Administration Report of last year, have since received the assent of the Governor-General and become law :—

Bengal Municipalities' Act.

The Bill to consolidate the law relating to municipal matters in towns in Bengal became Act V on the 10th June 1876.

Agrarian Disputes' Act.

The Bill to provide for inquiry into disputes regarding rent, and to prevent agrarian disturbances, became Act VI on the 10th July 1876.

Land Registration Act.

The Bill to provide for the registration of revenue-paying and revenue-free lands, and of the proprietors and managers thereof, became Act VII on the 9th August 1876.

Estates' Partition Act.

The Bill to make better provision for the partition of estates, after being passed by the Council, as mentioned in last year's report, was vetoed by the Governor-General, on the ground that section 11 provided that no partition should be allowed if the separate estate of the applicant would be liable after partition for an annual amount of land revenue less than Rs. 20 ; and if the assets of the estate would be less than Rs. 200, until the proprietor of such estate agreed to redeem the amount of revenue for which his estate would be liable. The Governor-General pointed out that the principle embodied in this section was opposed to the course which had been prescribed by the Secretary of State for dealing with the redemption of the land revenue, and the new Bill accordingly allowed partition to be carried down to the limit of one rupee, with power to the landholder to redeem in case the land revenue after partition should be less than one rupee. The Bill was passed by the Council on the 19th August, and, having received the assent of the Governor-General on the 18th September, is now Act VIII of 1876.

On the 4th November 1876 the President made a statement regarding the course of legislation for the ensuing session, and alluded at some length to the most important item of all—the Bill for the amendment of the substantive law regarding the determination of

rent in the provinces of Bengal and Behar. The reasons for the introduction of this Bill, and the principles on which it is based, will be found in the chapter on Changes of Administration in the last Administration report. On the 4th November leave was obtained to introduce the Bill, but the measure has not been further proceeded with, it being, it is believed, the intention of the Government of India to deal with the subject. A Bill, however, to provide a more summary procedure to recover uncontested arrears of rent is in contemplation. The following is a short statement of measures that have been introduced into the Council during the session of 1876-77, and of their result:—

On the 4th November 1876 a Bill was introduced to consolidate the law relating to the abkaree or (as it is now called) excise revenue in Bengal. This was a mere consolidation measure, and made no alterations in the existing law. It was passed by the Council on the 31st March 1877, but was vetoed by the Governor-General on the ground that one of its sections, by prohibiting the recovery by action of petty debts for liquors and drugs, affected the jurisdiction of the High Court, and was consequently *ultra vires*.

A Bill to enact rules for the appointment of ghatwals in the district of Bankoora, and also more clearly to determine the duties and liabilities of such ghatwals, which was read in Council on the 4th November 1876 and passed on the 14th April 1877, was also vetoed by the Governor-General, on the ground that it barred the jurisdiction of the High Court as regards suits for the recovery of ghatwali tenures.

A similar fate befel the Court of Wards' Bill. This, which had for its object the removal of some defects in the previous Act on the subject, IV (B.C.) of 1870, was passed by the Council on the 7th April 1877. The Governor-General, however, refused his assent to the measure, alleging that as one of its sections exempted the property of a ward from being taken in execution of a decree, it contravened a provision of the new Code of Civil Procedure which makes the judgment-debtor's property liable to attachment in execution of a decree.

On the 16th December a Bill to amend the Jute Warehouse and Fire Brigade Act 1872, and Act II (B.C.) of 1875, was passed by the Council. The object of this measure was merely to transfer to the present Municipal Commissioners for the town of Calcutta the duties which under the Jute Warehouse Acts of 1872 and 1875 had been performed by the Justices of the Peace, who have now ceased to exist as a corporate body. The Bill was assented to by the Governor-General on the 17th January, and is Act I of 1877.

The only remaining Act to be mentioned is the Provincial Public Works Cess Act. This was passed by the Council on the 5th May, and, having received the assent of the Governor-General on the 28th May, became Act II of 1877. This is a measure to provide for the levy of a cess for the construction, charges, and maintenance of provincial public works, and is little more than an application of the existing

method of assessment and valuation under the Road Cess Act to the new cess. The Government of India having determined to develop still further the system of provincial finance established in 1871, and to make over to the management of the local Governments several departments of revenue which have hitherto been under the control of the Government of India, it has been resolved to render the local Governments responsible for the cost and management of extraordinary public works—that is to say, such public works as railways and works of irrigation—which have been constructed with borrowed money and have not been paid for out of the revenue of the year. The Act makes the road cess valuations the basis of a new additional assessment, the proceeds of which will be devoted to the construction and maintenance of provincial public works. The rate of the cess will be fixed by the local Government from time to time for each district, but is not to exceed the rate of half an anna in the rupee: and half of it is to be paid, as the road cess is at present, by the ryot, and the other half by the zemindar. The time and manner of making payments are the same as under the Road Cess Act. The proceeds will be paid into the public Treasury.

Several other Bills were introduced into the Council during the past session, the titles and purposes of which may be shortly enumerated as follows:—A Bill to amend the law relating to public ferries, the object of which is simply to enable the Government to transfer to the district road cess committees the ferries which are situated on roads maintained out of local funds. The measure, however, is not at present to be proceeded with. On the 9th December 1876 a Bill to declare illegal the collection of dues, tolls, and taxes in certain gunges and markets, and from boats in navigable rivers, and to provide for the maintenance of police in, and the conservancy of, public fairs, was introduced into Council, but has since been withdrawn from the list of business. A Bill to amend the rent law in Chota Nagpore was introduced on the 4th November 1876, and has since been read in Council. The existing rent law of that province is contained in Act X of 1859, and the present Bill is a modification of that Act. The grounds of enhancement specified in section 17 of Act X are omitted as inapplicable to the districts of Lohardugga, Hazareebagh, and Singhbhum. The provisions of Act X relating to distraint are also omitted as unsuitable to the circumstances of the province. It being advisable to continue the restriction on the sale of landed property observed in the province, it is further declared that no sale shall take place under sections 105, 108, and 109 of Act X without the consent of the Commissioner of the province. A Bill to provide for the levy of a rate upon irrigated lands in the Lower Provinces of Bengal was brought into Council on the 14th April 1877 and referred to a select committee. This Bill imposed compulsory rates upon all lands irrigated and protected by Government works, but it is not the intention of the Government to proceed with it for the present. A short Bill for extending the provisions of the Labour Districts Emigration Act of 1873 (B.C.) to the district of Chittagong and the Chittagong Hill Tracts is also before the Council. Bills for the amendment of the Road Cess Act, alluded to in the President's speech of the 10th November 1876, and for regulating

the rural police in certain districts of Chota Nagpore, are in preparation ; also a Bill for defining and limiting the powers of settlement officers with regard to enhancement of rent. It is intended by this last measure to enact that settlement officers must invariably proceed upon the principles prescribed by the rent law for the enhancement of rent, and that enhancements made by them and duly confirmed by the revenue authorities shall be deemed *prima facie* correct. Suits to contest these must be brought by the ryots within three months of receiving the notice of enhancement.

Police.

THE total sanctioned strength of the force of the Lower Provinces for the year 1876 was 89 officers (including eleven employed in Assam) and 18,835 men. The strength of the Chittagong Hill Tracts frontier force, including the establishment for miscellaneous civil duty, was 653. Of the total number, 15,797 men were employed on general police duties, 1,661 in guarding jails, 974 in guarding treasuries, 261 as salt preventive police, 168 as opium guard, and 627 as frontier guards. The total cost of the Police Department for the financial year 1876-77 was Rs. 38,74,363, against a gross budget grant of Rs. 39,56,625. The saving thus effected was Rs. 82,262. During the current year permanent reductions have been effected which will further diminish the cost of the police without injuring its efficiency. The cost of the purely civil police was Rs. 25,27,809, or 8 pies per head of population. The rate, however, varied in different parts of the Lower Provinces, from 6·1 pies per head in Behar to 11·7 pies in Orissa and one anna in Chota Nagpore. The proportions borne by the civil police to area and population also exhibit considerable divergences. In Bengal the former is one to every 8 square miles, in Behar it is one to every 10·7, in Orissa one to every 7·2, and in Chota Nagpore one to every 21·1. The latter is one to every 3,701 persons in Bengal, to every 4,959 in Behar, to every 2,365 in Orissa, and to every 2,505 in Chota Nagpore. The civil police thus bears a much higher numerical proportion to the population in Orissa and Chota Nagpore than in Bengal or Behar. This is explained, as regards Chota Nagpore, by the very low proportion to area, the police force being distributed over a vast extent of country. But in Orissa the proportion both to area and to population is higher than in any of the other three provinces. The people of Orissa are probably the most law-abiding in these provinces, and organized crime is practically unknown among them. In the Resolution on the annual Police Report the Lieutenant-Governor expressed an opinion that a much smaller force might suffice for the preservation of order and detection of offences in this Division, and requested the Inspector-General to consider whether it is not possible to make considerable reductions in the strength now allotted to it.

The strength of the municipal police was reduced during the year by two sub-inspectors, three head constables, and sixteen constables. The number of casualties in the municipal police, arising chiefly from resignations, desertions, and dismissals, was high, particularly in the municipalities of the Howrah,

24-Pergunnahs, and Dacca districts. The casualties in Howrah were 75 per cent. of the gross strength, in 24-Pergunnahs 46 per cent., and in Dacca 45 per cent.

Act VI of 1870, for the regulation of village chowkidars, has now been introduced into most districts in the province

Village police.

with the exception of the Chota Nagpore and Orissa Divisions. In some districts, it is said, the chowkidars do not receive their pay with regularity. As the Act, however, provides a specific procedure for the enforcement of this payment, it would seem that there must be some want of vigour or regularity in the administration of the law. The attention of the police and the district authorities generally was drawn to this subject. As a rule the chowkidars generally presented themselves for periodical report at the police-stations to which they belong with more regularity than heretofore. Only 182 village policemen were rewarded during the year, while the number punished was very much greater. In the Burdwan district alone as many as 950 were punished for various derelictions of duty. On the whole, the Lieutenant-Governor gathered from the officers whom he spoke to on the subject when on tour that there is every prospect that the Act will work well when it is judiciously enforced.

The railway, cantonment, and salt preventive police, call for no special notice. Road patrols have been maintained in a condition of efficiency, and the high-

Miscellaneous.

ways have generally been free from robbery. The boat establishment in the eastern districts is not on as satisfactory a footing as might be wished; but such as it is, it was fairly utilized. Much more extensive use was made of the provisions of the law relating to the quartering of punitive police on disturbed villages than during the previous year. Of the 12 parties of police entertained for the purpose of suppressing local crime, three were located on certain villages in the Shahabad district in consequence of the frequency of robberies which had been traced to the villagers and the landowners.

Almost all the inspectors and sub-inspectors, and most of the head constables, are able to read and write, and the

Education.

number of constables in the metropolitan districts who can speak English is increasing. The health of the police, as shown in the hospital returns, which necessarily excluded all cases of temporary or trifling illness at outlying stations, was bad in many districts. The admissions to hospital were 100 per cent. or more in the Chittagong Hill Tracts, Julpigoree, and amongst the railway police. The death-rate was 5·7 per cent. in Backergunge, and exceeded 4 per cent. in Maldah, Dinagepore, and Noakholly. It was singularly low in Mozufferpore and Shahabad. Resignations were most numerous in the railway police, and in the districts of Howrah, Chittagong, and 24-Pergunnahs, owing doubtless to superior attractions in the local labour market.

The conduct of the police during the year showed no improvement on the previous year. The railway, Gurjhat,

Punishment and rewards.

and Noakholly police, again headed the list in respect of bad conduct. In Howrah, also, dismissals were very numerous. Altogether 631 policemen were convicted judicially, against

600 in the previous year, and 3,832 were punished departmentally, against 4,189. Of officers 1·5 per cent., and of men 1·7 per cent., were punished for offences under the Penal Code. Convictions under the Police Act were 1 and 1·5 per cent., and departmental punishments were 32·1 and 16·2 per cent. respectively. The Lieutenant-Governor considered these figures, especially those relating to officers, to be unsatisfactory. One sub-inspector, one head constable, and four constables, were punished after judicial inquiry for torture or maltreatment of prisoners, and one head constable and eleven constables were convicted of extortion. In addition to these one inspector, two sub-inspectors, four head constables, and four constables, were put on trial for torture or extortion, but were acquitted. The inspector was honourably acquitted. The number of policemen holding good conduct rings was increased by 421 during the year. The list of policemen specially rewarded for distinguished ability, courage, or address includes 10 inspectors, 28 sub-inspectors, 58 head constables, and 175 constables.

The aggregate number of cognizable cases reported during the year outside Calcutta and the Suburbs was 117,559, against 120,838 in 1875, 126,122 in 1874, 110,627 in 1873, and 104,121 in 1872. There were exceptional circumstances in 1874 which tended to increase the amount of crime; but though the figures for the past year show an improvement on 1875 as well as on 1874, they are still largely in excess of those reported for 1872 and 1873. If false cases are deducted, the total numbers are 85,205 for 1872, 90,882 for 1873, 99,121 for 1874, 94,783 for 1875, and 95,747 for 1876. The actual amount of crime committed during the past year thus shows a small increase on 1875 and a very considerable increase on 1872 and 1873. The proportion of crime to area was 1 to 1·6 square mile, and to population 1 to 629 souls. There was a satisfactory decrease in the number of false cases instituted. The number of such cases instituted was 21,812, against 26,055 in 1875. The number of false cases reported for each district does not correspond with what is known of the general litigiousness of the people of different parts of the province. Thus while Chittagong showed only 9·2 per cent. of false cases last year the adjoining district of Noakholly had 18·8; whereas in 1873 the proportion was reversed, Chittagong having 53 per cent. and Noakholly 39. Eastern and Central Bengal have always been noted for the tendency of the people to fight out their battles in the civil or criminal courts, and it might be presumed that a larger proportion of the cases reported would prove to be false in these tracts than elsewhere. Yet while Tipperah and Mymensing only showed 16 per cent. each, Chittagong only 9, and Pubna only 13, Beerbhoom had 30, Bhagulpore 37, and Cuttack, Balasore, and Pooree 36, 34, and 31 per cent. respectively. With the conspicuous exception of Dinagapore, false cases were nowhere markedly on the increase, but there were still many districts in which an unduly high percentage was maintained. The Lieutenant-Governor pointed out how necessary it is that on the one hand such charges should not be brought with impunity, and on the other the police should not be allowed to shirk their work on such pretence, and reminded the Inspector-General that every Magistrate, by personally

investigating a fair number of cases taken at random, has it in his power to establish an effectual check.

The number of cases in which no inquiry was made was 10,864, or no less than 9·2 per cent. of the total reported. The Lieutenant-Governor was surprised to learn that in some districts an arbitrary money standard of investigation is fixed, the police availing themselves of the discretion allowed them in all cases in which the value of the property stolen is less than Rs. 5, and pointed out that such a practice is most irregular. The returns for the year furnished an illustration of the evil effects of such a system on the energy and general efficiency of the police. The Gya police refrained from inquiry in 32 per cent., and the Sarun police in 38 per cent., of the cases reported, while the police of the neighbouring districts of Patna and Chumparun inquired into nearly every case, the instances in which no inquiry was held being only ·4 per cent. and ·2 per cent. respectively. But the results of the year showed that the Patna police had 64 per cent. of convictions to arrests, and the Chumparun police 65, while Gya had only 59 per cent. and Sarun only 53. The Lieutenant-Governor, while admitting that no hard and fast rule could be laid down in such cases, said that he would prefer an inquiry in every case, however hopeless or petty, to the manifest abuse which had been allowed in Bankoor, Rajshahye, Bogra, Gya, Sarun, Monghyr, Bhagulpore, and Manbhoom.

The net total of cases under inquiry during the year, inclusive of cases pending from the previous year, and exclusive of false cases, was 87,015. In 34,092, or 39·2 per cent., of these convictions were obtained, against 38·9 per cent. in 1875 and 39·8 per cent. in 1874. The total number of persons in custody was 95,770, and of these 57,092, or 59 per cent., were convicted. The percentage of persons convicted on the number put on trial was 62, against 61·3 in 1875 and 61·7 in 1874. The results were most unsatisfactory in Backergunge, Jessore, and Cuttack, where less than half the number of persons arrested were convicted. In Howrah the results, judged by this standard, were especially satisfactory. Of 91,253 persons actually placed on trial during the year 30,146 were acquitted either by the Magistrates or by the Sessions Courts. In the Resolution on the Police Report for 1875 Sir Richard Temple drew attention to the apparently inferior results obtained in Bengal compared with those of other provinces. It has since been shown that this was owing to a difference of system in the interpretation of some of the terms used in the returns; and Mr. Mouro has found that, calculated on the system pursued in some of the sister administrations, the results for the past year in regard to acquittals are 2 per cent. in favour of Bengal. Sir Richard Temple at the same time adverted very strongly on the large number of persons whom the results of trials showed to have been wrongly arrested. There was a slight improvement in this respect during the past year, still the unfavourable proportion was so large as to require very careful consideration. Mr. Eden asked that, as far as may be possible, ignorant head constables, to whom a vast number of the less important cases are entrusted for inquiry, and who even in the more serious cases are generally first on the spot and have opportunities for mischievous

meddling, may be weeded out, and illiterate men of this class may on no account be placed in charge of outposts. With reference to the remarks made by the Inspector-General pointing out how entirely the existing system under which prosecutions are conducted fails to counteract the shortcomings of witnesses, the attention of all Magistrates was drawn to the orders issued on the subject in 1871, in which it was pointed out to all officers that it was by no means the law, or the spirit of the law, that functions really judicial should be exercised by the police, and that trials before Magistrates should be of the nature of small sessions trials. District Magistrates were told that very serious cases should, whenever possible, be investigated by Joint and Deputy Magistrates on the spot, and these officers should moreover be made to understand that it is an essential portion of their duty to take up every serious case at the earliest convenient stage, to sift the evidence brought before them to the bottom, and not merely to sit as judicial officers deciding cases on the evidence sent in by the investigating officers. The necessity of placing picked men on the court inspectors' staff, and of making proper arrangements day by day for the prosecution of such police cases as come up for trial, was pointed out, and District Magistrates were told that they should endeavour to establish more cordial relations between the higher officers of police and the native Magistrates.

The results of sessions trials were again unfavourable. The percentage of acquittals was specially high in Patna (63), Burdwan (52), and Moorshedabad (51), jury districts, and in Maldah (60), Bhagulpore (58), Tipperah (52), and Durbhunga (51), all non-jury districts. Recent reports, however, show that the results of session trials in Patna have been more satisfactory. Looking to the results exhibited in this report, the Lieutenant-Governor was not prepared to admit that the whole fault lay with the juries. The proportion of acquittals in Maldah and Bhagulpore was higher than in any non-jury district; and this could not have been owing to any prejudices against the police on the part of either of the Judges, as the same Judges, sitting in Dinagapore and the Sonthal Pergunnahs, convicted, the former in a considerable, and the latter in a very large, number of cases.

The proportion of stolen property recovered was generally fair, but in a few districts, markedly in Bankoora, the percentage recovered was and has for some years been very low.

The following table shows the number of true cases reported under each class during the past five years:—

		1872.	1873.	1874.	1875.	1876.
Class I ...	Offences against the State and public tranquillity ...	3,120	2,920	2,606	2,755	2,700
" II ...	Serious offences against the person ...	4,018	4,392	3,905	4,184	4,108
" III ...	Serious offences against person and property, or against property only ...	20,210	24,531	28,615	23,957	22,280
" IV ...	Minor offences against the person ...	3,994	4,126	6,495	9,862	9,073
" V ...	Minor offences against property ...	38,767	40,267	43,343	38,093	38,832
" VI ...	Other offences not specified above ...	14,497	13,765	13,272	15,206	18,257
	Other special laws ...	599	872	951	726	495
	Total ...	85,205	90,882	99,187	94,783	95,745

The number of cases of false coining and cognate offences increased from 135 in 1875 to 160 in 1876. Convictions were obtained in 83 cases. No instance of extensive organization was brought to light. Under "rioting and unlawful assembly" there was a satisfactory decrease from 2,044 to 1,933 cases. Indeed, with the exception of 1874, the past year showed a smaller number of cases than any of its five immediate predecessors, and the gradual decrease from 2,502 cases in 1873 was fairly sustained. In the Dacca and Patna Divisions alone did the statistics of this class of crime call for any further special remarks. The former Division contributed no less than 736 to the total of 1,933 cases reported in the province, and a steady increase was shown from 589 cases in 1873. Furreedpore and Backergunge gave 188 and 210 cases respectively. No less than 19 cases in these two districts were attended with loss of life; and in Furreedpore one resulted in a cowardly and brutal murder of a zemindar by his tenants. The Lieutenant-Governor considered that such a state of things as this was most discreditable to the local authorities, and that this class of crime could not have increased so seriously in Furreedpore and Backergunge had there not been great laxity on the part of the police and an absence of vigour and judicious action on the part of the Magistrates. In the Patna Division 272 cases occurred, or 13 less than during the previous year. Out of 153 of these, which were decided judicially during the year, convictions were obtained in 137. The riot in Durbhunga was followed by vigorous and judicious action on the part of the Magistrate, Mr. MacDonnell; but the antecedents of the case afforded a striking example of the ease with which occurrences of this kind might often be prevented, and the Lieutenant-Governor pointed out at the time that the police had been culpably negligent and the sub-district officer less energetic than might have been desired.

The gross number of serious offences against the person was 4,108, against 4,184 in 1875 and 3,905 in 1874. Convictions were obtained in 39.6 per cent. of the cases only, against 41 and 42 respectively in the two previous years. The percentage of convictions to arrests was only 44. These unsatisfactory results were in great measure attributable to the failure of the police in murder cases. The total number of murders was 342, against 302. The number of cases of murder by dacoits was very small, but in murder by poison and in "other murders" a considerable increase was reported. It is impossible to account satisfactorily for fluctuation in this crime. All that the police can do is to have as many offenders as possible punished. Little success, however, attended the police action in this class of offence. Only 36.3 per cent. of the cases were detected, and only 273 persons out of 994 arrested, or 27.4 per cent., were convicted. This was believed to be attributable partly to the known disinclination of juries to convict on a capital charge, and partly to the tendency of police-officers to remain content with the confession of a prisoner, without procuring corroborative proof on the various points connected with it. The great importance of giving instructions and directions on the latter point to the subordinate police when conducting difficult investigations was impressed on both Magistrates and Superintendents. Only two of the three cases of murder by dacoits were brought to

trial during the year, and in both of these convictions were obtained. Eleven out of sixteen cases of murder by robbers were successfully prosecuted. Of 23 cases of murder by poison, only seven resulted in the conviction of the guilty persons. "Other murders" showed a considerable increase, while culpable homicide and the cognate offences of grievous hurt and hurt by dangerous weapons all showed a decrease. In all these cases the Dacca Division headed the list. Out of 42 cases of ordinary murder which occurred in the two districts of Backergunge and Furreedpore 20 resulted in convictions. The results of the police inquiries were very unfavourable to the force in Nuddea, Chittagong, Rungpore, and Mymensing. In Patna only two out of 21 persons committed to the sessions, in Moorsshedabad only three out of 26, and in Dacca only three out of 31, were convicted. These are all jury districts. Under culpable homicide only 79 convictions were obtained in 203 cases. The results were specially bad in Bhagulpore, where 11 cases occurred without one being detected. The most striking feature in the returns of grievous hurt was the extraordinary variation in the number of cases accepted as false in the different Divisions. Burdwan, Rajshahye, and Chittagong, showed 67, 68, and 86 per cent. respectively, while Bhagulpore had only 9; and Patna and Dacca, where nearly half of the total number of charges were laid, had only 12 and 15 respectively. The Lieutenant-Governor thought it possible that in the first three Divisions charges of grievous hurt, which on inquiry turned out to be cases of simple hurt only, were erroneously entered as false instead of being transferred to the appropriate subhead of the statement. There was a considerable decrease in cases of administering stupefying drugs; and it was specially satisfactory that the Patna Division, which had hitherto been generally conspicuous for this class of crime, showed only one case. Cases of kidnapping fell from 216 to 178, and there was a remarkable decrease in the Dacca Division, which formerly headed the list. The more grievous forms of wrongful confinement and restraint, of which 170 cases occurred, are only of frequent occurrence in the Dacca Division. This Division contributed 106 cases, of which only six were successfully prosecuted.

There was not much fluctuation in minor offences against the person, 9,073 cases having occurred against 9,862 in the previous year. The result of prosecutions in cases of wrongful restraint was very unsatisfactory, 1,821 persons being acquitted against 1,484 convicted. The Dacca Division took the lead in these as in most other offences of this nature. The Dinagepore district showed 265 cases false out of 335 reported. The Lieutenant-Governor declined to believe that these figures represented actual facts.

The actual number of dacoities which happened in each of the past four years was—

1873	325
1874	421
1875	236
1876	137

The decrease was general, but it was most marked in the Rajshahye and Chota Nagpore Divisions. Nine districts are said to have been entirely free from this crime during the year. The districts in which the

reported decrease was most conspicuous were Beerbhoom, Moorshedabad, Mymensing, Dinagepore, and Rungpore. The number of cases under trial during the year was 154, against 254 in 1875, and 397 persons were convicted, against 347. The results of trials were satisfactory in Midnapore, Hooghly, Nuddea, Balasore, and Lohardugga, and most unsatisfactory in Mymensing, Patna, and Manbhoom, where every prisoner was acquitted. The Midnapore police, under inspector Haraprasad Das, specially distinguished themselves in dealing with this crime. Convictions were obtained by them in 19 out of 24 cases, and 73 per cent. of the persons sent up were committed to the sessions. They also operated successfully against the offenders in a case which occurred in the 24-Pergunnahs. In the Dacca Division the detective action was feeble, and convictions were only obtained in two out of 16 cases. The police were generally baffled in river dacoities. In the Patna Division only five cases out of 18 were successfully investigated. Similarly unsatisfactory results were reported in 1875. The great decrease in dacoity throughout the province was probably to some extent the direct outcome of the orders of 30th November 1875, in which Sir Richard Temple expressed his intention of no longer tolerating the prevalence of this crime in Bengal; but a decrease in this crime is also to be expected during seasons of prosperity and commercial and agricultural activity. In the orders alluded to attention was directed to the various means at the disposal of the police by which it might be made impossible for dacoits to pursue their profession with impunity, and crime might thus be checked by the probability of subsequent detection. The police, however, did not confine themselves to supervision of bad characters, but caused large numbers of persons to be confined on suspicion of bad livelihood. A large reduction in the number of dacoities was under the circumstances naturally to be expected. Except in Midnapore, Hooghly, and Moorshedabad, no special measures of prevention, beyond an indiscriminate crusade against persons said by the police to be bad characters, were taken.

In robberies there was a decrease from 171 to 141, but only 37 per cent. resulted in convictions. None of the cases were specially noticed by the Inspector-General.

The gross number of cases of lurking house-trespass or burglary, theft, theft of cattle, and receiving stolen property during each of the past two years, was—

				1876—CONVICTIONS.			
				1875.	1876.	Cases.	Persons.
Lurking house-trespass	22,185	20,619	1,564	2,435
Theft	24,450	24,589	7,281	11,326
Cattle theft	1,999	1,823	867	1,342
Stolen property	2,277	2,087	1,526	2,623

The results of inquiries were very unsatisfactory in burglaries, and not creditable in thefts. In cases of stolen property the outturn of prosecutions was good; but charges under this head are rarely made except by the police, and then only in cases where property has actually

been discovered in the course of other inquiries and success is generally assured. The failure of the police in burglary cases was most lamentable.

The number of cases instituted during the past year for bad livelihood was 4,957, against 3,387 in 1875, showing an increase of 1,570. Out of the total number of 5,154 persons who were sent up for trial, 3,618 were convicted and 1,243 acquitted. The Lieutenant-Governor, in reviewing the annual report, was compelled to animadvert strongly on the manner in which the vagrancy sections of the law had been worked. It appeared evident that much injustice and oppression had been occasioned by prosecutions for bad livelihood, resulting in the acquittal of no less than 1,243 persons. The Lieutenant-Governor was not at all satisfied with the manner in which investigations into these cases were conducted, and he directed that judicial officers should satisfy themselves most fully on the spot, not that the accused is a person who may possibly, if left at large, commit some offence, or that he is a person who has some time of his life been in jail on some charge or other, but that he is really a criminal who supports himself by preying upon society.

The neglect of the police in some districts to take cognizance of breaches of the excise laws was very marked. Only 39 offences of this class were taken up in Burdwan, 34 in Howrah, 9 in Nuddea, 8 in Jessore, 3 in Dinapore, 2 in Pubna, 4 in Furreedpore, 4 in Backergunge, 5 in Mymensing, 6 in Noakholly, and 9 in Sarun. In salt cases also there appeared to be some fitfulness in the efforts of the police, especially in Midnapore and Cuttack.

The number of non-cognizable cases instituted on complaint and taken up by the Magistrate was 98,287, against 95,766 in the previous year. The police were employed to make inquiry in 4,964 cases, against 5,569 in 1875. In some divisions and districts the time of the police was thus apparently unnecessarily taken up, notably in Bongong, in Nuddea, and in Furreedpore. Non-cognizable crime fluctuated considerably in some districts. In Howrah cases of this class fell from 6,287 in 1875 to 2,518 in 1876. In Dinapore there was an increase from 1,084 to 2,263. This was apparently due to capricious and indiscreet action on the part of the Magistrate. The bulk of the increase came under the head of offences against public justice—a class of offence of which not one was taken up by the Magistrate of his own motion in 1874 and 1875. The prosecutions for giving false evidence resulted in 22 convictions only, with 51 acquittals. The proportion of persons convicted of non-cognizable crime to population ranged from one in 5,898 in Mozufferpore to one in 663 in the Sonthal Pergunnahs, one in 623 in Noakholly, and one in 531 in Howrah. The Lieutenant-Governor specially regretted to observe the very large number of cases instituted and of persons convicted in the Sonthal Pergunnahs. A much greater number of persons were convicted of giving false evidence or making false complaints in this than in any other district of the Bhagulpore Division.

Except from the Chittagong Division, the reports on the general character and conduct of the police were favourable. The misconduct

of the Chittagong police was chiefly exhibited at the time of the cyclone. Inspection duties were inefficiently performed in Chittagong, Burdwan, Midnapore, Jessore, Moorshedabad, and Lohardugga.

No change was made in the strength or cost of the police either in the town of Calcutta or the suburbs during the year. The number of men dismissed from the police (1,481, or 4·8 per cent.,) was large. In the suburbs the number of dismissals increased from 6 to 44. No European constables were dismissed, and only one officer of the higher grades was removed. The gross number of fines inflicted showed a substantial decrease on the previous year. The proportion of Bengalees to up-countrymen in the force was 311 to 1,867. It is undoubted that Bengalees are not generally well suited for duties of watch and ward, and particularly for night patrol. But it was pointed out to the Commissioner that watch and ward is not all that police-officers have to look to, and that no civil police can be efficient if most of the men are only fit for duty as sentries. He was at the same time asked to endeavour to induce Bengalees, who are essential for detective purposes, to join the force.

The total number of cases reported in the town and suburbs of Calcutta during the past year was 35,733. In 1875, 37,763 cases were instituted. The decrease was in great measure owing to a falling off in the number of conservancy prosecutions in the suburbs; but it was to some extent observable under most heads, cognizable and non-cognizable, and in offences under the Penal Code as well as in miscellaneous cases. The number of persons arrested showed a corresponding falling off, and the increase which nevertheless took place in convictions was ascribed to the withdrawal of magisterial powers under Act IV of 1866 from the Deputy Commissioner. This rendered it necessary for the police to place all persons arrested before either the Commissioner or the Magistrate, and persons discharged with a warning by the Magistrate were shown as convicted, whereas previously persons similarly released by the Deputy Commissioner could not be so shown. Altogether 25,861 persons out of 35,368 arrested were convicted in 1876, against 22,792 out of 36,930 in 1875. The convictions for offences under the Penal Code showed that in the town there is one criminal in every 126 persons, and in the suburbs 1 in 170. The proportion of criminals to population was about the same for Hindoos and Mussulmans in the suburbs. In the town, however, the proportion borne by Mussulman criminals to population was more than double that of the Hindoos.

The total number of true cases of offences against property fell from 2,808 in 1875 to 2,565 in 1876, and the value of the property stolen from Rs. 1,64,646 to Rs. 1,05,667.

Town.—Serious offences against person and property both showed an increase, and minor offences a decrease; but the difference was so small that no explanation was possible. Four murders were committed during the year—two by drunken sailors and two by natives, and five attempts at murder were made, in four of which natives were the culprits, while in the fifth the offender was a European soldier. In 1875 there were only three murders and two attempts. In 1876, unlike 1875, there were none of those atrocious cases, once so common in Calcutta, in which prostitutes

are murdered for the sake of their ornaments. The two native murderers were convicted. The sailors were acquitted under circumstances which reflected no discredit on the police. In four out of the five cases of attempt at murder the offenders were convicted; in the fifth the accused was pronounced insane and was removed to a lunatic asylum. Three cases of culpable homicide occurred. In one case death resulted from rupture of the spleen, and the accused was discharged; in one the accused was convicted; and in the third case there was an apparent failure of justice. There were 13 cases of grievous hurt, of which five were withdrawn by the complainants. In one the accused absconded, and in four convictions were obtained. The other three were cases of stabbing, and in none of them was the offender brought to justice. Only 102 cases of burglary occurred in Calcutta during the past year, and of these 25 were detected. Only 73 out of the 102 were successful burglaries, and of these only 60 occurred at night. Out of 1,961 true cases of theft 821 were successfully inquired into. Under the heads of "lurking" and "possessing suspicious property" arrests were not so indiscriminate as in the previous year.

Suburbs.—In the suburbs there was little variation in the amount of cognizable crime. Three murders and one attempt at murder occurred, and all were detected. In two out of the three cases of culpable homicide the accused were convicted. One hundred and twenty-two burglaries occurred, of which 63 were successful and 27 cases were detected. Three hundred and thirty-five cases of theft were detected out of a total of 841. The number of cases was not excessive, nor were the results specially bad. The suburban area is large and the constables' beats are extensive; while the construction of the houses, the irregular formation of the streets and lanes, and the defective lighting, afford facilities for the commission of burglaries. Still, though the results were fair, the suburban police was not so successful as the city force.

There was a slight decrease in the number of suicides, and some increase in the number of accidental deaths. The most noteworthy accident that occurred was the unfortunate explosion of the torpedo boat on the river, in which eleven persons lost their lives.

The imports of all descriptions of fire-arms and of gunpowder during the past year showed a remarkable decrease, and this was especially noticeable in respect of arms intended for the Bengal frontier districts and the Upper Provinces.

Old offenders.

The following table shows the number of old offenders borne upon the registers of the town and suburbs:—

		Number borne on the books on 31st De- cember 1876.	Number re- siding.	Number in jail.	Number disappeared.
Town	...	1,060	681	121	258
Suburbs	...	952	754	61	137

Criminal Justice.

THE result of the sessions trials on the original side of the High Court during 1876 is shown in the margin. Of the 176 persons convicted by the High Court in its ordinary original jurisdiction two were sentenced to death, 20 to transportation, one to penal servitude, 152 to rigorous imprisonment, and one to simple imprisonment.

	High Court.	Ordinary original jurisdiction.	Referred jurisdiction.
Number of persons discharged without trial ...	4	0	
Acquitted on trial ...	33	8	
Convicted ...	176	82	
Remaining at end of the year ...	2		

Altogether 2,524 persons appealed to the High Court or applied for revision under section 296 of the Criminal Procedure Code, with the following result:—sentence confirmed, 1,776; sentence modified, 110; sentence reversed, 408; proceedings quashed, 20.

The total number of persons committed to the Courts of Sessions for trial during the year, including those remaining at the end of 1875, was 3,876. Of these 58 were discharged without trial, 1,354 acquitted, 2,069 convicted, and 369 remained at the close of 1876. Of the 2,069 persons convicted, 77 were sentenced to death, 366 to transportation, one to penal servitude, and the remainder to imprisonment, with or without fine.

The total number of persons who appealed to the Courts of Sessions during the year was 6,592. The appeals of 1,989 of these were rejected, while the sentences of 2,489 were confirmed, of 556 modified, and of 973 reversed. In 10 cases the proceedings were quashed, in 63 further inquiry was ordered, and in 167 reference was made to the High Court for revision of sentence.

The total number of persons under trial during the year under review before the courts of the various Magistrates of Lower Bengal, and the results of those trials, are shown below:—

Number of persons under trial ...	161,619
Ditto ditto discharged without trial ...	21,514
Ditto acquitted ...	35,088
Ditto convicted ...	96,723
Ditto committed ...	3,410
Ditto otherwise disposed of ...	355
Ditto remaining at end of year ...	4,529

Of the 96,723 persons convicted, 5,660 were sentenced to 15 days' imprisonment, 15,439 to six months, 4,725 to two years, 57 to seven years, and the remainder to imprisonment with or without fine.

The total number of witnesses who attended the different courts during the year was 400,760. Of these 385,593 were examined by the different Magistrates, 14,447 by the Sessions Courts, and 720 by the High Court in its ordinary original jurisdiction.

The number of convictions that were followed by imprisonment was larger during the past year than it had been in any year since 1866, with the exception of 1874, which was also a year of scarcity. The increase in the year under report was probably due to the imprisonment of a greater number of bad characters under Chapter XXXVIII of the Criminal Procedure Code. The increase was most marked in the districts of Dinagepore, Bogra, Julpigoree, Mymensing, Gya, Shahabad, and the Sonthal Pergunnahs. On the other hand, the districts of Burdwan, Beerbhoom, Midnapore, 24-Pergunnahs, Mozufferpore, Durbhunga, Sarun, and Manbhoom showed a considerable decrease in the number of imprisonments.

Of the prisoners admitted into jails during the year 471 were under 16 years of age, against 413 in 1875 and 535 in 1874. Some progress has been made towards opening the proposed reformatory school at Alipore. A Board has been appointed, rules have been drawn up and approved, and the building has been made over to the Public Works Department for the necessary alterations.

The total number of convicts received into jail on reconviction was 6,471, or 12·30 per cent. of the whole, against 12·22 in 1875. Of this number 4,295 had been convicted once before, 1,297 twice, and 879 more than twice. Of the total of 471 juvenile prisoners under 16 years of age, 64 had been previously convicted. In 1872 the number of reconvictions was returned as 1,377; in 1873 it was 1,695; in 1874 it was 2,757; in 1875 it was 3,075; and in 1876 it was 3,714. The number of reconvictions among prisoners admitted to jails during the year thus shows a considerable improvement upon the previous year, the proportion being 11·1, against 9·7. This increase would seem to imply that greater attention was paid both by magisterial and jail authorities to the registration of previous convictions.

The total number of persons sentenced to whipping during the year was 3,017, of whom 2,657 were flogged for first offence and 360 for second or subsequent offence. In 66 cases the number of stripes awarded was less than five, in 487 cases the number was under 10, in 821 under 15, in 639 under 20, in 563 under 25, and in 441 under 30. Sentences of whipping were inflicted on 329 persons under 16 years of age, and on 49 persons over 50. In 353 cases the offender was sentenced to imprisonment in addition to flogging. Of the 3,017 persons flogged, only 87 were able to read and write.

Daily average number of prisoners.

The daily average numbers of each class of prisoners in jails and lock-ups respectively are shown below :—

Daily average of prisoners.			1876.	1875.	Increase or decrease.

The decrease in the number of operations under the European Vagrancy Act which had been effected of late years was still sustained. This was attributable to the vigilance exercised over the proceedings of importers of horses from Australia.

When the annual celebration of the Hindoo Ruth festival was about to take place, the proprietor of the Mohesh car, at Serampore, represented that owing to orders issued by the local authorities it was found impracticable to have the car dragged. The Lieutenant-Governor ruled that the interference of the Magistrate should be restricted to the one object of guarding against loss of life, and that he should ascertain the names of the managers of the ceremonies and distinctly inform them, at least six weeks before-hand, of the precautions to be insisted upon in each case.

Under section 301 of the Criminal Procedure Code the Court of Session is empowered, on receipt of the order of the High Court confirming a sentence of death, to issue a warrant to the officer in charge of the jail in which the convicted person is imprisoned to cause the sentence to be carried into execution, but the law does not fix the time which must elapse before effect is given to the sentence. On several occasions the Lieutenant-Governor found it necessary to issue orders directing the postponement of the execution of sentences of death pending the further inquiries ordered. These orders reached the District Magistrates before the sentences had been executed; but it seemed desirable to provide against the contingency of sentences being carried out by District Magistrates before the receipt of the order of postponement, or before a reasonable time had been allowed for the presentation of petitions by the prisoner's friends for pardon or remission of such

Period after which execution of sentences of death should take place.

sentences. Moreover, it seemed proper to avoid as far as possible the necessity of issuing orders for the postponement of sentences pending the consideration of such petitions. Instructions were accordingly issued to all Sessions Judges to the effect that in future, when issuing a warrant for the execution of a sentence of death, they should be careful to fix the date on which the execution is to be carried out at not less than 14 nor more than 21 days from the date of the issue of the warrant.

In the year 1873 Sir George Campbell, with the sanction of the Government of India, promulgated certain rules for the payment of diet-money and of travelling expenses to witnesses and complainants in cases coming before the criminal courts. These rules have been three years in operation, and have been sufficiently tested, with the result that they have been pronounced by district officers and Judges with marked unanimity to have worked successfully, and to have been very useful in obviating cases of hardship in the administration of criminal justice. District officers and Judges were requested to use their discretion in all cases considerately, and strictly with a view to promoting the ends of justice and to mitigating any cases of hardship which might otherwise occur. They were told that the allowances should never be granted in the case of witnesses who are deemed not to have given their evidence fully or fairly, and but seldom in cases which are of no great interest to the public; and that it should be the rule to give them in cases committed to the sessions, and the exception to give them in those Magistrates' cases which are bailable. The practice of excepting defendants' witnesses as such from the benefit of the rules had already been condemned. It was pointed out, however, that no allowances should be granted to them if they are false or unnecessary witnesses, engaged in a conspiracy to defeat justice. The rules were slightly revised in consultation with the Legal Remembrancer, and the revised rules, which include charges for tolls at ferries, were finally sanctioned by the Government of India.

PRISONS.

THE total number of persons in confinement on the 31st December 1876 was 21,264, against 21,265 on the last day of the previous year, and 19,683, the average for the years 1871-74. The number of civil prisoners admitted during the year shows an increase of 200 on 1875. The number in jail on the last day of each year was 155 and 134 respectively. The admissions of under-trial prisoners were 32,799, against 33,186 in 1876 and 33,051 in 1875.

The number of convicts admitted was larger than in any year since 1866, with the exception of 1874, which was also a year of scarcity. The increase corresponds almost exactly with the increase in the number of persons committed to prison in default of security for good conduct. The total number of convicts in confinement on the last day of the year 1876 was 19,850. Of these, however, 3,000 were specially released the next day, so that the current year opened with a smaller number of convicts than any year since 1871.

The average length of time for which under-trial prisoners were detained in jails was 16·17 days, against 15·41 in 1875. In Moorshedabad, Backergunge, and Singbhoom jails the average period exceeded 30 days. Among lock-ups the average was excessive in Jamtara, Contai, and Bhuboah. Altogether 26 under-trial prisoners and 27 convicts escaped and evaded recapture. The number of convicts released on appeal was 1,473, or 3·7 per cent. of the total imprisoned on conviction.

The percentage from Chittagong (12·1) was very high. The number of executions was 58·3, against 66, the average of the past 12 years. Altogether 539 prisoners earned a remission of a part of their sentences under the mark rules by good conduct; six were set at large under special orders of Government; one was discharged on account of old age, and two in consequence of incurable blindness; and 36 short-term prisoners were released under rule 297 of the old Jail Code on account of dangerous illness.

The maintenance of sub-divisional lock-ups costs the Government not less than a lakh of rupees per annum, whilst the cost of each prisoner confined in them is more than double that of a prisoner in a district jail. The Lieutenant-Governor has requested the present Inspector-General, Dr. Lethbridge, to submit a special report on the management of these sub-divisional jails, showing whether their number and their expenditure cannot be reduced.

After allowance is made for hospitals and punishment cells the gross capacity of the jails of Bengal, on the scale of 36 superficial feet and 500 cubic feet per man, may be roughly stated as—

Central jails	9,250
District „	11,600
			Total	...	<u>20,750</u>

The number in each class of jail on 31st December 1876 was 9,812 and 7,292 respectively; but 3,000 were released next day.

The total sum expended in jails and lock-up buildings during the year was Rs. 1,51,792, of which Rs. 44,006 was devoted to repairs and Rs. 1,07,786 to the construction of new works. Some district jails are such only in name. They consist simply of a cluster of badly constructed and insecure huts, where it is most difficult to enforce discipline or to carry out jail regulations. Under the rules which have recently been drawn up for the utilization of convict labour in the construction of jail buildings under the general professional guidance of the Public Works Department it will be possible to erect substantial buildings at a moderate cost, and much of the delay which has hitherto so often occurred in carrying out petty improvements will be obviated.

There were 134 escapes during the year,—76 from jails and 58 from lock-ups. The average of the ten previous years was 157·8. Of the cases which occurred 15 took place, not from jail, but from the custody of the police while on transit. The returns for the past year showed some improvement in this respect, but there was still evidence of gross and inexcusable carelessness in many of the cases. Thus, 29 prisoners found it possible not alone to break out of a masonry ward, but afterwards to scale the wall of the prison. No less than 10 under-trial prisoners succeeded in accomplishing this feat in one night in the Rajshahye jail. On that occasion the escape was not owing to any cunningly devised scheme on the part of the prisoners, but to the remarkable facilities afforded by the neglect on the part of the jail officials of the most ordinary caution. Careless searching had enabled the prisoners to smuggle large nails into the jail; the warders slept while the nails were used in forcing the locks; and the prisoners, walking out of the ward, found a bamboo and a rope, with which they were enabled to scale the wall with ease. In 11 other cases the prisoners simply walked through the open gate of the jail. Altogether 36 cases occurred outside, and 87 from the inside of the jail or lock-up; while in 11 cases the point from which the escape was effected was not discovered. The jail establishment was in fault in 26 cases, and the police in 97, while they were both to blame in 11. There were 10 jails guarded by a warder watch, and 39 guarded by police: from the former there were 11 escapes, and from the latter 59. From 28 lock-ups guarded by warders there were 6 escapes, and from 57 guarded by police there were 43.

Nearly 20 per cent. of the total number of effective convicts were employed as prison officers and servants, and 53 per cent. were employed on manufactures; the remainder were occupied in the jail gardens, in extramural labour, or in building operations. Penal labour was not exacted from the full number of prisoners liable to that form of employment, owing to a deficiency in the appliances in some jails. Orders have been issued to remedy this as soon as possible. The larger jails showed an improvement in respect of manufactures. The principles kept in view were the reduction of the number of petty manufactures and the selection for each large jail of some special industry suited to its particular circumstances and surroundings. The conduct of prisoners generally was fairly satisfactory. The number employed as convict overseers during the year was 1,373, of whom only 133 were punished. Altogether 9,096 prisoners were eligible for marks for good conduct; of these, one-half earned marks at the rate of no less than 40 out of a maximum of 48. The number who were released during the year, having obtained a remission of their sentences under these rules, was 539, against 360 in the previous year. Several instances of imperfect knowledge and of negligence in the administration of these rules came to notice during the year.

The number of punishments inflicted on convicts by the criminal courts was 64, against 42 in the previous year; and 17,654 were punished by jail officers, against 17,870. The percentage in each year of total punishments to the average number of convicts in jail was 89·21 and 91·35 respectively. Paucity of punishments is not necessarily a sign of good discipline. Without punishments it is impossible to expect that those who have defied the law can be reduced to a condition of complete discipline and subordination to control. The best managed jails showed a high average of punishments, while, with rare exceptions, discipline was reported as lax in those where the average is small. The numerical test, however, is not always in itself a safe guide. Thus in Jessore jail, which showed the highest ratio for the year, it was found that the punishments, though so very numerous, were so light as to be practically ineffectual. Corporal punishment was inflicted in 2,370 cases, against 2,973 in 1875 and 4,143 in 1874. The number punished with solitary confinement was 748, against 936 in 1875 and 1,225 in 1874.

Exclusive of manufacturing charges, the expenditure of the Jail Department during the year amounted to Rs. 11,16,740, against Rs. 11,00,667 in 1875. Though there was thus an absolute increase of Rs. 16,073, the number of prisoners in confinement being larger than in the previous year the average cost was only Rs. 51-2-11, against Rs. 51-7-9.

The details of expenditure showed an increase under every head except supervision and clothing. Under the former head the decrease was chiefly due to greater economy in the employment of extra establishment. Under clothing the average cost fell from Rs. 3-7-6 in 1875 to Rs. 2-14-6. The charges were very much above the average in the Pubna, Maldah, and Sarun jails. Under the head of rations the average cost was less, and under hospital charges greater, than in the previous year. With the exception of fish all the principal articles of

diet were cheaper than in 1875. Much was done to reduce the cost of food by the adoption of such measures as the purchase of stocks at harvest time and the preparation of the raw materials by jail labour, but unnecessary variations were observed in the charges at neighbouring jails. The food of each prisoner cost Rs. 24 in Bankoora, while Midnapore fed its prisoners for Rs. 21 each: the charge was only Rs. 21 in Moorshedabad and Rs. 18 in Nya Doomka, and yet Rs. 25 in Beerbhoom; Rs. 26 in the Presidency jail and Rs. 28 a mile off, in the Alipore jail; Rs. 22 in Nuddea and Rs. 31 in Jessore; Rs. 13 in Maldah and Rs. 22 in Rajshahye; Rs. 21 in Bogra, Rs. 25 in Rungpore, and Rs. 40 in Julpiporee; Rs. 22 in Noakholly and Rs. 31 in Chittagong; Rs. 16 in Singbhoom, Rs. 21 in Manbhoom, and Rs. 28 in Lohardugga. Quite as striking divergences were noticed under "hospital charges." In Bankoora the daily average number of sick was 4·89, and the total cost was Rs. 184; while in Beerbhoom the average was 10·55, and the cost was only Rs. 114. In Nuddea it cost only Rs. 124 for 13·15 sick per diem; in Jessore the charges for a daily average of 7·91 amounted to Rs. 275. Hazareebagh treated a daily average of 52·82 for Rs. 750, yet in Rajshahye, with a daily average of 20·71, the gross charge was Rs. 701; and Dinagepore, with 11·56, or little more than one-fifth of the Hazareebagh average, spent Rs. 584. Nya Doomka and Maldah had 1·46 and 1·94 respectively, yet the hospital charges in the former jail were more than seven times those in the latter. Singbhoom treated 8·41 patients a day for Rs. 188, while Lohardugga spent Rs. 179 on 6·16. The Inspector-General was asked to give his careful attention to the whole subject of expenditure under these two heads, and under that of clothing. The charges on account of police guards were excessively high in Beerbhoom, Nuddea, Tipperah, Bogra, Pooree, and Singbhoom. There was a gross increase of Rs. 6,080 under the head of contingencies, and the average cost per prisoner on this account rose from Rs. 2-15-8 to Rs. 3-3-2. This was chiefly due to the large number of prisoners transferred during the year. The importance of carefully checking this, perhaps the most elastic of all charges, has not been lost sight of, and the attention of superintendents has been especially directed to the subject.

The charges for the year on account of manufactures amounted to Rs. 6,20,700, against Rs. 5,52,100, and the profit was Rs. 1,93,900, against Rs. 1,91,600.

Manufacturing charges.

The explanation was that there was a large decrease (Rs. 62,400) in the credits received for manufactured goods supplied to Government. The operations connected with the preparation of food, such as husking grain and the like, were in many jails conducted by means of convict labour during the year. The value of the labour thus expended was not charged on articles consumed in the same jail. The cash receipts for articles sold showed a decrease of Rs. 55,500; but this was accounted for by the large realizations in 1875 on account of articles manufactured in previous years. Insufficient attention was paid to the selection of articles for manufacture for which there is a local demand, such as oil. The jails which had the largest stores of manufactured goods on hand at the close of the year were Hooghly, Presidency, Dinagepore, Rajshahye, Dacca, and Purneah; and every one of these was in the

same predicament on the first day of the year. The excess of outturn over expenditure in the Alipore jail was Rs. 84,700, against Rs. 81,300 in the previous year. The cash profit, including sums realized for goods manufactured in previous years, was only Rs. 1,32,600, against Rs. 1,91,900. The jails in which the highest profit in proportion to the number of effectives was earned were Alipore, Presidency, Russa, and Darjeeling. In Mozufferpore, Durbhunga, Buxar, Hazareebagh, and Chumparun it was slight, and in the three last named inappreciable. As regards Buxar and Hazareebagh this was owing to the employment of the prisoners chiefly on building. There was a loss in Bankoora jail of Rs. 41, in Rungpore of Rs. 541, and in Hooghly of Rs. 4,396. In Hooghly stock which had been overvalued in other years was sold at an apparent loss. The amount of outstanding bills was very high in the Hooghly, Presidency, Alipore, Rajshahye, Rungpore, and Shahabad jails, and the Lieutenant-Governor directed that they should be at once reduced. The aggregate profits from lock-ups was very small. Eleven lock-ups made a loss upon their manufactures. In one of these, Dowlut Khan, the loss was caused by the cyclone.

The tables of comparative sickness and mortality in the Bengal jails and lock-ups show that in respect of general unhealthiness the famine year of 1866 stands first on the list, with 5·45 per cent. of daily average sick, while 1870 stands last with 3·35. The death-rate varied from 10·70 in 1866 to 4·00 in 1871. The average mortality was 5·89 per cent., of which one per cent. was contributed by cholera. The past year was above the average in mortality from cholera and slightly below it in general mortality. The percentages were 1·2 and 5·73 respectively. The death-rate from cholera was considerably higher than in any year since 1866. Sixteen jails (Kussa, Baraset, Rungpore, Bogra, Pooree, Singbhoom, Midnapore, Presidency, Alipore, Nuddea, Maldah, Darjeeling, Tipperah, Monghyr, Purneah, and Doomka) were entirely free from mortality from this cause. Cholera was most fatal in Julpigoree (10·52), Lohardugga (6·52), Sarun (6·21), Pubna (5·89), and Chumparun (4·83). Sarun and Lohardugga are ordinarily fairly healthy jails. If deaths from cholera are excluded, the ten most unhealthy jails stand in the following order:—Rungpore, Julpigoree, Chumparun, Backergunge, Singbhoom, Pubna, Pooree, Baraset, Hazareebagh, and Bogra. The unhealthiness of Singbhoom, Pubna, Pooree, and Hazareebagh during the year was exceptional. With few exceptions, such as the central jails of Midnapore, Buxar, Bhagulpore, and Hazareebagh, every jail was more or less overcrowded at some time or other during the year. This was the case with nearly all the jails which proved most unhealthy, notably Rungpore, Chumparun, Pubna, Patna, Mozufferpore, and Bogra. Among the comparatively healthy jails, Bankoora, Alipore, Jessore, Maldah, Dacca, and Tipperah, were also greatly overcrowded. The unhealthiness of Rungpore jail is undoubtedly largely owing to overcrowding and insufficient drainage. Julpigoree owes its insalubrity to fault of site; Backergunge, to defects in construction.

Civil Justice.

THE usual statistical tables and returns will be found in the appendix.

The total number of suits before the High Court in its original jurisdiction during the year 1876 amounted to 2,001, against 1,414 in 1875 and 1,356 in 1874. Of these 1,136 were disposed of and 865 were left pending at the close of the year, against 795 and 772 cases at the close of the years 1875 and 1874 respectively.

On the appellate side the High Court sat for 241 days during the year 1876 and disposed of 7,304 appeals and applications, against 6,815 and 7,453 disposed of in 1875 and 1874 respectively: 4,505 cases were left pending at the close of 1876, against 4,326 and 3,634 at the end of 1875 and 1874 respectively. Among the appellate business disposed of 313 cases were regular and 2,799 were special appeals, while 1,183 were criminal cases. The miscellaneous orders on applications in and out of court amounted to 2,444. There was a slight increase in the number of regular and special appeals and of criminal cases coming before the court on the appellate side; and although the number of cases disposed of fell but little short of the number filed, the number of regular and special appeals pending at the close of 1876 was still very heavy, being 498 and 3,374 respectively.

The question of improving and reforming the appellate tribunals in Bengal by creating appellate benches in districts in the mofussil, which should be able rapidly and efficiently to dispose of the mass of appeals which now come before the High Court, and with which that Court are unable to deal in such a manner as to prevent the accumulation of large arrears, has for a long time been under the consideration of Government. The defects in the existing state of the law relating to civil appeals in the Lower Provinces, and the proposals made by Sir Richard Temple to remedy them by the constitution of divisional appellate courts, were detailed in the Administration Report for 1874-75.

It was a part of Sir Richard Temple's scheme for the establishment of divisional benches that provision should be made in the Bill (for amending the law of appeal in civil cases in the provinces under the Government of Bengal) for the establishment of appellate benches in the interior of the country, such benches to consist of at least two Judges, of whom one should be a covenanted Civil Servant, the other a Native Judge. This

has already been done in section 575 of the new Civil Procedure Code. It was not any part of Sir Richard Temple's proposal to interfere with the existing law and procedure in respect to the decisions of Small Cause Courts in suits the value of which does not exceed Rs. 1,000, in which no appeal is now allowed, or in respect of suits of the Small Cause Court type decided by the ordinary civil courts, except where the amount or value of the subject-matter of the original suit exceeds Rs. 500, or in respect of that class of rent-suits which are subject to special limitations in regard to appeal under the existing law. But it was intended that all other appeals, except those which are specified above, should be heard by the divisional appellate courts.

The Lieutenant-Governor has placed definite proposals before the Government of India for the introduction of the scheme in four circles out of the eleven which it is intended to construct. The question is still under consideration.

There was a great falling off in the number of cases instituted during the year 1876-77, as well as in the amount in litigation. Altogether 32,640 suits were brought, against 34,502 in 1875-76; and the amount in litigation was Rs. 14,42,611, against Rs. 15,82,873. The following statement shows the number of cases instituted, together with the value of the property in litigation, during each of the last five years:—

						Cases instituted.	Amount in dispute. Rs.
1872-73	34,843	16,23,110
1873-74	34,583	16,11,535
1874-75	34,983	15,70,142
1875-76	34,502	15,82,873
1876-77	32,640	14,42,611

The diminution in the number of suits was chiefly observable under the heads of goods sold and delivered, bills of exchange and promissory notes, money paid, money lent, money had and received, and account stated. Classified according to the value of the claims made, the number of suits instituted during the last three years was as follows:—

Value of suits.				1874-75.	1875-76.	1876-77.
Up to Rs.	50	29,063	28,711	27,030
" "	100	2,693	2,577	2,491
" "	500	2,768	2,671	2,600
" "	1,000	473	502	475
Above "	1,000	36	41	44

These figures show a marked decrease in the number of suits of the smaller values, which may probably be attributed to the decision pronounced by the High Court in April 1873, to the effect that the Court of Small Causes has no power to seize tiled huts in execution of its decrees. This ruling removed from the operation of the law an important item of security theretofore tendered by debtors, and the result was a falling off in the extent of the credit allowed them. The

full effect of the decision in question was not observed until the beginning of the past year, when limitation began to bar the institutions of suits brought on transactions which had been entered into on the faith of the debtor possessing a tiled hut. The influence of this ruling may also be traced in the diminished number of interpleader suits, which naturally decrease as restrictions are imposed on the execution of decrees. The number of cases instituted was probably also to some extent affected by the exclusion of touters or suit-brokers.

The total number of cases which came before the court for disposal was 33,806, of which 32,592 were disposed of, against 34,662 in 1875-76. In 13,990 of these judgment was given for the plaintiffs, and in 1,504 for the defendants. The number non-suited or struck off was 5,597, and 11,501 were compromised. Of the 1,214 cases pending at the close of the year 787 had been instituted towards the close of the year but were not returnable within that period, and 427 had been postponed after hearing in part. Five cases were referred by the First Judge for the opinion of the High Court under section 7 of Act XXVI of 1864. Of these two were returned for new trial, and in one the decision of the court was upheld. In one of the remaining two cases the decision of the court was reversed, and in the other it was partly confirmed and partly reversed.

The total number of after-judgment processes applied for was 8,809. Of these 5,699 were against the person. Only 2,689 of these warrants were executed. Altogether 3,110 processes for execution against the property of debtors were applied for, and of these 2,510 were executed. The executions under both these heads showed a decrease as compared with the figures for 1875-76. The number of bench warrants issued for the arrest of defendants before judgment has again decreased, being 42 as against 62 in the previous year.

The Distress Act I of 1875 worked satisfactorily during the year. The number of processes of distraint issued under the Act was 421, showing an increase of 28 as against the previous year, and the total amount of rent involved exhibits an increase from Rs. 27,417 to Rs. 32,743.

The receipts of the year from different sources amounted to Rs. 1,91,866, as against Rs. 1,99,256; while the total expenditure was Rs. 1,56,784. The net sum to be credited to the general revenues amounted to Rs. 35,082, as against Rs. 47,291 in the previous year.

The following table shows the totals of the various kinds of original civil suits instituted in the courts of the interior during the year 1876:—

INSTITUTED IN—				Suits for money.	Under rent law.	Other suits.	Total.
Small Cause Courts	47,423	47,423
Moonsiffs	"	128,320	122,771	34,465	285,556
Sub. Judges	"	1,787	694	1,779	4,210
District Judges	"	13	9	27	49
Revenue	"	7,119	7,119
				177,473	130,593	36,271	344,337

The table below shows the number of cases under trial and the number disposed of by the various classes of courts in 1876 :—

Class of Courts.			Total of suits for disposal.	Total disposed of.
Small Cause Courts	50,244	47,652
Moonsifs'	"	...	345,826	293,594
Sub. Judges'	"	...	6,571	4,608
District Judges'	"	...	298	153
Revenue	"	...	11,424	7,431
			<u>414,363</u>	<u>353,438</u>

The following statement shows the number of original suits, including Small Cause Court cases, but exclusive of cases in the Revenue Courts, instituted, disposed of, and pending in the civil courts for the last three years :—

			1874.	1875.	1876.	INCREASE OR DECREASE AS COMPARED WITH	
						1874.	1875.
Instituted	279,506	323,466	339,066	59,560 (Increase.)	15,600 (Increase.)
Disposed of	282,133	320,883	346,007	63,874 (Ditto)	25,119 (Ditto.)
Pending	35,945	43,493	40,416	4,471 (Ditto)	3,077 (Decrease.)

The steady increase in litigation which had taken place in the courts in the interior for some years past was fairly maintained in 1876. It was noticed in the Administration Report for 1875-76 that a temporary decrease observable in 1874 owing to exceptional circumstances had been followed by a very marked increase in 1875. In the past year no such exceptional circumstances were reported, nevertheless litigation resumed its original elasticity, and the figures for 1876 show not only a large increase (15,600) over those of 1875, but a considerable increase (59,560) over those of 1874 also. The increase was chiefly observable in the Moonsifs' Courts, the number of institutions being 285,556, against 274,623, in 1875. This increase in litigation may be attributed to the normal increase in the population, the more general distribution of wealth, the better education of the people, and the keener appreciation by them of their rights.

The outturn of the disposal of suits for the year 1876 was favourable, showing an increase of 25,119 over 1875 and 63,874 over 1874. The pending file was reduced from 43,493 cases in 1875 to 40,416. The number of original suits as well as of appeals pending more than one year was reduced from 594 to 310 notwithstanding that the courts were closed for some days at the end of the year in honour of the proclamation of the Queen's assumption of the title of Empress of India. Out of the total number of suits (346,007) in which the proceedings were brought to a close the Moonsifs disposed of no less than 293,594, against 271,810 in 1875. This increase in the number of suits disposed of was caused partly by the employment during a portion of the year of an extra staff of Moonsifs, 20 of whom were entertained for a period of about 3½ months, and partly by the exertions of the permanent staff.

The following statement shows the proportion per cent. which the different classes of suits have borne to each other during the last three years :—

Character of suits.	Total of 1874.	Total of 1875.	Total of 1876.	PERCENTAGE.		
				1874.	1875.	1876.
	No.	No.	No.			
Suits for money, &c.	116,304	125,075	130,070	45.734	44.927	44.875
Rent suits	101,146	116,585	123,507	39.774	41.878	42.810
Suits for immovable property	28,506	28,423	27,919	11.209	10.212	9.632
Suits for specific performance of contract	1,204	1,034	1,138	.479	.371	.392
Suits to declare and establish rights to real property, including pre-emption, foreclosure, &c.	3,296	3,214	3,663	1.296	1.155	1.263
Suits to declare and establish personal rights	1,430	1,343	1,362	.562	.484	.469
Suits for an account	692	769	595	.272	.276	.205
Suits relating to religious endowments	67	58	68	.026	.020	.023
Suits to set aside judgements, &c.	486	730	543	.191	.262	.152
Suits for dissolution of marriage	79	62	48	.031	.022	.016
Suits for enforcement of matrimonial rights	551	410	330	.216	.147	.113
Suits for partition	413	569	523	.162	.203	.180
Suits relating to shipping	1
Suits relating to religion and caste	129	109	81	.048	.038	.027
Total	254,306	278,391	289,848	100	100	100

The classified values of the suits disposed of are given below for the last four years :—

	1873.	1874.	1875.	1876.
Not exceeding Rs. 5	34,458	29,600	33,525	33,267
" " 20	93,870	85,513	95,376	102,751
" " 100	140,773	131,825	145,269	157,605
" " 500	40,118	35,935	38,253	42,116
" " 1,000	4,859	4,064	4,516	4,732
" " 5,000	3,228	3,026	2,996	3,003
" " 10,000	423	421	408	533
" " 1,00,000	267	285	245	337
Exceeding " 1,00,000	22	20	12	39
Total	318,018	290,694	320,900	344,383

There was a slight falling off in suits the value of which does not exceed Rs. 5, but there was an increase in the number of suits of all other classes the value of which is above that limit. The number of suits in which the value in dispute exceeded Rs. 1,000 during the last four years is shown below :—

1873	3,900
1874	3,752
1875	3,661
1876	3,912

The decrease observed since 1873 has almost been recovered.

There was a considerable increase in the number of decrees put in execution in consequence of the increase of litigation in 1875. The results are thus shown :—

YEAR.	DECREES EXECUTED.		Amount realized.		
	Completely.	Partially.			
			Rs.	A.	P.
1874	63,380	126,201	1,21,66,380	7	0
1875	60,201	140,887	1,19,87,061	15	7
1876	65,388	150,380	1,11,12,759	2	6

The following table shows the number of cases instituted, disposed of, and pending in the Small Cause Courts in the mofussil during the past three years :—

CASES.	1874.	1875.	1876.	Increase over 1875.
Instituted	37,542	45,352	47,423	2,071
Disposed of	37,658	45,000	47,652	2,652
Pending	2,182	2,533	2,552	19

There was an increase in the business of the Small Cause Courts, and although the total number of suits disposed of exceeded the institutions of the year by 229, the pending file left was heavier than before, owing to the more numerous institutions. Of the 2,552 pending cases, however, only 15 were of more than six weeks' standing.

The business of the appellate courts for the last three years is thus shown :—

COURTS OF APPEALS.		Total number of appeals for decision.			Total number of appeals disposed of—		
		1874.	1875.	1876.	1874.	1875.	1876.
Sub. Judges' Courts...		15,333	16,729	15,522	11,653	11,869	11,633
Collectors' " ...		619	408	591	571	371	520
District Judges' Courts	{ Civil	24,675	16,795	17,068	7,679	4,261	4,980
	{ Revenue	4,593	11,992	11,190	2,103	4,544	4,378
	{ From original jurisdiction.	42	68	41	31	57	34
High Court	{ Regular appeals from district courts.	685	693	795	311	255	306
	{ Special appeals	5,374	5,415	6,001	2,813	2,241	2,700
	Total	51,321	52,160	51,208	25,161	23,661	24,558

The number of appeals instituted in the courts in the interior during the past year was 20,422, against 19,830 in 1875, showing an increase of 592; and the number disposed of was 20,996, against 20,677, showing also an increase of 319. Notwithstanding this excess in the number disposed of there was a slight increase in the pending file, 9,449 cases remaining undisposed of at the close of the year, against 9,434 in 1875. As noticed above, however, a large reduction was effected in the number of appeals pending more than a year. These have been reduced from 392 in 1875 to 175 in 1876.

Registration.

THE returns of the past official year show that although registration in the aggregate has not retrograded, the increase has been small compared with the great strides made in the four years immediately preceding it. This circumstance is wholly due to a great falling off in registration in the populous and opulent districts of Backergunge, Noakholly, and Chittagong, which ordinarily contribute largely to the aggregate operations of the province, but which suffered so severely from the cyclone and storm-wave of the 31st October. The subjoined table exhibits the leading statistical data connected with registration during the past twelve years :—

YEARS.	NUMBER OF REGISTRATIONS.				Total receipts.	Total expenditure.	Surplus.	Number of registration offices.
	Affecting immovable property.		Other registrations.	Total.				
	Compulsory.	Optional.						
1865-66	49,910	20,590	27,683	98,183	Rs. 3,25,089	Rs. 2,25,066	Rs. 99,123	178
1866-67	101,422	49,346	31,391	182,159	3,19,754	2,25,951	93,803	182
1867-68	119,700	41,335	26,815	187,850	3,34,956	2,50,181	84,775	187
1868-69	125,438	42,794	45,739	213,968	3,67,271	2,99,099	68,172	172
1869-70	160,920	52,034	39,239	252,193	4,13,797	3,14,834	98,973	173
1870-71	159,963	49,862	31,888	241,713	3,88,688	3,11,825	76,863	180
1871-72	158,077	55,431	31,762	245,270	3,73,136	2,80,961	92,175	156
1872-73	174,788	67,130	37,162	279,080	4,35,319	3,04,782	1,30,537	168
1873-74	203,519	79,409	45,441	328,369	4,62,509	3,29,431	1,33,078	221
1874-75	250,340	98,970	74,563	423,873	5,52,325	3,86,953	1,65,372	246
1875-76	265,265	106,629	85,757	457,651	5,56,505	4,17,462	1,39,103	290
1876-77	268,125	104,436	93,013	465,574	5,66,882	4,30,168	1,36,714	310
Increase over previous year.	2,860	7,256	7,923	10,877	12,766	20
Decrease ditto	2,193	2,389

The registrations effected in Backergunge, Noakholly, and Chittagong during the past two years appear in the following statement :—

			1875-76.	1876-77.	Decrease.
Backergunge	38,635	34,080	4,555
Noakholly	21,461	17,951	3,510
Ohittagong	27,482	21,708	5,774
Total	<u>87,578</u>	<u>73,739</u>	<u>13,839</u>

It will be observed that even had registration remained stationary in these three districts the grand total for the year would have been 479,413 instead of 465,574, giving an increase of 21,762 instead of 7,923 on that of 1875-76.

Classified according as they refer to movable or immovable property, and, under the second head, according as their registration is compulsory or optional, the number of documents registered in each of the past two years was as follows:—

<i>Compulsory.</i>		1875-76.	1876-77.
Registrations affecting immovable property.	Instruments of sale, &c., of immovable property of value Rs. 100 and upwards	31,290	31,330
	Instruments of mortgage of immovable property of value Rs. 100 and upwards	34,545	34,647
	Perpetual leases	109,399	102,747
	Other leases under section 17, clause 4	87,096	95,616
	Other compulsory registrations	2,935	3,785
	Total compulsory registrations affecting immovable property	265,265	268,125
	<i>Optional.</i>		
	Instruments of sale, &c., of immovable property of value less than Rs. 100	71,400	67,765
	Instruments of mortgage of immovable property of value less than Rs. 100	28,684	29,604
	Leases for one year and less	2,649	2,140
Registrations other than that affecting immovable property.	Miscellaneous documents	3,896	4,927
	Total optional registrations affecting immovable property	106,629	104,436
	Total registrations affecting immovable property	371,894	372,561
	Obligations for payment of money	65,610	69,047
	All other registrations	18,544	22,234
Total of above		84,154	91,281
Number of wills registered		1,556	1,681
Number of written authorities		47	51
Total registrations		457,651	465,574

This table shows that there has been an increase of 1·7 per cent. in registrations affecting immovable property, and of 8·4 per cent. in other operations. In compulsory registration the increase has been 1·07, and in optional registration 2·6. The total increase compared with 1875-76 has been 7,923, or 1·7 per cent. The increase is chiefly remarkable in Jessore, Chumparun, Mymensing, Bhagulpore, Maldah, Monghyr, Furreedpore, Rungpore, Patna, and Rajshahye. The decrease appears most markedly in the returns for Chittagong, Backergunge, Noakholly, Tipperah, Lohardugga, and Midnapore. The

different provinces under this Government contribute to the total operations of the department in the following proportion:—Bengal proper, 78·1; Behar, 17·8; Chota Nagpore, 2·2; and Orissa, 2·0 per cent. The percentage of Behar was only 14·1 in 1875-76. The increase is in part only nominal, owing to the transfer of the district of Maldah from the jurisdiction of the Commissioner of Rajshahye to that of the Commissioner of Bhagulpore. In part it is attributable to special circumstances in Chumparun, which will be noticed further on.

The first remarkable feature in the comparative table above given is the decrease of 6,652 in the number of perpetual leases registered. The progress of the popularity of this class of engagement has been watched by Government for some years with interest. Since 1871-72, when the number registered was only 47,181, it has rapidly extended without any check until the year which has just elapsed. Though the system appears to be gradually making its way in Central and Western Bengal, it can only be said to have taken deep root in Jessore and the south-eastern districts of Backergunge, Furreedpore, Noakholly, and Chittagong. During the past year there was a considerable increase in 24-Pergunnahs, Nuddea, Moorshedabad, Maldah, and Furreedpore, and a very large increase in Jessore; while the three districts which suffered most from the cyclone show an aggregate decrease of 13,144, or nearly double the net decrease throughout the province. Whether this falling off is entirely due to the destruction of property and the general confusion and distress caused by the great physical calamity, or whether the anticipations expressed last year by the Registrars of Chittagong and Noakholly, that the system had nearly reached its limit, have been realized, cannot now be accurately determined. While the adjoining districts of Dacca and Tipperah, both of which suffered to some extent from the cyclone, show a slight decrease, those of Furreedpore and Jessore, in which some damage was also caused, show, the former a slight, and the latter a very considerable, increase. Government will have to wait another year before it can pronounce definitely on the progress of these leases in Eastern Bengal.

The number of term leases of small value registered during the year rose from 87,096 to 95,616. It is to be expected that registration under this, as under other heads, will year by year show some expansion. Disturbing local causes, however, not unfrequently account for more or less violent fluctuations in some districts. Thus the increase of 51 per cent. in Chumparun during the past year was explained by a sudden combination among the ryots of an indigo factory, followed by the formal renewal of their engagements on more favourable terms, and the expiry and peaceful renewal of the indigo leases under two other large factories in the district. In Rajshahye, where the increase was nearly 81 per cent., the stimulus was caused by some new settlements, and by the opening of two new rural offices. In Mymensing the increase was attributable to the fact that written engagements between landlord and tenant are taking the place of the informal agreements of former years—a most satisfactory solution of the long-pending differences between two contending parties whose real interests are identical.

The decrease in optional registrations of immovable property is almost solely noticeable in the returns of small sales. The fall is chiefly to be observed in the Presidency and Burdwan Divisions, where the people were the most ready to avail themselves of the reduction in the stamp duty on deeds of gift. It was formerly the practice to evade the payment of the stamp duty by describing gifts as sales for a nominal consideration. In 22 out of 42 districts there has been an increase in the optional registrations of bonds, and the gross number registered in the province was 69,047, against 65,610 in 1875-76. The net increase, however (3,437), is less than the increase in the one district of Jessore, where more than half the total number were registered, and where the registrations increased from 31,452 to 35,694.

In the minor operations of the department there has been a general increase. A small but steady advance is shown in the number of wills registered; but any great expansion under this head is improbable. Several instances occurred during the year of curious, and in some cases most improper, deeds being presented for registration. In one of these a woman executed a deed of gift of her female child in favour of a prostitute. In 13 cases only during the year did the civil courts give notice to the registering officers of the presentation of registered documents which the courts discredited. The Lieutenant-Governor has recently invited the co-operation of the High Court in this important matter, and the Hon'ble Judges have responded by the issue of a circular directing judicial officers to give notice in all cases in which there is strong *prima facie* evidence of fraud having been committed. The prosecutions instituted during the year numbered 38, and 35 persons were punished with imprisonment and 12 with fine for offences against the Registration Act. Heavy sentences were passed in the most heinous cases.

The subjoined statement shows the receipts and expenditure of the past four years calculated on the principle hitherto adopted:—

Finance.

			Receipts.	Expenditure.	Surplus.
			Rs.	Rs.	Rs.
1873-74	4,82,509	3,29,431	1,53,078
1874-75	5,52,325	3,86,953	1,65,372
1875-76	5,56,505	4,17,402	1,39,103
1876-77	5,66,882	4,30,168	1,36,714

The amount, however, given as the total of expenditure in each year does not include the charges for paper and for printing and binding the registers and forms. These charges aggregated Rs. 34,445-10-6 during the past year. The Public Works Department also expended during the year Rs. 23,294 on behalf of the Registration Department. The net surplus during the past year was therefore only Rs. 78,973-9-6. The measures taken to check the rapidly-growing expenditure of this department and to place its finances in a more satisfactory condition will be detailed in the next report.

There were altogether 310 offices open at the close of the year, against 290 at the close of 1875-76. Eighteen of the new offices were placed under rural sub-registrars in the interior. Two new sub-district

offices were opened and ten sub-district offices were transferred from the charge of the sub-divisional officers to that of rural sub-registrars.

The reports received on the working of the Mahomedan Marriage Registration Act have not been generally favourable. At the close of the year the Act had been extended to 14 districts, and 77 offices were at work. Only 2,234 ceremonies were registered during the year.

Municipal Administration.

THE administration of the Calcutta municipality during the greater part of the year 1876 was in the hands of the **CALCUTTA MUNICIPALITY.** Justices appointed under the old law. The new Corporation, as constituted by Act IV (B.C.) of 1876, was installed in the month of October of that year. The Commissioners are now 72 in number, of whom 24 are appointed by Government and the remaining 48 are elected by the rate-payers. For the purposes of the election the town was divided into 18 wards, and the election was conducted under rules prescribed by Government in accordance with section 17 of the Act. The elections were held on the 1st September 1876, and created little interest or excitement, there being no contest in 8 out of the 18 wards. Four gentlemen having each been elected for more than one ward, a supplementary election was held on the 13th September. The number of Commissioners having been completed by the appointment of the Commissioners nominated by Government, the first meeting of the Municipality under the new constitution was held on the 23rd October 1876. The office of Chairman of the Corporation was held by Sir Stuart Hogg from the 1st January to the 13th November 1876, and from that date to the close of the year by the present officiating Chairman, Mr. O. T. Metcalfe.

The financial results of the administration of the past year were, on the whole, satisfactory. The actual revenue collected during the year was Rs. 25,43,216, or Rs. 67,015 more than was anticipated in the budget estimate, and Rs. 32,541 more than was realized in the previous year. The increase was mainly due to the large expansion of the lighting-rate receipts. The receipts under the capital account amounted to Rs. 4,78,820, including two loans from Government,—one for drainage, amounting to Rs. 2,39,400; the other for additional filters at Pultah, aggregating Rs. 1,45,000. The aggregate amount which was at the disposal of the Corporation was as follows:—

			Rs.
Receipts on revenue account	25,43,216
" " capital account	4,78,820
" " store and advance account	2,37,246
Cash balance	1,76,469
		Total	34,35,751

The expenditure of the past year is shown in the following table:—

				Rs.
On revenue account	25,82,596
On capital account	6,23,095
		Total	...	<u>32,05,691</u>

The expenditure on revenue account was Rs. 1,45,263 less than the estimate, and Rs. 4,78,159 less than that of 1875. The decrease, which was under establishment, was only nominal, as the payment of the salaries for January 1876 was made in December 1875, on account of the holidays granted on the occasion of the visit of His Royal Highness the Prince of Wales.

The total loan liabilities of the Corporation at the close of the year amounted to Rs. 1,50,67,395, bearing annual interest amounting to Rs. 7,34,269, and involving an annual contribution of Rs. 2,76,908 to the sinking fund. On the 31st December 1876 the total amount at the credit of the sinking fund was Rs. 12,89,485.

The collecting agency was during the year placed on a more satisfactory footing. Salaried collectors, with a subordinate establishment of municipal servants, were substituted for a collector who was paid by commission, and who made his own arrangements for collecting the rates. Under the new law, which came into force on the 1st July, the police and lighting-rates became payable in advance, so that the demand for the year included five quarters instead of four. Although the demand was thus enhanced, and in spite of some difficulty arising from the new practice of charging the water-rate, now payable by occupiers, and not by owners of premises, in the same bill with the police and lighting-rates, the collections under these heads were very satisfactory. They amounted in both cases to 88 per cent. of the demand, as against 87 per cent. realized in 1875. The house-rate assessment was one per cent. lower than in the previous year. Under this head also the collections were one per cent. on the demand in excess of the amount realized in 1875. The collections of the water-rate were less satisfactory, as under the new law the rate is ordinarily leviable from occupiers, and not from owners as before, and some difficulty has been found in realizing the rate due from occupiers who have vacated premises, leaving the public demand unsatisfied. Under section 99, too, the municipality can only require the owner to pay the fourth of the water-rate recognized as his share when the premises have been unoccupied during an entire quarter. When, therefore, premises happen to have been occupied for any part of the quarter and unoccupied for the remainder, no water-rate at all can be realized from the owner for the period of vacancy.

The cost of the repair of roads exceeded the budget estimate of Rs. 3,00,000 by Rs. 20,380. This was owing to the postponement of the drainage works for 1875-76 till after the year 1876 had commenced. The result was that some of the operations had to be conducted in the rains, and the cost of road scraping was considerably enhanced. The greater part of the stone metal used was obtained from the Rajmehal quarries.

This indigenous stone has been found to be better adapted for resistance to heavy traffic than imported stone ballast.

The daily average number of gallons of filtered water supplied to the town was 6,541,154, an increase of 335,612 gallons over the daily average of the previous year.

Water-supply.

Of the four additional filters at Pultah, for which the Government last year sanctioned a loan of Rs. 1,45,000, three have been completed since the close of the year. The supply was extended to 705 additional houses, and two hydrants were placed near the river-bank for the supply of the shipping. The quality of the water supplied was excellent.

Three-quarters of a mile of brick sewers and ten miles of pipe sewers were laid down during the year. The

Drainage.

construction of a mile more of masonry sewer will complete the drainage system. Of pipe sewers, however, 47·34 out of 135·17 miles projected have still to be laid down. It is of much importance that this great work should be rapidly pushed on to conclusion. The condition of the open drains which still remain to be replaced requires serious attention; and until these receptacles of stagnant filth are filled or covered up, much discomfort and ill-health must be caused. As many as 2,503 premises were connected with the sewers during the year. This is a very satisfactory result, and its good effects will be more marked when the extension of the water-supply shall render complete and constant flushing practicable.

The conservancy of the town was generally well attended to. The

Conservancy.

old system of tollah mehters, which was not very satisfactory, has been superseded since the beginning of the current year by one more suited to the requirements of the town and more capable of effective control.

An interesting feature in the year's administration was the

Sanitation.

subjection of the town to a careful sanitary examination at the hands of the Health Officer, who instituted particular inquiries, investigated the general sanitary history of the town, and collected statistical data on a sound principle.

It has been a matter of perplexity to inquirers that while the death-rate of Calcutta has been so low as to give it a high place for salubrity among the great cities of the world, it was well known that it contained large areas which presented conditions of filth, overcrowding, and bad ventilation, which ought, *prima facie*, to lead to very different results. The first special inquiry held by Dr. Payne into an outbreak of cholera suggested the solution of this anomaly, and the results of the census, which was taken immediately afterwards, confirmed his conclusions. It was found that only 28 per cent. of the inhabitants of Calcutta were born in the town, while the number of males, as compared with females, was 262,455 to 146,581. The town population, therefore, is not one of local growth. The great mass of the male population is composed of migratory labourers and artisans, who visit Calcutta for a time and return to their homes periodically. The females, on the other hand, though in many cases they move with the males, are more or less a fixed population. This is made clear by the statistics of the female population. Considerably less than half of the women in Calcutta are returned as married, while the number of widows and of women

not described is nearly as large as that of the married females. The men for the most part are enabled, by the temporary nature of their connection with Calcutta, to betake themselves to their homes when they are attacked by any but immediately prostrating sickness. Except, therefore, from acute diseases, such as cholera, only a small proportion of males actually die in the town. This theory accounts for the remarkable difference in the male and female death-rate among both Hindoos and Mahomedans. The ratio of male deaths to every 1,000 of population is 28·2 and 22·8, and that of female deaths 36·7 and 41·3 respectively. It may be considered, therefore, as established that the hitherto recorded death-rate among Hindoos and Mahomedans in Calcutta, even so far as the figures are accurate, fails to convey a correct view of the healthiness or unhealthiness of the city.

A census of the inhabitants of the town was taken on the 6th April 1876 under the supervision of Mr. H. Beverley, of the Civil Service, whose services were placed by Government at the disposal of the Justices for that purpose. In taking the census recourse was had to the agency of the police, assisted by a large number of paid enumerators, as this was found to be the least expensive, and at the same time most effective, mode of conducting the census of so large a population as that of Calcutta, composed of different races. The subjoined table gives the number of the population of the town, the fort, and the port :—

	Males.	Females.	Total.
Town of Calcutta	262,455	146,581	409,036
Fort William	2,408	395	2,803
Port of Calcutta	17,643	53	17,696
Grand Total ...	282,506	147,029	429,535

The following table shows the number of people of each religion inhabiting the town of Calcutta :—

RELIGION.	POPULATION.		
	Males.	Females.	Total.
Hindoos	177,582	100,642	278,224
Mahomedans	89,539	35,017	123,556
Other religious persuasions	16,385	11,370	27,755
Total ...	282,506	147,029	429,535

In 1876 there were 7,453 births registered in Calcutta. The following table gives the necessary details :—

Races.	Number of births.
Non-Asiatics	292
Mixed races	575
Hindoos	4,596
Mahomedans	1,963
Others	27
Total ...	7,453

This yields a birth-rate of 17·3 per 1,000 of population.

The following table shows the mortality among the different races :—

RACES.	DEATHS.			RATIO OF DEATHS PER 1,000 OF POPULATION.		
	Males.	Females.	Total.	Males.	Females.	Combined.
Non-Asiatics	171	36	207	26·3	12·8	22·2
Mixed races	276	271	547	50·2	46·9	48·5
Hindoos	5,007	3,695	8,702	23·2	36·7	31·3
Mahomedans	2,020	1,446	3,466	22·8	41·3	28·

Calcutta is really more healthy for Europeans than even these figures show. They include deaths among sailors, due not to the effects of the climate, but to exposure and reckless excess. Not a single death occurred among men of this class in the Presidency jail during the year. Among those in the shipping, however, the death-rate was 51 per 1,000. The death-rate among the troops in the Fort was only 7 per 1,000. Leaving the shipping population aside, a rate of 18 per 1,000 is obtained for male residents of the white races. It is true that the great bulk of the European population of Calcutta is composed of persons at the middle periods of life; and from this it is sometimes argued that a favourable death-rate is necessarily to be expected. It is forgotten, however, that if the very advanced ages are little represented, so is the period between 10 and 20 years, when the death-rate in England is lowest. The death-rate among European females in Calcutta is very low, and the healthiness of young European children is remarkable. In the European Female Orphan Asylum, where the mean daily number of children maintained is 60, there have been only three cases of fatal illness during the last nine years. On the whole, the result is that the European quarter of Calcutta is shown to be very salubrious, and the climate to be distinctly favourable to European life. The mixed races form the most stable portion of the population. Their death-rate per mille is 48·5. In mortality from cholera and in infant mortality, perhaps the only two cases in which a fair comparison can be made, their death-rate is below that of the natives. It must also be recollected that many Eurasians are housed and live as carefully as Europeans. There can be no reasonable doubt that the true native death-rate considerably exceeds that of these mixed races, and the Health Officer places it so high as 50 per thousand.

The gross income of the Suburban municipality during the year was Rs. 4,28,054, or Rs. 4,546 less than the estimate, and Rs. 6,342 less than the total receipts of the previous year. The collections of the house-rate were satisfactory, and the unrealized balance on account of the year was only Rs. 1,655 out of a total demand of Rs. 2,43,000. The assessment operations of the year resulted in an increase of Rs. 2,802 a quarter, which more than compensated for the loss of revenue from desertions and deteriorations

in value during the previous year. The average rate levied in the area taken up by the assessor was Rs. 24 on each bricked house, Rs. 2-5 on each thatched house, and Rs. 4 on each garden. Many of the thatched houses in the area in question were used as store-houses and for other trading purposes. The collections on account of house-scavengering fell short of the estimate by Rs. 13,413. The advance account showed a balance outstanding of Rs. 597 only at the close of the year. The expenditure of the year amounted to Rs. 4,32,054, against an estimate of Rs. 4,82,600, a saving having been effected under nearly every head.

The question of the improvement of the water-supply in the suburbs was carefully considered by the Commissioners during the year. Various projects for the construction of new, or the improvement of existing tanks were discussed at different times, though, owing to the financial considerations involved, no particular plan was definitely adopted. Arrangements are now in progress for the extension of the Calcutta water system to the suburbs.

The registration of births was not conducted with success, the returns showing an average birth-rate of 15·27 only per mille. The average mortality among the different races was 51·46 per mille, or 50·12 for males and 53·36 for females. The death rate ranged from 68·47 among Christians and 55·16 among Hindoos to 45·36 among Mahomedans and 17·54 among other races. In Calcutta the mortality among the different classes of natives is 31·3 for Hindoos and 28 for Mahomedans. These figures are quite in keeping with the respective characters of the native populations, that of Calcutta being generally migratory, while that of the suburbs is comparatively fixed.

The new Municipal Act V (B.C.) of 1876 came into force on the 1st July 1876. It repealed all the old Acts relating to municipalities and consolidated their provisions into one single Act. It classified the several municipalities in the province into four distinct classes, according to the number of their population, and gave power to the Lieutenant-Governor to transfer a municipality from one class to another.

Including the Suburban Municipality, the number of municipalities of the several grades in the interior of Bengal was as follows:—

First class municipalities	24
Second ditto ditto	97
Unions under chapter III of Act V (B.C.) of 1876	70
Stations under chapter IV of the Act	2
Total						193

The number of municipalities of the first class remained the same as in last year. But two new municipalities were added in the second class by the raising of the unions of Kheerpoy and Ramjeebunpore, in the district of Midnapore, to the status of second class municipalities. There was also a decrease of one in the number of unions, caused by the withdrawal of the village of Patookhally in Backergunge from the operation of chapter III of the Municipal Act in August last. The number of stations remained the same as in last year.

Constitution of committees.

The constitution of the committees of the several municipalities was as follows :—

CLASS OF MUNICIPALITIES.	1876-77.			
	Europeans.	Natives.	Officials.	Non-officials.
First class	176	272	155	235
Second class	263	907	326	844
Unions	12	501	24	489
Stations	14	8	4	18
Total ...	465	1,688	509	1,644

Compared with the figures of last year, there was an increase of 286 names in the number of Municipal Commissioners. The increase occurred both in the number of European and Native Commissioners, being an addition of 71 to the number of the former and of 215 to that of the latter. The attendance of Commissioners at the meetings of the committees was regular, and many evinced a fair amount of interest in the affairs of their respective municipalities.

The elective system was in operation in the municipalities of Burdwan, Serampore, and Kishnaghur. The number of elected Commissioners in the three municipalities was 42. In Kishnaghur the elective system worked satisfactorily. The meetings were punctually attended, and considerable interest was shown in the work of the municipality.

Income.

The receipts of the various municipalities classed under the several heads were as follow :—

Receipts.

	FIRST CLASS. MUNICIPALITIES.		Second Class Municipalities.	Unions.	Stations.	Total.
	Suburbs of Calcutta and Howrah.	Towns in the interior.				
	Rs.	Rs.	Ra.	Rs.	Ra.	Rs.
Rate upon owners according to the yearly value of houses and lands owned by them.	3,95,193	3,78,276	7,73,469
Tax upon occupiers of holdings within the town according to their circumstances and the property to be protected.	4,22,912	1,12,450	16,978	5,52,340
Tax upon carriages, carts, horses, and elephants.	37,705	44,124	3,471	979	968	87,247
Fines and fees ...	14,504	19,295	8,705	1,016	976	44,546
Pounds, ferries, and tolls ...	9,584	1,05,818	31,310	12	1,46,624
Rent of houses, gardens, and markets belonging to municipalities.	804	26,994	7,589	2,720	38,107
Other sources, including grants from provincial funds.	1,64,723	50,622	19,621	10,983	1,224	2,47,233
Total ...	6,22,513	6,25,129	4,93,508	1,28,210	20,206	18,89,566

As compared with the receipts of the previous year, there was an increase under each of the first three heads, which comprise taxation proper. The total increase under these heads amounted to Rs. 71,837, the figures being Rs. 14,13,056, against Rs. 13,41,219. The total income of all the municipalities exceeded that of the previous year by Rs. 31,600. The increase was due partly to the alteration in the mode of assessment in the town of Comillah, and partly to revision of assessment in others. In the town of Comillah the tax levied was changed, on the representation of the Municipal Commissioners, into an assessment according to the circumstances of the people and the property to be protected.

The following table shows the several heads under which expenditure was incurred in the municipalities of the several classes during the year:—

Expenditure.

	FIRST CLASS MUNICIPALITIES.		Second Class Municipalities.	Unions.	Stations.	Total.
	Suburbs of Calcutta and Howrah.	Towns in the interior.				
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Establishments	72,712	61,109	58,372	15,414	3,348	2,10,955
Police	97,458	1,03,522	1,95,031	61,743	3,652	5,25,006
Conservancy	74,300	1,10,379	50,870	12,021	4,312	2,52,491
Roads	1,45,556	1,43,655	98,474	17,649	5,318	4,10,652
Buildings	4,064	20,560	5,874	3,246	103	31,847
Works of public utility ...	98,861	48,507	21,140	4,284	416	1,73,208
Miscellaneous and contingent charges.	1,31,235	61,300	45,345	8,843	2,561	2,52,284
Total	6,24,195	6,12,032	4,73,706	1,20,800	19,710	18,56,443

The above figures show a total expenditure of Rs. 18,56,443, against Rs. 18,77,754 in the previous year, or a decrease of Rs. 21,311 in the expenditure of the year under review. The decrease was chiefly under the heads of establishment and conservancy. The expenditure on account of police was Rs. 3,326 over that of 1875-76, the figures being Rs. 5,25,006, against Rs. 5,21,680.

Marine.

Vessels of the Bengal
Marine.

DURING the year under review the following
was the number of vessels belonging to the Bengal
Marine :—

Sea-going steamers	2
Pilot brigs, survey vessels, light-ships, buoy vessel, boats, &c.	30
River-going steamers	6
Flats and barges	4
Steam launches	5

There were also 10 famine steamers and 13 flats. The pilot vessels and light-vessels were in good condition. The reserve pilot vessel *Guide*, which was condemned last year, was sold. The number of light-vessels was raised from 5 to 6. The additional light-vessel *Canopus*, constructed in England; was on the 10th July 1877 placed at the entrance of the river Hooghly between the Lower Gasper and the Eastern Channel light-ships for the purpose of exhibiting an additional light. In consequence of the light-house on the Krishna Shoal in the coast of Burmah having been washed away, the floating light-vessel *Star* was, in accordance with the orders of the Government of India, sent there to supply the place of the light-house. The river survey flotilla was reorganized as follows:—the river surveying vessel *Kedgerie*, the assistant river surveying vessel *Marie*, and four row-boats, were replaced by the steamer *Clyde* and the steam launch *Tryon*, and famine (paddle) steamer No. 3 was replaced by famine (screw) steamer No. 4. The buoy vessel *Dolphin*, which belonged to the old service, was retained.

The English Merchant Shipping Act of 1876 came into force within the year of report. In accordance with the wishes of Her Majesty's Government measures were taken to give as much publicity as possible to those provisions of the Act which affect vessels in Indian ports and seas, and especially to section 24, prohibiting the importation into the United Kingdom of timber as deck cargo during the winter months.

In the year under report the Pilot Service numbered 70 members, that being the strength to which it was reduced last year, and which it is intended to maintain in future. Forty-seven pilots belong to the covenanted service, and 23 are licensed pilots. Of the 47 service pilots, 33 were actually running, 3 were in command of pilot vessels, 10 were on leave, and 1 was employed on staff duty. The 23 licensed pilots were all actually running, so that altogether 56 pilots, or two less

than last year, were available for service on vessels entering and leaving the Hooghly. This number of 56 running pilots was considered by the committee of 1872 to be sufficient for the working of 2,000 vessels in the year, allowing an average of four days as the period for taking a ship up or down the river. The actual number of ships piloted during the year, including 28 pilot vessels and light-vessels, amounted to 2,310; but as the time now occupied in the pilotage of each vessel is much shorter than was allowed for in the committee's estimate, there seems no reason to doubt that the number of 56 running pilots is sufficient for the work of the port, provided that proper arrangements are made for sending a sufficient supply of them down to the Sandheads to await the arrival of incoming ships. The scheme proposed by this Government for recruiting the pilot service has been accepted by the Secretary of State. Leadsman apprentices will in future be selected from the training ships in England, and no more appointments will be made in this country.

The scheme for the re-organization of the pilot service, which was noticed in last year's report as having been submitted for the approval of the Government of India, came into operation during the year. The committee which was appointed in 1873 to consider the details of the question recommended that the strength of the service should be fixed at 70 members, of whom 12 should be branch pilots, 34 masters, and 24 mates, and that the tonnage allotted to each grade should be on the following scale:—

Branch pilots over	1,300 tons.
Masters over 800 up to	1,300 "
Mates up to	800 "

As, however, there were 51 pilots actually working in the masters' grade, the acceptance of this scheme would have involved the degradation to mates' tonnage of 17 masters, most of whom had been in the masters' grade for several years, while the large number of mates would have caused a serious stoppage in promotion. It was therefore determined that for the present all pilots actually running as masters should be permanently promoted to that grade, and that in future the service should consist of 12 branch pilots, 40 masters, and 18 mates, the large grade of masters being at the same time divided into the two classes of seniors and juniors, and the scale of tonnage for each being regulated with the object of guarding against the danger of a large vessel being allotted to an inexperienced junior pilot. The scale of tonnage was consequently fixed as follows:—

Branch pilots over	1,300 tons.
Senior masters over 800 up to	1,300 "
Junior masters over 800 up to	1,175 "
Mates up to	800 "

At the same time the reduction in the numbers of the service by 30 per cent. (the previous number of pilots having been 100) enabled the Government to make a deduction of 15 per cent. from the pilotage dues, with the object of balancing the receipts and expenditure of the port, without involving any hardship to the pilots, whose earnings under the new arrangement have been considerably higher than they were before the changes took effect.

A considerable increase was apparent both in the number of vessels and in the gross tonnage, which was due for the most part to the number of short voyages to and from the ports of the Madras coast undertaken by steamers and sailing vessels exporting rice from Bengal. A similar expansion of the traffic of the port was observable in a less degree in 1874, when distress prevailed in Behar and rice was largely imported from British Burmah. It was noticed in the Administration Report for 1875-76 that the decrease in the number of vessels entering and leaving the port was entirely in steamers, the number and tonnage of sailing vessels showing an increase. During the past year the increase in the number of steamers was 277, and in the number of sailing vessels 185. The average tonnage of steamers was slightly less than in the previous year, but there was a considerable rise in the average tonnage of sailing vessels.

The following statement shows the number of sailing vessels and steamers that entered and left the port in the last two years:—

		1875-76.	1876-77.
Arrivals	{ Number of steamers ...	406	552
	{ Ditto of sailing vessels ...	508	609
Departures	{ Number of steamers ...	405	536
	{ Ditto of sailing vessels ...	501	585
Total tonnage, inwards and outwards, of steamers		1,454,264	1,945,577
Average tonnage of steamers		1,793	1,788
Total tonnage, inwards and outwards, of sailing vessels		1,105,001	1,349,374
Average tonnage of sailing vessels		1,095	1,130

Of the steamers shown in the above table, the following are the numbers which passed through the Suez Canal in each of the two years:—

	1875-76.	1876-77.
Arrivals	147	161
Departures	134	147

Each branch pilot piloted on an average 5.35 ships a month. For master pilots the monthly average was 3.60 ships, and for mate pilots 2.94 ships a month. The pilot committee of 1872 considered that the strength of the pilot service should be fixed at such a number as would allow each pilot an average of three ships a month. It was clear therefore that the recent reorganization of the service had operated to raise the average earnings of a pilot considerably above the scale which the committee held to be adequate, and that the reduction of 15 per cent. from the pilotage fees had not afforded any reasonable ground of complaint.

There were 32 cases of grounding during the year, being 13 less than last year and 36 less than in 1873-74. In 29 cases no damage was done, two vessels were totally lost, and a third was dismantled and obliged to put back into harbour. Marine courts were held in the two cases of total loss. In one case the pilot in charge was acquitted, while in the other, that of the *Cawbor Castle*, the pilot was found guilty of unskilfulness and

was dismissed. There were seven collisions, but considerable damage was done only in one case. Departmental courts of inquiry were held in two cases of grounding and one of collision. Special courts under section 4 of Act IV of 1875 were convened to inquire into the loss of the *Asia* by fire while at anchor in the port, and of the *Prince Waldemar* on the Roy Mutlah Sand. In the former case the court found that the fire was accidental, and in the latter that the ship was 30 miles out of her reckoning when she struck. The general conduct of the pilot service was good throughout the year. Considering the increase that took place in the number and tonnage of vessels, the crowded state of the port, and the great length and draught of water of the steamers built for the Suez Canal trade, it was satisfactory to find so few cases of grounding and so few collisions of a serious nature. No changes of any importance took place in the navigating channels of the river during the year.

The system of quarterly examinations for certificates of competency worked well during the year. It was urged that the examinations were held at too long intervals, and that this bore hardly upon young officers, whose promotion was delayed thereby. On this point, however, the Government of India had expressed a wish that the examinations should be held half-yearly or quarterly, and it was obvious that when a large body of examiners had to be assembled there would be much practical inconvenience in holding examinations at shorter intervals than three months. The Lieutenant-Governor was therefore unable to reconsider the decision which had been previously arrived at.

The *Vulcan* anchor-vessel was employed during the year in recovering lost anchors and chains, and also rendered assistance to the River Survey Department both in the Hooghly and on the Orissa coast. The cost of the establishment of the vessel amounted to Rs. 5,208, and Rs. 959 were paid to the crew for salvage. The stock in hand of recovered anchors and chains was estimated to be worth Rs. 5,514. Although the vessel was employed during a part of the year on survey duties, and in spite of a serious misunderstanding with the crew, which resulted in the suspension of the commander, the income, excluding the value of the stock in hand, exceeded the expenditure by Rs. 1,828. The houses of refuge were visited several times in the year, and were thoroughly refitted and replenished with stores. Two houses were entirely rebuilt. An unusually large amount of work was done in the Government Dockyard and Steam Factory during the year.

The silting up of the foreshore of the dockyard formed the subject of a separate correspondence with the Marine Department of the Government of India and with the Port Commissioners. Some delay was occasioned by the reluctance of the Port Commissioners to commence dredging so long as Fort Point remained in its present condition. But it was explained to the Commissioners that it was not likely that any works would be undertaken at Fort Point of such a kind as materially to affect the river below the Point; and they have since taken measures for the removal, by means of the dredger, of the accumulation of silt complained of by the Marine authorities.

The Commissioners of the Port of Calcutta now fulfil duties of a threefold character under different Acts. These are—

Calcutta Port Trust.

- (1) The work of port improvement under Act V (B.C.) of 1870.
- (2) The work of port conservancy and harbour management under Act XII of 1875.
- (3) The management of the Hooghly floating bridge under Act IX (B.C.) of 1871.

In connection with the operations of port improvement, the Commissioners had up to the 31st March 1877 expended on new works the sum of Rs. 71,82,288. Of this they had raised Rs. 52,87,187 by loans from Government, and had provided Rs. 18,20,517 from their current revenues, the balance being made up by a sum of Rs. 74,584 contributed by Government for the new Strand Road. Up to the close of the year under review the total sum borrowed by the Commissioners from Government (though not all spent) was Rs. 53,24,100. They had repaid of this from revenues Rs. 3,70,585, leaving a balance of Rs. 49,53,515 still due. They had paid as interest up to date Rs. 6,74,113. The total profits of the Commissioners up to the end of 1876-77 aggregated Rs. 22,74,559, of which they had spent Rs. 17,87,706 on new works and Rs. 3,70,585 in repayment of loans, the rest being devoted to the creation of a jetty reserve fund and of an insurance fund against damage to goods at the jetties, and the cash balance.

During the year of report the Commissioners laid out on new works Rs. 9,77,430, expended as follows:—

	Rs.
On improving jetties	17,680
On new office building	1,27,116
On new machinery and plant	74,779
On extension of inland vessels' wharves, construction of tramway, and new river-side road ...	7,57,855

Their net revenue for the year in this department of their operations was Rs. 3,97,602, and their gross receipts (other than loans, &c., from Government) Rs. 11,06,034. The difference between the gross and net revenue represents outlay on establishments, interest, repairs, and working expenses, &c.

The new river-side road and inland vessels' wharves were completed during the year of report, and the whole river-bank from Chandpal Ghât to the northern boundary of the port, with the exception of the frontage of the East Indian Railway at Armenian Ghât and of the Eastern Bengal Railway at Chitpore, was thus placed in the hands of the Commissioners. The tramway to connect the inland vessels' wharves with the Eastern Bengal Railway was completed as far as Armenian Ghât, so as to open direct communication between the Eastern Bengal Railway and the whole line of import and export sheds. When the movable bridge across the canal at Chitpore is ready, the trains will run direct to the Eastern Bengal Railway station at Chitpore, instead of along the Municipal Railway as at present. The other works carried out during the year were the completion of the new Burning Ghât, the pitching

of the slope and improvement of the inland vessels' wharves, the extension of the jetty-heads to suit long steamers, the provision of additional engines and cranes, and the completion of the 30-ton floating crane. The new office building was also nearly finished. The dredger was employed at the jetties and inland vessels' wharves for 192 days during the year, and dredged 2,471,500 cubic feet at a net cost of Rs. 22,868, or Rs. 9.25 per 1,000 cubic feet. All the berths in which silting had taken place were cleared out to a depth of 22 feet, and the jetties were thus fully utilized throughout the year.

The income and expenditure of the jetties for the last six years have been as follows:—

			Income.	Expenditure.
			Rs.	Rs.
1871-72	3,63,706	2,04,778
1872-73	4,09,440	2,43,911
1873-74	4,21,774	2,68,413
1874-75	4,82,983	3,39,997
1875-76	5,44,380	3,70,758
1876-77	6,04,090	4,19,047

The net revenue, therefore, for 1876-77 amounted to Rs. 1,85,043,

Working of the jetties. as against Rs. 1,73,622 in the previous year. There

was a considerable increase in the expenditure under salaries and working expenses; but this was counterbalanced by enhanced receipts from shipping charges and overtime allowance; and the bulk of the increase under the head of working expenses consisted of an exceptional charge of Rs. 25,702 for the value of 11 bales of raw silk accidentally lost in shipment. The Commissioners have since formed an insurance fund to meet such losses.

In 1874-75 the attention of the Commissioners was drawn to the failure of the jetties to attract export cargo. In 1875-76, however, the receipts on this account rose from Rs. 7,667 to Rs. 29,020, and in the past year Rs. 86,175 were realized from export cargo (chiefly hides and grain) passing through the jetties. During the past year 192 vessels, representing a gross tonnage of 304,218 tons, made use of the jetties; the average length of each vessel's detention being 10.2 days, and its average payment Rs. 204. For 33 vessels no room could be found at the jetties at all; 53 vessels were delayed on an average three days each before they could be admitted; and 46 vessels were compelled to leave the jetties before they had completed loading. Proposals for the construction of an additional jetty have been submitted to the Government of India.

During the year the cranes were at work for 54,292 hours, or nearly 15,000 hours more than in 1875-76. This increase was chiefly due to the larger number of vessels using the jetties, and in part to the growing demand for night work in order to secure greater despatch. At the same time the cost of working the cranes was reduced from 14 annas 10 pies to 10 annas 2 pies per hour. The hourly cost of working hydraulic cranes is 7 annas, while steam cranes cost Re. 1-0-3. The substitution of hydraulic for steam cranes was therefore the means of effecting a considerable saving.

The net revenue derived from the inland vessels' wharves rose from Rs. 1,50,163 in 1875-76 to Rs. 1,94,279 in the past year in consequence of the unusual activity of the rice trade, arising from the demand of the famine districts of Madras and Central India. The charges for interest and repairs were considerably higher than in previous years; but this was only the natural result of the recent extension of the wharves to the northern boundary of the port.

The following statement shows the collections at the various wharves during the last two years:—

Wharf.			1876-77.	1875-76.
			Rs.	Rs.
Lower wharf	72,777	54,557
Grey's „	1,83,934	1,40,880
Schalch's „	91,004	76,925
Temple's „	28,885	22,108
Total	3,76,570	2,94,470

Within the same period the largest income was derived from the following articles:—

		1876-77.	1875-76.
		Rs.	Rs.
Grains	1,26,120	63,008
Jute, hemp, &c.	54,747	50,541
Seeds	46,575	55,920
Building materials	14,987	14,537
Gunny-bags	10,053	9,199

The receipts from grains were double those of the previous year; there was a slight rise in jute and hemp, and a slight fall in seeds; and the other two items yielded much the same as in 1875-76.

The gross receipts on account of the Strand Bank lands rose from Rs. 1,01,317 in 1875-76 to Rs. 1,07,928 in the year under report; but the net revenue fell from Rs. 19,432 to Rs. 18,279, owing for the most part to the enhanced expenditure under the head of repairs.

The income of the Harbour Department amounted in the past year to Rs. 5,24,806, and the expenditure to Rs. 4,66,062—giving a surplus revenue of Rs. 58,844, as against Rs. 4,853 realized in 1875-76. Of this amount, however, Rs. 41,019 came from the sale proceeds of the wreck of the *Asia*, which were credited in the Commissioners' accounts pending a final adjustment of the claims against the vessel.

Only nine accidents occurred in 6,783 operations of haulage, while there was only one total loss of any vessel in the port,—that of the *Asia* by fire, and for this the Harbour-Master's Department was not to blame. This case was inquired into by a special court appointed under section 3, Act IV of 1876, and two of the crew, who caused the fire by taking an unguarded lamp into the hold, were convicted and fined for a breach of port rules.

The receipts of the Hooghly Bridge in 1876-77 amounted to Rs. 4,21,038, and the expenditure, including interest and sinking fund, and the purchase of the ferry steamer *Howrah*, to Rs. 3,37,748. Taking into account the

previous balance and a sum of Rs. 47,690 required to complete the reserve section of the bridge, there was a net available cash balance of Rs. 1,57,210.

There was a falling off in the number of foot-passengers passing both ways of 166,465 as compared with 1875-76, and this was stated to be due to the practice of evading the toll-bar by passing through the railway-station. The Commissioners were requested to consider, in communication with the Railway authorities, the best means of stopping this, which causes a serious loss to the bridge receipts. The bridge was efficiently managed by the Commissioners throughout the year, and proposals were made for diminishing the risk of accident by improved arrangements for passing vessels through.

The trade of Chittagong, which began to decline in 1874-75, showed no signs of improvement in the year under report. There was a falling off both in the number and tonnage of all classes of vessels visiting the port, except in the case of ballam boats and vessels engaged in the trade with Naraingunge. The increase under the latter head was insignificant, while the increase in the number of ballam boats was counter-balanced by a decrease in the aggregate tonnage of vessels of that class.

Statement showing the Number and Tonnage of Vessels visiting the Port of Chittagong in the last two years.

PARTICULARS.	1875-76.		1876-77.	
	No.	Tonnage.	No.	Tonnage.
European vessels direct from Europe ...	8	5,137	5	4,067
Ditto, foreign trade ...	18	7,528	16	6,896.55
Ditto, coasting trade ...	10	4,923	7	2,980.67
Chittagong vessels ...	58	12,287.7	40	9,817.52
Other native vessels ...	4	1,007.7	5	1,391.14
Naraingunge inland trade ...	40	3,511.9	41	3,733.6
Mail steamers ...	73	34,080	68	27,925.68
Trading steamers ...	1	201
Ballam boats ...	1,563	26,069	1,609	23,820.75
Total ...	1,773	94,839.3	1,791	80,652.91

The falling off in the number of European vessels was due to the fact that Chittagong was in the year preceding overstocked with salt, which is the only cargo at present taken there by ships from Europe. Under all other classes the decrease arose from the general stagnation of trade caused by the cyclone of October 1876, which greatly injured the standing crops and prospects of exports, and was followed by an epidemic of cholera, which temporarily paralysed the energies of the people and put a serious check upon commercial activity.

The following statement of the export of grain from Chittagong for the last five years shows that the decline in the trade has been continuous since 1872-73 :—

			Tons.	Rs.
1872-73	103,711	41,14,066
1873-74	71,686	44,30,218
1874-75	45,072	26,43,440
1875-76	26,335	15,13,426
1876-77	18,659	11,85,508

The following statement exhibits the receipts and expenditure of the port for the last two years :—

					Rs.
Receipts	...	{ 1875-76	24,644
		{ 1876-77	19,708
Expenditure		{ 1875-76	63,105
		{ 1876-77	27,627

Although the receipts of 1876-77 were less by Rs. 4,936 than those of the preceding year, the expenditure diminished in a much greater proportion. This decrease mainly arose from the omission of Dockyard charges, and from the unusually small amount of the Public Works charges, which were less than a third of what they were in 1875-76.

It was mentioned in last year's Administration Report that application had been made to the Government of India for a reduced loan of Rs. 30,000 for expenditure on certain works of immediate importance at False Point in Orissa. Before sanction was accorded, the Superintendent of Marine Surveys, after consultation with the local officers, proposed a scheme which was generally concurred in by the Lieutenant-Governor for regulating the expenditure of the loan. After the close of the year the loan was sanctioned by the Government of India, and measures are now in progress for carrying out the suggestions made by Commander Taylor.

The reasons for the appointment of a Health Officer for the port of Calcutta were noticed at some length in last year's Administration Report. Quarantine rules, which are rigorously enforced in the chief ports of Europe, have not been introduced here. Simple inspection by the Health Officer, and the adoption by the masters of vessels of such hygienic measures as he may prescribe, stand in the place of the quarantine regulations, which frequently impose a heavy burden on commerce in European ports. It is believed that the mercantile community of Calcutta fully appreciate the necessity for the appointment of a Health Officer of the port, and understand that in view of the increasing number of ships visiting Calcutta, and the more rapid communication with Europe by the Suez Canal, the only alternative to the present system would be the introduction of regular quarantine.

Besides inspecting the shipping, it is the duty of the Health Officer to exercise a close supervision over the local sanitation of the river and its banks, and to propose such measures as may be necessary to discover the causes and check the progress of any outbreak of disease among the vessels lying in the port. For these various purposes he is provided with an adequate establishment and a steam launch, the cost of which is debited to the Hospital Port Dues' Fund. The fund is in a thoroughly solvent state, and there will be no occasion at present to raise the tonnage dues now levied under sections 59 and 60 of Act XII of 1875.

It was observed last year that the record of the distribution of cholera among the vessels lying in the port had not been extended over a sufficiently long period to form the basis of any trustworthy conclusions.

Cholera among the shipping.

During 1876, 110 Europeans attacked with cholera were admitted into the General, Howrah, and Medical College Hospitals, of whom 53, or 48·20 per cent., died. In 91 cases at the General Hospital, and in 10 at the Howrah Hospital, notes were taken of the part of the river from which they had come; and out of the 101 cases thus observed 55, or 54·46, were traced to vessels lying below Fort Point, showing that although far less than half of the shipping in the port was moored below Fort Point, fully half of the cholera cases of the year occurred in that part of the port. It is hard to resist the conclusion that this was mainly due to the fact that ships moored below Fort Point lie between two sources of sewage discharge,—the fort drain and Tolly's Nullah. The long-pending question of the disposal of the sewage of the fort was considered by a special committee, and it was decided to connect the fort drains with the main municipal sewer, and to discontinue the practice of discharging sewage into the river. This, it is believed, will remove one of the permanent causes of cholera in the port; and the conclusion arrived at by the committee furnished a most satisfactory solution of a difficult and complicated question. The sanitary condition of the south bank of Tolly's Nullah was also attended to.

Besides the 110 cases of cholera noted above, the list of the principal diseases of the year included 285 cases of dysentery, 244 of malarious fever, 29 of scurvy, and 133 of contagious diseases. From inquiries which were made by the Health Officer in the General Hospital, there seemed to be reason to believe that the latter class of diseases are for the most part contracted in Europe, and not in Calcutta.

One of the most important functions of the Health Officer is to board ships on their arrival in port, and to inquire into the causes of all cases of scurvy that are found among the seamen. In the course of these inquiries it was ascertained that the quality of the lime juice supplied to British ships was nearly uniform, although the citric acid, which is its essential element, was sometimes deficient. From several cases of scurvy reported in the current year, there was reason to believe that the lime juice supplied to British ships, even when purchased from recognized warehouses, is frequently very deficient in citric acid and that this deficiency is often the immediate cause of scurvy. The English Acts provide for the lime juice containing a certain proportion of proof spirit, but the proportion of citric acid has never been laid down by law, although it is understood that eminent hygienic authorities consider 30 grains of citric acid to each ounce of lime juice to be the minimum that is required. A further difficulty arises in the case of tinned provisions from the fact that the outside of the tin affords no evidence of the date at which the contents were sealed up. Measures were taken to bring these defects to the notice of the Board of Trade.

An increasing use of filtered municipal water was made by the shipping in the port. Under existing arrangements water is supplied by the Municipal Commissioners to the shipping at a fixed charge of Rs. 8 per 1,000 gallons. When vessels are near enough to the shore to admit of the hose being carried on board the supply is given direct from the hydrants, and

in all other cases the water is taken alongside the ship in iron tanks, placed in large country boats, and is pumped up into the reservoirs on board. In 1876, 949 vessels with crews aggregating 18,980 men used municipal water, as against 247 with crews of 4,940 in the preceding year. The average quantity of water taken per head was shown to have been 359 gallons; but in the case of steamers the water-supply is not regulated entirely by the requirements of the crew, as water is also used for filling boilers on leaving port.

During the year under report 3,166 gallons of lime juice were examined and passed by the Inspector of Antiscorbutics, in conformity with the provisions of the English Merchant Shipping Act of 1867.

The number of gallons passed last year was 3,849, which shows a decrease of 683 gallons in 1876-77. This difference was partly owing to the fact that fewer emigrant vessels were supplied with lime juice in the year under review than in 1875-76, and partly to the fact that the greater number of vessels from Great Britain had on board a stock of the article sufficient for their return voyages. The 3,166 gallons passed during the year were disposed of as follows :—

					Gallons.
To emigrant ships	1,594
To other vessels	791
In hand	781
			Total	...	<u>3,166</u>

IV.—PRODUCTION & DISTRIBUTION.

eteorology of Bengal.

ONE of the more remarkable features in the distribution of pressure in Northern India is the frequency of abnormal variations. It is very probable that these irregularities are very intimately connected with irregularities in the distribution of rainfall. A careful and prolonged study of the connection between the two will doubtless throw much light on the distribution of rainfall, the most important question in an economic point of view with which meteorology has to deal in India.

The pressure over the whole of Bengal during the year was abnormally and persistently low. Chittagong and Darjeeling were the only two stations at which the pressure was above the mean. The average defect of pressure for the year over the province was $\cdot 01$ inch. Patna, Cuttack, and False Point, were characterized by excessively low pressures, the average defect for the year at these stations being $\cdot 03$ inch. During the year the pressure was relatively least in Orissa and Central Behar, whilst it was relatively high, and persistently so, in Cooch Behar and along the north-east corner of the Bay.

The pressure during the first five months, January to May, was uniformly in defect. It amounted to $\cdot 05$ inch in January, $\cdot 03$ inch in February and March, $\cdot 04$ inch in April, and $\cdot 01$ inch in May. During this period Patna was the station of relatively lowest pressure. During the remainder of the year the pressure oscillated about the mean. Thus in June it was $\cdot 02$ inch in excess, in July $\cdot 03$ inch in defect, in August $\cdot 01$ inch in excess, in September $\cdot 02$ inch in excess, and in October $\cdot 06$ inch in excess. During the rainy season the pressure in Orissa was abnormally low, and this division formed an area of persistent low pressure. In November the pressure was again in defect over the whole province, averaging $\cdot 04$ inch in amount, whilst in December it was in excess ($\cdot 03$ inch).

The variations of temperature from the normal temperature were not great. The more marked changes were all intimately connected with the variations of pressure, increasing temperature accompanying diminished temperature, and *vice versa*. Thus during the first five months, when the pressure was in defect, the mean temperature was in excess. The increased temperature was most marked at Cuttack and Burdwan, where it was 2° above

the average, and at Gya, Patna, and Saugor Island. The excess averaged 1° for the whole province.

The temperature was excessive at Patna, Gya, and Hazareebagh during the month of June. It was 3.1° above the average at these stations. Cuttack, False Point, and Saugor Island, formed a second area of high temperature. Over this region the temperature was 1° above the mean.

The mean temperature during the months of July, August, and September varied very slightly from the mean. It was nearly 1° in defect during the month of July for the province, and was normal during August and September. October was the month of greatest variation of pressure and temperature. The latter was 2.2° below the average for the province, whilst the mean pressure was $.06^{\circ}$ in excess. The diminished temperature was most strongly marked in Behar, Chota Nagpore, and Cooch Behar.

The temperature continued to be below the average during the remainder of the year. The area including False Point, Saugor Island, Calcutta, Dacca, and Jessore was relatively the coldest at this period. The temperature was over this area 2° below the mean. The Hazareebagh returns also indicate that the temperature was abnormally low in Chota Nagpore.

The mean temperature of the year varied very slightly from the means of previous years, except at Darjeeling and Jessore, at both of which it was 1° in defect.

January.—No rain fell in the Burdwan, Presidency, Rajshahye, Dacca, and Chittagong Divisions, in the Patna and Gya districts, and in Orissa and Chota Nagpore.

Rainfall.

The rainfall for this month usually averages half an inch over the whole of Bengal. There was slight rainfall in Behar, but it was much less than the average.

February.—The rainfall during February is somewhat greater than in January, averaging nearly an inch for the whole province. The fall during this month in 1876 was much below the average. There was no rain in Behar, Chota Nagpore, Orissa (except at Balasore), the Rajshahye and Cooch Behar Divisions, and the Moorshedabad district.

March.—The average rainfall for Bengal is 1.5 inches, and for Behar .5 inches, and for Orissa and Chota Nagpore one inch in March. The rainfall for this month in 1876 was in excess in the Burdwan, Presidency, Dacca, and Chittagong Divisions, and in Orissa; whilst it was in defect in the Rajshahye Division and in Cooch Behar. In the Presidency Division, where the rainfall was greatest, the excess was 1.5 inches. The rainfall in Behar and Chota Nagpore was very slight, barely averaging one-tenth of an inch.

April.—The average rainfall of this month over Bengal is very nearly four inches, being greatest along the coast and in Eastern Bengal, where it is upwards of six inches, and diminishing westwards to an average of $1\frac{1}{2}$ inches at Midnapore. In Behar the average is half an inch, and in Orissa one inch. The rainfall of this month in 1876 was generally below the average. There was no rain at all in the Gya and Shahabad districts, and very slight showers in the Patna district and

in Chota Nagpore. It was also insignificant in amount in the Cuttack and Pooree districts and in the Burdwan Division. Elsewhere in Bengal the distribution was somewhat irregular. It was in excess in the Jessore and Moorshedabad districts, slightly below the average in the Presidency Division, and considerably in defect in the Dacca and Rajshahye Divisions.

May.—The normal distribution of rainfall in May is very similar to that in April, but the amount is usually much greater. The rainfall ranges from 12 inches in Mymensing to 2·5 inches and 3·6 at Soory and Bankoora in the Burdwan district. The average rainfall for this month is five inches in Bengal, one and a half inches in Behar, and nearly two and a half inches in Orissa. It was considerably in excess in 1876 over the greater part of the province. It was in excess over the whole of Bengal proper, more especially in the Nuddea, Jessore, Moorshedabad, and Mymensing districts, where the rainfall was three inches above the average. The rainfall of Behar for this month was below the average, more especially in the Patna, Gya, and Shahabad districts, which only received a few partial showers.

June.—The average rainfall in Bengal during June is nine inches, and in Behar four inches. In June 1876 it was considerably in excess in the Burdwan Division, Chota Nagpore, and in Cooch Behar. The rainfall was nearly normal in the Presidency and Rajshahye Divisions. It was considerably in defect in Eastern Bengal, in Behar (except Purneah), and in Orissa.

The rains commenced in Bengal on the 5th and 6th of June, the usual date. The first burst of rainfall lasted from the 5th to the 11th, and did not extend as far west as Behar. There was an interval of fine weather until the 16th and 17th, followed by the advent of a second and stronger moisture current, which gave heavy rains to Bengal and partial rain to Behar. A second break ushered in the full burst of the monsoon rains in the beginning of July, from which date until the first week of October the rainfall was fairly distributed and continuous.

July.—The average rainfall over Bengal, Behar, and Orissa, omitting the two districts of Cooch Behar and the coast region of the north-east angle of the Bay, is 12 inches. The variations from the average over the whole area are small, the rainfall in Behar being very slightly less than in Bengal. The rainfall of July 1876 was abundant over the whole of Bengal, Chota Nagpore, and the Balasore district of Orissa. The excess in the Presidency Division averaged 4·7 inches. It was much greater in the Chittagong Division, the excess at Noakholly for the month being 22·95 inches. The rainfall was in defect over the whole of Behar, the Cuttack and Pooree divisions of Orissa, and in Cooch Behar. The northern districts of Behar, Chumparun, Sarun, Durbhunga, and Mozufferpore, and the adjacent districts of Cooch Behar and Julpigoree, suffered most from deficient rainfall. Over this area there was five inches less rainfall than usual during the month.

August.—The rainfall for this month is usually slightly less than during July, the average for the province, omitting the two districts already excepted, being slightly over eleven inches. The rain for this month in 1876 was again abundant, and also gave more than average

rainfall to the districts in which it had been scanty during the previous month. It was slightly below the average in the Burdwan Division. Over the Presidency and Chota Nagpore it was most abundant, and very nearly four inches in excess. Over Behar it was considerably in excess, more especially in the Bhagulpore and Monghyr districts. The excess averaged $2\frac{1}{2}$ inches for the whole of Behar. Cooch Behar again received deficient rainfall. It was irregularly distributed in the Cuttack and Pooree districts, but was below the average at the majority of stations.

September.—The average rainfall for this month is less than the preceding month, and is about nine inches for the province. The diminution is more marked in Central and Western Bengal and Chota Nagpore than elsewhere. In September 1876 the distribution was more irregular than during the preceding months. The rainfall was, however, above the average. The Dacca and Chittagong Divisions had excessive rainfall. Behar, with the exception of the Bhagulpore and Purneah districts, had rainfall above the average. The Presidency and Burdwan Divisions and the Cuttack and Pooree districts had average rainfall. The rainfall in the Balasore district was considerably in excess. The districts along the foot of the hills, including Rajshahye, Cooch Behar, and the north-eastern districts of Behar, continued to experience deficient rainfall. Over this area it was above 4 inches below the average.

October.—The rainfall of this month is generally irregular. The average fall over Bengal is about five inches, and rapidly diminishes westward. Over Behar it seldom exceeds an average of three inches. The rains in 1876 were late in terminating, and consequently heavier rainfall than usual occurred in October. The excess in Bengal did not average more than one inch. Behar, which had received deficient rainfall at the early part of the rainy season, now enjoyed abundant rain, the excess averaging three inches for that province. There was a break in the rains from the 2nd to the 6th, followed by a week's heavy rainfall. The sky then cleared up until the end of the month, when it clouded over during the formation and approach of the cyclone of 31st October and 1st November, on which days heavy rainfall occurred over the whole of Bengal.

November and December.—The rainfall in November and December is always small in amount. It was even below the average in 1876, except in those districts affected by the heavy rainfall on the morning of the 1st November during the advance and dissolution of the Backergunge cyclone from the coast. This excessive rainfall was confined to the Dacca, Chittagong, and Presidency Divisions. There was no rainfall in Behar during November, and none in either Bengal or Behar in December.

The chief event in the meteorology of the year was the formation of two cyclones during the change from the south-west to the north-east monsoon. Cyclones appear, from recent investigations and daily comparison of the meteorology of the Bay of Bengal and Northern India, to be very exaggerated forms of storms which are common during the whole of the south-west monsoon. The action between the sea and land during

the rains is intermittent rather than continuous in its character. Periods of heavy rainfall separated by intervals of comparatively fine weather is the chief characteristic of the rainy season in Bengal. These bursts of heavy rainfall last usually for several days, and, judging from the experience of one year, appear to be accompanied by the advance of areas of barometric depression from the head of the Bay over Bengal in directions varying from north to west. They are to all intents and purposes feeble cyclones generated in the Bay, which advance from it and are gradually dissipated and disintegrated during their passage landwards. The formation of these cyclones is intimately connected with rainfall in the Bay, for the area of heavy rainfall invariably commences, extends, and vanishes with the birth, growth, and dissolution of the cyclonic disturbance. The most favourable combination of conditions for the formation of intense cyclones occurs at the transitional periods which precede and follow the south-west monsoon. The first of these occurs during the months of April and May, the second in the month of October. The common characteristic feature of these two periods is uniformity of pressure over the Bay of Bengal. Both are consequently periods of calms and variable winds in the Bay. The April transitional period is also marked by great differences of temperature between the land and sea area, and by great daily range of temperature in the land area. These produce at this time what may be called local winds. Along and near the sea-coast well marked land and sea breezes occur, whilst in the upper and central Gangetic valley there are strong hot day-winds. The uniformity of pressure and temperature, which is at the April transitional period confined to the area of the Bay of Bengal, is necessarily accompanied by the prevalence of variable winds and calms. The October transitional period is marked by the same uniformity of meteorological conditions (uniform pressure and temperature and slight wind velocity) over the whole of India as well as the Bay of Bengal. Thus uniformity of meteorological conditions over a large sea area is an essential factor in the sum total of the conditions necessary for cyclone generation in the Bay. And cyclone probability and intensity appear to increase with the extent of the area over which uniformity of conditions prevails, and with the degree of approximation to absolute uniformity of meteorological condition. Thus for two cyclones which occur during the April transitional period three occur during the October period; and the cyclones of the October transitional period are, judging by the amount of the barometric depression, usually more severe. The great cyclone of 1737, when the storm-wave is said to have swept away 300,000 human beings in its advance up the Hooghly; the Calcutta cyclone of 1864; the Midnapore cyclone; the Backergunge cyclone,—by far the most striking examples of cyclones in Northern India,—all occurred during the October period.

The conclusion established by the examination of recent cyclones of the Bay of Bengal is that torrential rainfall for several days over an area in which previous to the rainfall there has been a close approximation to uniformity of meteorological conditions is accompanied by the formation of a cyclone, which advances from the centre to the coast in a direction determined most probably by the distribution of the heavy rainfall.

The following is a very brief summary of the more important features of the origin and progress of the Backergunge cyclone. On the 20th and following days there was almost uniform distribution of pressure in the Bay and Northern India. The pressure then increased to the north of the Bay, and was probably high to the south. The south-west monsoon, instead of retreating southward, continued to prevail over the sea region near the entrance to the Bay. The weather was fine and clear over the greater part of the Bay at this time, except in the south, where slight rainfall commenced. The wind directions were north and north-easterly on the west side of the Bay, and westerly to southerly on the south and east limits of the Bay. An area of diminishing pressure began to be formed on the 23rd; constant precipitation of rain on the south-east accompanied its formation and gradually increased in amount. The area of depression extended northwards, and on the 26th and 27th the winds in the neighbourhood of the area began to show a vorticose motion, and were of considerable intensity, if the returns can be accepted as indicating a general cyclonic motion comparable with the wind velocity registered at that station. This area of diminishing pressure extended northwards during the two following days, whilst at the same time its vortex was also advancing slowly in the same direction. With the continuance of the cyclonic conditions the area of diminishing pressure not only expanded, but the amount of the depression at its centre increased; and on the evening of the 29th the gale of cyclonic character, which had set in some time previously and was rapidly increasing in violence, became at length a cyclone of great force. Its vortex was in latitude 14° north and longitude 89° east at noon of the 30th, and was then advancing slowly north at a rate of about seven miles per hour. Its velocity gradually increased, and it also acquired during its progress—very slowly at first—an eastward motion. It crossed the 20th parallel of latitude in longitude $91^{\circ} 45''$, and at this time was being rapidly deflected to the east. It reached the islands at the mouth of the Megna with a velocity of progression of upwards of 20 miles per hour at 3 A.M. on the 1st. The central area of calm was then from 15 to 18 miles in diameter, and was probably elliptically shaped, its greater axis being nearly at right angles to its path. The cyclone at sea extended over a very considerable area, blowing with hurricane force and disabling vessels at a distance of 200 miles from the vortex. In its brief passage on land its dimensions were much more contracted. It advanced to the north-east from Noakholly at 4-30 A.M., but at this time its north-eastern quadrant extended *over* the Tipperah Hills. They consist of a series of wave-like crests or elevations running north and south. These numerous ridges presented a formidable barrier to the rotation of the wind on the north-western quadrant. They quickly broke up the regular cyclonic motion of the wind on this side. The cyclone was completely dissolved by 10 A.M. of the 1st, the only evidence of its existence a few hours after being a slight barometric depression over the Tipperah Hills, Cachar, and Assam. There was a cloudy sky with slight rainfall in the hill districts and in Assam on this and the following day.

A small portion of the Midnapore district was visited by a revolving storm on the 13th April. These revolving storms are not uncommon in Bengal, and appear to have their origin along the lines or areas separating the region over which the sea winds prevail from the region over which the dry land winds which blow down the Gangetic and Assam valleys prevail.

The storm commenced at the village of Choolka. According to the report made by the authorities on the spot, one current of wind seems to have come into collision with another. The revolving storm, produced evidently by opposing and nearly parallel winds, pursued a general south-west direction to the confines of the district with a diameter varying from one quarter of a mile to a mile. In the area over which it passed its violence was very great. It passed over 46 villages, leveling down upwards of 1,000 houses and huts: 86 persons were killed by the fall of these houses, and 52, who were caught in the open, died from the violence of the wind. Upwards of 800 head of cattle suffered a similar fate.

The statements collected from native testimony are too confusing to afford any precise account of the storm. The chief feature was that beyond the narrow area over which the storm prevailed with destructive violence there was no trace of storm or of destruction of any kind. The duration of the storm was very short. At Choolka and the neighbouring villages it lasted only ten minutes. It gradually died away in the Mohurbhunj district, after having advanced over a distance of 35 miles.

Weather, Crops, and Prices.

GENERALLY speaking the rainfall in Bengal during 1876-77 was above the average, and well distributed. Where, as in the Patna, Orissa, and Chota Nagpore Divisions, the rainfall was deficient in the early months of the years, the heavy and well-distributed falls in the later months secured a good outturn. In Chota Nagpore, however, the drought in the beginning of the year had a disastrous effect on tea cultivation in Hazareebagh, otherwise the harvests were on the whole full and plentiful; and where, owing to the late setting in of the rains, the high land crops were below the average, the winter crops yielded an abundant harvest. In Backergunge, Noakholly, and Chittagong the prospects of the crops were exceptionally favourable until the cyclone of the 31st October 1876, which not only devastated the country, but swept away large numbers of the population. The cyclone was followed by a pestilence, which carried off thousands of the survivors and crushed the spirits of those that still remained. But notwithstanding this unprecedented calamity the people were towards the close of the year recovering from the shock, and were looking forward with confidence to a good harvest. With the above exception the year was one of prosperity to the cultivators, and most of the district officers report having observed signs of a marked amelioration in the material condition of the people.

The high prices of food-grains which prevailed during the year, owing to demands in the famine tracts and the high rates of wages of labour, have tended to improve the condition of the lower classes of the people. In most of the districts of the Patna Division, however, and in the districts of Lohardugga, Hazareebagh, and Manbhoom, the condition of the people is one of extreme poverty: the wages of labour are low, and the cultivators are involved in debt.

A brief account is given below of the results of the harvests, of the prices, and of the condition of the people, during the year in the different divisions of the province.

The rainfall of the year, though in most districts below that of 1875-76, was still in excess of the average.

Burdwan Division. Unfortunately its distribution was not altogether seasonable. In Burdwan there was a short fall in April and May, while continued heavy showers in the latter part of the season produced heavy floods on the Bhagirathi and Adjai. In Midnapore also there were two severe inundations—one in Tumlook and the other in Ghattal—which did much damage both to houses and crops. Notwithstanding all drawbacks, however, the outturn of the harvests was in every district favourable; the rice crop being everywhere above the

average, and the cold-weather crops unusually good owing to the late date at which the rains ceased.

To the cultivators generally the year was one of remarkable prosperity. The full crops, attended with high prices owing to scarcity in Madras, enabled them to pay off most of their debts and to satisfy the demands of their landlords. In Burdwan the grain advances made during the famine of 1874, amounting to Rs. 2,35,000, have all been repaid save Rs. 10,000. Even in the tracts which suffered from inundation the ryots made such profits from mulberry as almost made up for any losses on rice.

Throughout all the districts of this Division the rainfall was sufficient and well distributed, and the rice crops were generally above the average, rising in many places to a bumper harvest. Heavy rain in the end of the cold weather did some damage to the rubbee crops here and there, but on the whole the cultivators had a very good year. In the 24-Pergunnahs the rainfall was not equally distributed, but the weather was on the whole highly favourable for agriculture, so that with few exceptions plentiful crops were realized in almost all parts of the district. In Nuddea the rainfall was equally distributed throughout the district. The timely fall of rain proved most beneficial to rice, and generally the outturn was considerably larger than that of recent years. Other crops, however, suffered more or less by the rains in the different parts of the year. In Moorshedabad the rainfall was sufficient and well distributed, and the total yield of all the crops of the year was on the whole far above the average, and tended to improve the material condition of the cultivating classes. In Jessore the rain was plentiful and seasonable, and with the exception of the cyclone of 31st October 1876 the weather throughout the district was most favourable to the growth of the rice crops. Indigo, which is the next most important agricultural product of the district, was considerably injured by the heavy rainfall in June and July, and the yield was very small. In Magoorah sub-division the loss was so heavy that two out of five factories were closed, and generally in all parts of the district the results were very unfavourable.

In spite of the abundant harvests the prices of food were everywhere high owing to the great demand for rice for exportation. In the 24-Pergunnahs and Jessore the prices of labour also showed a rise, owing, in the former case, to the growth of jute and other industries, and in the latter to the development of the district trade. In the 24-Pergunnahs, taking the general average of prices, it may be said that the best rice was sold at different seasons at the rate of 16 to 18 seers for the rupee, and common rice at 20 to 23 seers. The price of agricultural labour varies at different seasons. In the transplanting and reaping seasons the wages of a labourer last year varied from 3 to 4 annas a day, besides a meal or its equivalent in money. At other seasons the highest rate paid was 3½ annas.

The following rates were paid for skilled labour, viz.—

Gharami	4 to 5 annas a day.
Carpenter	5 to 8 "
Mason	5 to 8 "
Blacksmith	6 to 7 "
Potter	5 "

In Nuddea, in the beginning of the year, common rice sold at from 19 seers 4 chittacks to 24 seers per rupee, and wheat from 20 to 23 seers. These rates continued till August, when prices fell somewhat in most places. No further reduction, however, was effected by the results of the harvests; but prices rose and were maintained till the close of the year owing to the large exports of rice to Madras and Bombay, and to an improvement in the export trade of wheat. The price of labour varied in different parts of the district. The usual rate paid for unskilled labour was 2 annas per diem; in Ranaghat, $2\frac{1}{2}$ to 3 annas; and in Kooshteah, 4 annas per diem. The rates for skilled labour were—

Thatchers and masons	$3\frac{1}{2}$ to 4 annas.
Blacksmiths, carpenters, and tailors	6 to 8 „
Palkee-bearers	6 to 8 „
Manjees	4 „

In Moorshedabad common rice sold at 21 seers in the beginning of the year; at 29 seers in October, when it was cheapest, after the harvest; and at 18 seers in December, when it was dearest. Owing to large exportations the prices were higher at the close than at the commencement of the year. The price of wheat varied from 13 to 27 seers per rupee, against 18 to 30 seers in the previous year. The wages of the different classes of labourers in the district are given below:—

		Rs. A.	Rs. A.			Rs. A.	Rs. A.
Day labourers ...	{ Men ...	3	12 to 5 0	Thatchers	5	10
	{ Women ...	2	12 „ 3 10	Brick-layers and masons	3	12 to 7 8
	{ Children ...	1	0 „ 2 0	Domestic servants	4	0 „ 5 0
Silk-spinners ...	{ Men ...	4	0 „ 5 0	Boatmen	5	0 „ 6 0
	{ Women ...	3	0 „ 3 0	Tailors	7	8 „ 15 0
	{ Boys ...	2	0 „ 3 0	Blacksmiths	15	0
Carpenters	5	10 „ 15 0	Goldsmiths	6	0 „ 9 0

In Jessore there was a general rise throughout the year in the price of food-grains. At the close of the previous year coarse rice was sold at Re. 1-8, and the best sort at Rs. 2 per maund. In the early part of the year the price began to rise, until July, when coarse rice was sold at Rs. 2 and the best rice at Rs. 2-8. In August, when the *aus* crop was harvested, prices began to fall; but the depression was temporary, and prices rose again in consequence of the partial injury which was caused to the *aman* rice by the cyclone of October last. A further rise in prices occurred owing to the famine at Madras and Bombay, and at the close of the year common rice was selling at Rs. 2-8 and the best sort at Rs. 3 per maund. Pulses generally, and molasses and sugar, also fetched higher prices than during the previous year. The higher price obtained for the date sugar is said to have been due to the failure of beet sugar in France and of the maple sugar in parts of America. With the exception of petty fluctuations, the prices of labour were much the same as in the previous year. Simultaneously, however, with the rise in the price of the food-grains the price of labour was also increased. Carpenters and blacksmiths now demand from Rs. 10 to Rs. 15 a month, thatchers from Rs. 7-8 to Rs. 10, while the services of an unskilled coolie cannot be procured for less than Rs. 6 a month.

The season was on the whole favourable, and in every district save Rungpore the rice harvest was a full one. In parts of Rungpore insufficient rain in July, and an unduly heavy fall in October, did some damage to the amun crop. The outturn of jute was above the average in every district save Pubna.

The rainfall registered at the head-quarters of each district in the division during the year compares thus with the average fall:—

		Inches.	Average of years.	
			Inches.	Years.
Darjeeling	...	128.11	112.47	14 to 17
Julpigoree	...	113.95	125.66	7 „ 8

Rajshahye	...	76.38	60.33	14 „ 17
Pubna	...	74.57	64	9 „ 10

The reports of the district officers confirm the fact already noticed, that a marked amelioration in the material condition of the people is to be observed in most of the districts of Bengal. The effects of the famine have in this division entirely passed away. Good harvests and high prices have enabled the ryots to pay up their arrears of rents and of famine advances, and the only fear now is that the improved condition of the peasantry, and their consequent independence, may make them act unfairly towards their landlords.

Throughout this division the demand is for labour, and not for land: hence there is no direct emigration to other parts. The cultivating classes are substantial and well-to-do, and great bodies of hired labourers annually come in from Behar and Nepal seeking work, which they readily obtain. Neither local labourers nor skilled artisans are to be found save at very high rates; and yet there are no symptoms of any immigration of permanent settlers, save into some tracts near Darjeeling, where the Nepalese are forming here and there small colonies of garden coolies. Some Nepalese, too, seem to be settling down as permanent cultivators in the hills.

Prices were high in the early part of the year, but fell owing to the abundant harvest, rising again as the extent of the demand for the famine districts made itself felt.

The following statement shows the rainfall at the sudder station of each district in this division for the year under report and for the two previous years:—

DISTRICT.										1874-75.	1875-76.	1876-77.
										Inches.	Inches.	Inches.
Dacca	48.68	66.12	76.31
Furzedpore	60.86	65.52	73.37
Baekergunge	64.29	65.15	87.17
Mymensing	71.24	73.60	94.89
Tipperah	74.67	87.95	108.61

It will be seen that in every district save Mymensing the rainfall was above the average, and in every instance it was far above the fall of either of the two preceding years. Rain fell throughout the division in every month of the year except in December. It was indeed a season of quite exceptional rain and frequently recurring storms. The district of Backergunge fared worst, for on the night of the 31st October there broke over it the cyclone with its attendant "waves," which destroyed in Dukhin Shabazpore and Patooakhally no fewer than 74,000 human beings on shore, besides doing enormous damage to cattle and other property, and drowning a floating population the number of which is even now unknown. (In Tipperah and Furreedpore the same storm inflicted serious injury on the dwellings, cattle, and betel-trees, though there was no great loss of human life.) This was followed by a heavy gale of wind on the night of the 23rd November, which lasted throughout the next day, doing much damage to the crops, particularly in the tract already devastated by the "waves." Again, on the 4th of February, another furious storm burst over this district, destroying many boats on the larger rivers. In Tipperah the Goomtee rose in flood, and in July and August topped its embankments (a thing unknown before within the memory of man), threatening the district with a vast calamity, which was only averted by unceasing labour night and day until the waters fell. On the 8th of February this district also was visited by a furious storm, in which many cattle perished in the open pastures of Brahmunbariah. In Mymensing storms were frequent in Kishoregunge, and hail did damage to the millet crops of Attia.

Notwithstanding, however, all these calamities, the harvests of the division were finer than they have been for years. In Dacca the ryots had an exceptionally full crop. In Furreedpore the rice was unusually fine, and the outturn of sugarcane and date-trees excellent. In Backergunge the loss caused by the cyclone was serious in Dukhin Shabazpore and Patooakhally, but the Sudder and Perozapore sub-divisions had an average crop. In Mymensing the rice crop was full, but jute was rather below the average. In Tipperah, notwithstanding the storm, the *amun* was an average crop, while the *aus* and *boro* were decidedly good. The damage done to the betelnut-trees was perhaps the loss that most affected the pockets of the ryots.

Generally there can be no doubt that the material condition of the agricultural portion of the population is one of great and increasing prosperity, and, as a consequence, of rapidly advancing independence. The growth of the jute cultivation is assigned as the chief cause of this. The Magistrate of Dacca states that the amount of jute grown in that district alone and sold at Naraingunge put a sum into the ryots' hands enough to pay the whole rental of the district and leave a surplus of over 8 to 13 lakhs. A similar state of things is found in Furreedpore, Mymensing, and Tipperah. "The style of living of the peasantry has quite changed. They are well-housed, well-fed, and well-clothed; their women and children wear ornaments; their utensils are of metal instead of, as formerly, earthenware; they sleep on platforms instead of mats, and are covered with quilts well stuffed with cotton, in place of the rags of cloth that in former years sufficed for this purpose." It is said that the professional and petty trading classes have not shared in

this prosperity, and have felt the higher prices of necessaries. They will probably, however, be able in time to raise the rate of their own remuneration.

Up to the 31st October last the most prosperous ryots in all Bengal were those of Backergunge, and amongst them the ryots of Dukhin Shabazpore were better off than all their brethren. In one night they lost their cattle, most of their crops, and a large section of their population. After which came a pestilence sweeping off thousands of the survivors and crushing the spirits of those who still remained. Yet notwithstanding all these unprecedented misfortunes the country is already recovering from the shock. Houses have been rebuilt, cattle imported, and it is hoped that even this year there will be hardly any land left fallow from the want of men to cultivate it. The suspension of the Government demand, the loans advanced, and the relief afforded by private subscriptions to the absolutely destitute, have been sufficient to give the people the start they needed. In the rest of the district the ryots seem hardly at all to have felt the damage done.

Prices were lower during the year than they had been for some years past, though towards the close the demand for the famine districts was causing a rapid rise. Labour, both skilled and unskilled, is dear and scarce throughout these Eastern districts owing to the generally prosperous condition of the agricultural classes; and but for the annual influx of labourers from Behar things would be still worse.

Up to the very end of October the prospects of the crops in this division were exceptionally favourable, the rainfall having been both sufficient and well distributed, especially in Noakholly; but on the night of the 31st October the cyclone burst upon the coast near Chittagong and travelled along the shore line, desolating on the main land a vast tract of country from Chittagong to Burrisal, and sweeping the islands of Dukhin Shabazpore, Hattea, and Sundeep with successive storm-waves. The number of deaths caused by this calamity in Chittagong and Noakholly was 48,324. It was followed by an outbreak of cholera of the most virulent kind, which, in spite of all the efforts made by Government for the relief of the people, carried off 49,061 persons in Noakholly and 14,788 in Chittagong. The gross mortality traceable to the cyclone and consequent epidemic in all the districts of the Chittagong and Dacca Divisions may, according to the most recent and accurate accounts, be stated as—

Deaths caused directly by the cyclone	122,238
Ditto by cholera	105,386
Total	<u>227,624</u>

The parts of the division most injured were unfortunately those which in ordinary seasons produce the largest crops; and the effect on the food-supply was disastrous, especially in Chittagong, which produces generally little more than suffices for its own wants, and which was already suffering from a bad season in the year preceding. Notwithstanding all, however, such has been the general

prosperity of the people of late years that even in Chittagong they have been able to hold out without Government interference. Prices have been no doubt remarkably high, rising at times in isolated tracts to famine rates; but even the lower orders have not been driven to extremity, and things are fast returning to their normal condition. The cultivators were, at the date of the report, looking forward with confidence to a good harvest, which, however, the recent very heavy rainfall has somewhat spoilt.

One very good test of the condition of the lower classes lies in the rate of wages; and both in Chittagong and Noakholly these are said to be very high. In Chittagong this is, no doubt, due to the fact that nearly every one has some interest in land, while in the south of that district a man can earn from 8 to 12 annas a day by crossing over to Arracan and working at transplanting or reaping rice.

The year was not, on the whole, an unfavourable one in this division as regards weather and crops. In most districts the *bhadoo* harvest was fair, although the rains were very late in setting in, and there was such an abundant fall in August, September, and October as to secure to the division a fair crop of winter rice and the best rubbee harvest it has known for some time. It is established by the experience of the year that, however short may be the rains of June and July, heavy and well distributed falls in August and September will secure in Behar a good rice crop. The fact that proper distribution is of far greater importance than the gross quantity of rainfall has also been noticed elsewhere.

The material condition of the mass of the population in this division is extremely low. The wages of the labouring class are barely sufficient to furnish them with the means of supporting life. They live from hand to mouth, are always under-fed, and the slightest abnormal pressure brings them to the verge of acute distress. In Tirhoot the money wages of field-labourers have remained practically unchanged for the last sixty years. Although the prices of food-grains have risen, and are still apparently rising, one anna to one anna and a half per diem is still the usual wage of an able-bodied labourer. The apparent hardship of this is, however, somewhat mitigated by the fact that it is the custom of the district to pay the labourers in kind rather than in cash, and that even when cash is paid the labourer usually gets also his midday meal. At harvest time the labourers are remunerated by a percentage of the crop reaped: one sheaf for every sixteen is said to be a usual proportion. Under this arrangement the labourer is worst off in a bad year; and the bad years have in North Behar been very frequent of late.

The cultivating classes are generally involved in debt. Even in times of plenty, after paying the rent and the numerous cesses exacted by the landlords, very little is left to them for their support. When such is the condition of the people in ordinary years, the failure of a single crop is sure to cause distress. This is felt most in the tracts where rice is the principal crop, as that is most susceptible to injury from drought. In the year of report relief measures on a limited scale had to be organized on this account in parts of Mudhoobunnee, which is almost entirely a rice-producing tract, and which suffered from a failure of the

autumn rains of 1875, while the other sub-divisions of Durbhunga were in comparatively good ease.

The remedy for the state of things above described is by no means easy to discover or apply. For the labouring class emigration has been repeatedly suggested and advocated; but the number of emigrants from these districts seems yearly to decrease, falling from 7,159 in 1874-75 to 4,482 in 1876-77. Not a single emigrant was last year recruited from Sarun, which is the most densely populated tract in the whole division. The district officers believe that it is only gradually, with the spread of education and removal of ignorant prejudices, that any general tendency to emigrate is likely to arise. There are, however, already signs that the opening of the Tirhoot Railway has done something to stimulate temporary emigration for the purpose of finding work; and it might be useful if the Colonial Governments would send to Behar as recruiting agents their most successful Behari settlers.

As regards the cultivators, the great desiderata are an easy mode of proving occupancy rights and the general abolition of the *danabundi* and *thikadari* systems. During the last few years attention has been directed to the prevalence of illegal distraint throughout the districts of North Behar, and active measures have been taken to stop this. In the great Wards' estates especially a sounder system of administration has been introduced, which cannot fail in the end to have an influence upon the management of the private estates around them.

The prices of food during the year were on the whole favourable, except in those parts of the Durbhunga district that were affected by the failure of the winter crops of 1875-76. Common rice ranged from 16½ seers per rupee in Mozufferpore to 22 seers in Gya. Prices were kept comparatively low in Tirhoot by extensive importation from Nepal, the North-Western Provinces, and other parts. In this the State Railway rendered conspicuous service.

The rainfall of the year was favourable and sufficient. Not only were all field crops unusually good, but the Aghan rice especially yielded a heavy outturn. The mango crop was abnormally large, and *mahua*, on which the poorer classes much rely in the southern parts of the division, was also plentiful. There was a marked difference between the rainfall of the districts north and south of the Ganges, as shown below:—

					Inches.
Monghyr	50.47
Bhagulpore	54.19
Sonthal Pergunnahs	59.17
Purneah	70.40
Maldah	67.06

This is, it is believed, a phenomenon of frequent recurrence.

Fine crops at home and high prices abroad made the year a prosperous one for the cultivators. The Commissioner writes:—"The people are advancing, though slowly, in intelligence and wealth; they look happy and contented. Marriages are numerous, and fairs and religious festivals well attended. Coolies cannot be as easily obtained as formerly, and the prices of labour are supposed to be going up." In Purneah the trade in jute and oil-seeds has added largely to the ryots'

means, while Maldah has specially benefited, though it is to be feared only temporarily, by the higher prices of silk cocoons.

Food was generally cheap throughout the year, rice ranging from an average of over 19 seers per rupee in Bhagulpore to 24 seers in Purneah. There was, however, a rise in the price of wheat owing to the large demand for Europe, and to the fact that the crop suffered to some extent from excessive moisture. Prices would have been higher everywhere in this division had not the want of rolling-stock on the East Indian Railway prevented free exportation of rice and other cereals.

The past agricultural season appears to have been a fairly good

Orissa Division.

one for Orissa generally, and an exceptionally fortunate one for the district of Balasore. In all districts the rains set in late. The early months of 1876 had been indeed exceptionally dry, and some apprehension was felt as to the prospects of the year in many parts of the division; but eventually timely showers in Cuttack and Pooree, and heavy rain in Balasore, removed all fears. The following table shows the actual rainfall of 1876-77 as compared with the average annual and monthly supply. The figures for Cuttack and Pooree, taken in connection with the actual outturn of the harvests, prove that timely distribution of rainfall is more important than its absolute quantity.

MONTHS.				CUTTACK.		POOREE.		BALASORE	
				Rainfall of 1876-77.	Average rainfall.	Rainfall of 1876-77.	Average rainfall.	Rainfall of 1876-77.	Average rainfall.
April	1876	·15	1·66	1·58	3·52	2·94
May	"	3·34	1·87	2·08	2·27	6·32	4·39
June	"	5·60	9·89	2·45	8·85	8·40	12·09
July	"	9·80	11·21	6·83	9·25	20·77	9·46
August	"	3·68	10·54	7·30	11·93	16·29	12·03
September	"	9·83	9·01	9·61	9·42	15·95	13·76
October	"	4·89	6·31	6·64	7·82	10·32	7·61
November	"	1·07	·66	·05	0·89
December	"	0·61	·74	0·11
January	1877	·61	0·45	·04	0·09	1·46	1·01
February	"	1·23	0·61	3·13	1·30	1·85	1·22
March	"	1·35	1·02	·68	0·66	·84	1·79
Total				40·46	54·25	38·76	55·55	82·77	67·30

Owing to the heavy rain in Balasore after July the rivers rose to overflowing, and repeated inundations occurred; but none were sufficiently violent or protracted to cause material damage to the crops. On the 9th October 1876 again a violent gale, an offshoot of the Vizagapatam and Bimlipatam cyclone, swept over the district; but the scanty rainfall of June had made the crop late, and the rice was not in flower at the time of the gale. Thus, notwithstanding these visitations, Balasore had a harvest unequalled within the memory of the present generation.

In Cuttack and Pooree, in spite of the marked deficiency of the, rainfall, the general outturn is stated to have been a fair average, except in an area of about 60 square miles around the Chilka Lake, where at one time there were apprehensions of distress and relief works were actually opened. They failed, however, to attract labourers

except in the case of some small village works in which the people took a personal interest, and the crops of the surrounding country fully made up for the local failure.

The exceptional demand for rice from the famine districts of

Prices of food and labour.

Madras caused a continuous rise of price in all the three districts of Orissa throughout the year. In the month of April 1876 rice was selling in Cuttack at 29·8 seers to the rupee, but in March 1877 it had risen to 18·6, the average price of the year being 22·8, or 4½ seers higher than the average of the division calculated for the last sixteen years. In Pooree the April price of 27·9 seers had risen by the following March to 17·1; the average of the year was 21·15, or 5·25 more than the divisional average. In Balasore rice went up from 32 seers to the rupee in August 1876 to 20 seers in February 1877; but according to the district return it fell again in March to 30 seers, or very little above the point at which it started. It will be observed that the price rose most rapidly, and to its greatest height, in Cuttack and Pooree. Both are purely town areas, producing nothing locally but drawing their supplies from the country round. These supplies were sensibly curtailed by the demand from Madras, which attracted rice to the sea-coast and thus raised the prices in the towns. Pooree was also a port of shipment, and the popular discontent at the high prices there was aggravated by the sight of the grain stored for export on the beach, and by the operations of the wholesale merchants, who established a cordon round the town and bought up all rice as it was being carted in. The result was that the supply, even at the enhanced prices, was somewhat scanty, and the people took advantage of the absence of the European officers at the Cuttack Durbar on the 1st January 1877 to plunder grain to the value of nearly half a lakh of rupees. The riot was suppressed after two days, and more than half of the rice recovered. The case of Balasore is different: it is not a regular town like Cuttack and Pooree, but a group of straggling villages, where cultivation alternates with bazars and most people grow their own rice. Moreover the exports from Chandbally are drawn from the interior of the district, and do not affect the supply of Balasore town. In Jajpore and Kendraparah, which are mere villages, the average price of the year was 35 seers, while in Bhuddruck the difficulty of communication with Chandbally kept the average as low as 41·10. Khoordah shows an average of 25·1, but there is some doubt whether a regular rate can be arrived at, as the tract is purely agricultural, and there are no markets large enough to afford a trustworthy index of price.

Doubtless the enhanced cost of their chief article of food was a real hardship to those dwellers in towns who have fixed incomes and do not participate in the increased profits which accrue to the agricultural population; but a little providence in storing when grain is cheap would, and usually does, do much to mitigate this. The exceptionally high rates now ruling will fall with the cessation of the Madras demand; but there is reason to believe that the extension of the trade of Orissa which has taken place in the past year will produce permanent effects in a sensible increase of the normal price of rice throughout the province, and add greatly to its wealth.

The wages of unskilled labourers have risen, especially at the places of export; but skilled labour is not more in demand than hitherto within the province itself. Large numbers, however, of Ooriya artisans find employment in the factories of Calcutta.

In every district except Singbhoom agricultural operations were delayed by the scanty rainfall of the early months of 1876, and consequently the outturn of the high land rice and of the autumn crops was hardly so good as usual. In Lohardugga the autumn crop suffered severely from excessive rain just after the sowings, and the spring crops were damaged by heavy storms in February 1877, which also reduced the yield of mango and *mahua* throughout the division. On the whole, however, these losses appear to have been compensated by the abundant outturn of the winter rice, the staple crop of Chota Nagpore; and the general results of the season confirm the conclusion that in this undulating country, when the rainfall happens to be somewhat deficient, the enhanced yield of the low-lying lands, which are often drowned out by an excessive fall, will as a rule make up for a partial failure of the high land crops.

Although the outturn of food-grains in the past year was fully up to the average, the drought at the close of 1875-76 and the beginning of 1876-77 is stated to have had a peculiarly disastrous effect upon tea cultivation in Hazareebagh. In the preceding year the 720 acres under cultivation yielded 94,889lb, or an average of 130·93lb per acre; while in 1876-77 the outturn of 718 acres was only 47,717lb, or 66·46lb per acre. As the conditions of tea-growing in Hazareebagh are practically identical with those which prevail in Lohardugga, and as the liability to droughts in the early months of the year is common to both districts, the results of the past season are not without interest in their bearing on the prospects of tea cultivation in Chota Nagpore as a commercial undertaking.

It is perhaps premature as yet to forecast the future of tea enterprise as carried on upon this plateau, but there are certain facts in connection with it which intending planters would do well to bear in mind. If we compare the temperature, humidity, and rainfall of Goalparah in Assam and Silohar in Cachar (as given in the Meteorological Report for Bengal for 1875) with those of Hazareebagh, the only district of the Chota Nagpore Division in which accurate observations have been recorded for a sufficiently long period, we find that the plateau is unfavourably situated in respect of each of these important points, while it has, on the other hand, advantages of another kind. In the first place, as regards temperature, while tea requires an equable warm climate throughout the year, the temperature of the plateau is liable to sudden changes of heat and cold, and displayed an absolute range in 1875 of 63·5° as compared with 49° and 52·2°, the extreme absolute range of Goalparah and Silohar respectively. Similarly, while the mean yearly temperature of Hazareebagh is 74·4°, that of Goalparah 74·8°, and of Silohar 75·9°, the mean range of temperature at Hazareebagh is 20·1°, as against 16·4° at Goalparah and 17·7° at Silohar. Secondly, on comparing the mean humidity of the three districts, it appears that in Hazareebagh the mean humidity is

represented by 51, in Goalparah by 71, and in Silohar by 73. Lastly, as regards rainfall, Assam and Cachar, in common with the eastern districts of the delta, have a fairly copious rainfall during the earlier months; but Hazareebagh, like the rest of Western Bengal, has from January to May a peculiarly slight fall. The average rainfall of Hazareebagh is 51·53, that of Goalparah is 94·92, and that of Silohar 118. But in the first five months of the year the average rainfall in Hazareebagh is only 3·64, while in those months Goalparah got 22·10 and Silohar 36·49 inches. During those five months of the year 1875 rain fell in Hazareebagh on 23 days only, but in Goalparah it fell on 46 days, and in Silohar on 67. Rain fell in Hazareebagh on 115 days of the year, as against 128 days in Goalparah and 165 days in Silohar. The injurious effect on the tea plant of the deficiency of rain during the first five months of the year is aggravated by the prevalence during April and May of hot westerly and north-westerly winds, which prevent the mature plants from “flushing” or throwing out fresh leaves, and oblige the planter to go to some expense in erecting shelter for his immature plants. Again, although it is true that in some parts of Hazareebagh soils can be found which are not appreciably inferior to those of Assam, yet, speaking generally, the soils of this district are shallower, drier, less nourishing, and more easily exhausted, than the tea soils of the eastern plantations; while irrigation, which might in some measure counter-balance the disadvantages which have been enumerated, can, save in exceptional situations, be applied effectually to a garden only at a high cost; and in the hot season, unless applied very thoroughly, it is actually injurious to the plant.

As a set-off against these drawbacks, Hazareebagh is free from the “labour difficulty,” which has so seriously affected tea cultivation in Assam. The supply of labour is sufficient and cheap, and the only complaint which the planters have made is that the coolies are apt occasionally to leave the tea gardens in order to work on their own land.

Except in the Kolhan of Singbhoom, where the prosperity and comfort of the Ho tribe of Kols is well ascertained, the normal condition of the Chota Nagpore cultivators is one of extreme poverty. The soil, both of the table-land itself and of the low-lying valleys, is fairly productive, and the agriculture of the country is well adapted to its circumstances, especially in respect of the rotation of crops; but the produce of the soil cannot readily find a fair market, and the cultivators are at the mercy of village mahajuns and itinerant grain-dealers. There will not probably be any material improvement until the country is thoroughly opened out either by roads or light railways, or until the population has increased by immigration. At present large tracts of fertile land and much wealth of minerals are lying undeveloped. The time will probably come when the export grain trade of Hazareebagh will be of sufficient importance to warrant the construction of a light railway to connect it with the East Indian Railway.

Both wages and prices continue exceptionally low. The average price of rice during the year ranged from 21½ seers in Hazareebagh to 39½ in Chyebassa and 46½ in Seraikela of Singbhoom. In Manbhoom the average was 26½, and 29 seers was the average price at Ranchi.

It is probable that the recorded rates are to some extent affected by the practice of selling rice at the customary rate of one pice per *paila* or local seer, the size of the *paila* being reduced as the market price rises. But even allowing for this element of confusion, it is clear that throughout Chota Nagpore prices run peculiarly low, and that owing to the defective communications the cultivators have not shared in the agricultural profits of their neighbours in Orissa. Labourers' wages are also proportionally small; but here again the question is complicated, so far as money rates are concerned, by the almost universal system of hiring *dhangur* labourers by the year and paying them the bulk of their wages in kind, as well as by the prevalence of *begari* labour in Lohardugga and by the survival of the *kamioti* system of serfdom in parts of Hazareebagh. As these local institutions die out wages will undoubtedly rise; and some signs of such a movement are already to be traced.

Statement showing the Average Monthly Retail Prices of Food in Selected Districts of Bengal from April 1876 to March 1877.

Agriculture and Horticulture.

THE progress of the Howrah Botanical garden during the year has been on the whole satisfactory. The growth of the out-door collection was favoured by a comparatively mild hot, and by an unusually showery cold season, while little damage was done by storms of wind. The success of the plants in the large conservatory built in 1874, in the recently instituted succulent plant-house, and of the groups and avenues planted out during the years 1874 and 1875, is especially noteworthy. The improvements in the laying out of the garden, which were begun in 1874, have, as far as hands would admit, been continued during the year. These have now so far advanced that the condition of the part of the garden lying nearest to Howrah leaves little to be desired. Much, however, still remains to be done in the palmetum; while the eastern part of the grounds, more especially in the vicinity of the great banyan-tree, is still very unsightly.

The two plant-houses, which were in a dilapidated condition and useless, have been pulled down, and instead of erecting any buildings on their sites (which were but ill adapted for buildings), a single new plant-house, on the model of that built in 1874, has been erected at another spot.

Various other improvements have been made in the disposition and landscape of the grounds, which need not here be particularly described.

The interchanging of living plants and seeds has gone on actively during the year. The total number of seed packets distributed amounts to 7,053, while, on the other hand, 3,270 packets have been received. Of living plants 24,027 have been issued and 12,246 have been received. To the undernoted gentlemen the garden is specially beholden for donations of plants and seeds:—His Highness Prince Rama Varma, of Travancore; Dr. Hooker, C.B., F.R.S., of the Royal Garden, Kew; Dr. Thwaites, F.R.S., Ceylon; Messrs. Haage and Schmidt, Erfurt; Messrs. Gilbert and Hardinge, Rangoon; Sir William Macarthur, Sydney; Mr. Franklin, Pomoong; Major Mant, R.E.; and Dr. Regel, St. Petersburg. The garden is also highly indebted to Messrs. Apcar and Company, of Calcutta, as well as to the agents for the Peninsular and Oriental and British India Steam Navigation Companies, for the extremely liberal manner in which they have allowed boxes of plants for the garden to be conveyed free of all charge.

The additions to the herbarium during the year consist of a collection (amounting to about 300 species) received from Baron Von Müller,

Melbourne; of 1,724 species from Gay's Herbarium received from Dr. Hooker, Kew; of 270 species of Chinese plants from Dr. Hance, H. M.'s Consul at Hankow; and of small collections from Mr. Nix, Minnesota, United States, and from Mr. A. J. Green, New Zealand. Dr. John Anderson, of the Imperial Museum, also made over to the herbarium a number of plants acquired during the life-time of his late brother, formerly Superintendent of this garden. These have all been incorporated in the general collection. Besides these there are the collections made last year in the Chittagong Hill Tracts, and during the early part of the present year near Moulmein; also a number of plants collected in Sikkim. The latter have not as yet been incorporated in the collection.

In the year 1875 the Botanical Gardens were transferred by the Government of India to the Provincial Government with an assignment of Rs. 52,000 per annum. The following statement will show the receipts and charges for the gardens during the years 1875-76 and 1876-77 :—

	Rs.	A.	P.		Rs.	A.	P.
Receipts, 1875-76 ...	1,193	9	3	Expenditure, 1875-76 ...	62,173	0	7
Ditto, 1876-77 ...	2,218	7	6	Ditto, 1876-77 ...	63,745	3	2

The question of establishing branch gardens in the Himalayas and at their base in connection with the Botanical Garden at Howrah was under the consideration of Government. It was suggested by Dr. Hooker that supplementary gardens should be opened in a climate where tropical fruits of all kinds might be introduced which cannot be grown in Calcutta, the Royal Botanical Garden being confined to the purposes of botanical instruction, and serving as a sort of harbour for the reception and distribution of plants on their way to and from the hill gardens and foreign countries. The soil, cultivation, and climate of Garden Reach, are admittedly bad, and much money has been spent in the attempt to make it a representative establishment in India of the tropical vegetation of other parts of the globe. Dr. Hooker was strongly in favour of abandoning it and forming a much smaller one near Calcutta, accessible to the metropolitan public, and to be devoted to a systematic cultivation and arrangement of such tropical plants, &c., as will grow in the Calcutta climate for the purposes of botanical instruction, with sufficient paths, drives, and ornamental trees as would form an agreeable recreative promenade for the residents of the town. The other purposes of the Botanical Gardens would then be met by a good tropical garden at the foot of the Sikkim Hills.

The prime object of a botanical garden is (1) the collection in one place, for the facility of study, of living specimens of all the plants indigenous in the country where the garden is located, and, as far as may be possible, of such plants of other countries as are botanically interesting or have economic or horticultural value; and (2) the illustration of other plants which may not be attainable alive

by dried specimens scientifically named and classified. The latter collection is called a herbarium. A second, and scarcely less important, object is the distribution to similar institutions, to colleges, schools, and to private persons, of living plants, of seeds, and of herbarium specimens.

When the Calcutta garden was first established, in the year 1786, it was possible to cultivate in it nearly all the plants indigenous to the British India of that day. Subsequent accessions of territory, much of it possessing a climate totally different from that of Lower Bengal, have not been followed by corresponding facilities for collecting their indigenous plants in a botanical garden; for it is a natural impossibility to grow in Calcutta, under any conditions whatever, the plants of the higher parts of the Himalayas, while those of the more truly tropical British possessions in India (such as Lower Burmah) can be grown there with very imperfect success indeed. The absence in India of any facilities for the distribution of plants and seeds of the more temperate parts of India has long been a matter of notoriety in scientific circles in Europe. It is to remedy this that it was proposed by Dr. Hooker to establish branch botanical gardens in the Himalayas in connection with the central institution at Calcutta.

It was thought that Mungpo, the lowest part of the Government cinchona plantation, might be utilised for this end; and the question was referred to Dr. King for report. In reply he pointed out that there were objections to this site of a serious kind. The vegetation of the Himalayas may for horticultural purposes be roughly divided into three zones. The first zone is that extending from the base of the hills to an elevation of about 2,500 or 3,000 feet. This consists of plants which, as a rule, can be got to succeed under cultivation on the plains below. The second zone is that stretching from 3,000 to 7,000 feet. Here are found plants which cannot, as a rule, be got to grow on the plains under any kind of culture. The third zone is that extending from 7,000 feet to the perpetual snow line. In this zone are found plants which cannot be grown in either of the zones below.

In the Sikkim Himalayas a garden to illustrate the lower of these zones would be best situated about the level of Pankabari; and if a valley dipping as low as the plains could be secured, the bottom of it would probably be found to have a climate rather more suitable for truly tropical plants than that of Calcutta, while the soil and drainage would be unquestionably better than those of the Gangetic delta. Any part of the Mungpo plantation of the elevation of Rishap would have a climate much the same as Pankabari, and in it a suitable site for a subtropical botanical garden might easily be found, in which could be collected most of the plants of the lower hills, and whence after a time supplies of their seeds could be issued. But Mungpo is at the extremity of the district, and will probably always remain an out-of-the-way and rather inaccessible locality. At present it stands in a kind of *cul-de-sac*, for there is during a third part of the year no possible exit from it eastwards; and even although a good road were one day made along the Teesta Valley, the distance by it to the

railway terminus would be over twenty-five miles through a feverish valley, and, on the other hand, the connecting road to Darjeeling would not probably be run past Mungpo. This argument against Mungpo (of inaccessibility) is strengthened if it is desired to have a garden whence useful plants, such as plantations of good sorts of cardamoms, &c., might be distributed throughout the district. Accessibility to the public being on every ground of great importance, the best possible site for such a garden would be somewhere on the direct road from the plains to Darjeeling, and, if possible, near some place where travellers are in the habit of halting. On the other hand, there was something to be said in favour of Mungpo. A trained establishment belonging to the cinchona plantation is in existence there now, the land belongs to Government, and a garden could be established at less cost there than near the cart road.

But the establishment of a branch botanical garden in the sub-tropical zone would supply only one, and that the least pressing, of the proposed branch gardens. For the second zone a garden about the height of Rungaroon or Lebong would be suitable, and for the third zone there should be an Alpine garden on Tongloo. This latter garden would require attention for only about half the year; during the other half the plants would be at perfect rest. In such a garden there might be brought together, if labour be available, a most interesting and large collection of the plants of the higher levels. The seeds and specimens that could be issued from this garden would be very highly prized in Europe; and a botanical garden at an elevation of eleven or twelve thousand feet would be a decided novelty. Branch gardens in the Sikkim Himalayas have only been noticed here; but viewed scientifically a branch garden on the Khasi Hills (in Assam) would be of equal, if not of greater importance, the Khasi Hill flora being one of the very richest in the world, and not only rich, but peculiarly interesting in type. Branch gardens in the drier parts of the Himalayas, such as Simla or Murree, would be equally valuable; and there being public gardens already in existence at these stations, little cost would probably be involved in giving them a scientific aspect.

A commencement in the direction of establishing these branch botanical gardens has been made in the formation of the Rungaroon gardens, but for the present considerations of expense make it impossible to extend the operations of Government in this direction.

The formation of a Botanical Garden at Rungaroon, in the Darjeeling district, was noticed in the Administration Report for 1874-75.

The entire estate was surveyed, and it was found that the area of the land contained within the boundaries fixed for the Botanical Garden is 75 acres 1 rood and 35 poles, of which rather more than 26 acres is under forest.

The buildings and roads have been repaired, the roof and floor of the lower bungalow have been renewed, and work on the upper bungalow has been commenced.

It is hoped in a short time to begin work at this Botanical Garden. Professional advice and assistance have been made available both for laying out the garden and forming nurseries.

The rough estimate for starting the garden, apart from repairs of the bungalows, is as follows :—

	Rs.
Professional superintendence for starting the garden for three months	300
Under-gardeners and contingencies	300
50 coolies for three months, at Rs. 6 each	900
Roads	1,000
Possible compensation to the former owner for seedlings and plants	1,000
Repairs to forcing-house	1,500
Total	<u>5,000</u>

The expenditure required in the first instance for the improvement and extension of the Botanical Garden is to be met from the balances of the Darjeeling Improvement Fund.

The garden is to be first and foremost a botanical one: it is not to be a mere show-place, nor is it to be a vegetable or fruit-garden or nursery for the station, or a mere source of supply of bouquets for the inhabitants.

Plants of all the species of epiphytes (orchids, gingers, &c.) that will grow at the elevation of Rungaroon are to be collected and attached to the trees, so as to make it a representative piece of virgin forest vegetation. Vacant spaces are to be planted up with species indigenous to Nepal, Sikkim, or Bhutan, which do not already exist within the limits of the garden and which are likely to thrive. In short, the object will be to have as many representatives of the indigenous forest vegetation of the Himalayas as can be got to grow at an elevation of 6,000 feet.

Another part is to be devoted to such indigenous plants as are not likely to thrive in the moister and more shady forest section, and a third is to be reserved for exotic plants of botanical interest and suited to the climate and elevation.

More attention will be given to the growth of indigenous plants than to that of exotics. Every possible flowering plant growing naturally in these districts between 3,000 feet and 9,000 feet will be considered worthy of being tried either in the cleared or forest section of the garden.

As regards the exotic garden, the selection of plants will be made with the idea of representing natural orders which are not abundant, or which do not occur at all, in the mountainous parts of India. Many of the Australian *Proteaceæ* and of the European and American *Cauferæ* and *Cupuliferæ* would probably grow fairly at Rungaroon. But the selection of plants grown in the exotic garden will have to be worked out by the help of experience as to what kinds of plants are likely to thrive in such a wet climate as that of Sikkim.

This small garden is situated in the compound of the Satkhira sub-divisional cutcherry, and has continued its operations on a small scale. Nine beeghas of land were cultivated, and experiments were made in the cultivation of safflower, cotton, sugarcane, potato, European vegetables, and China

Satkhira garden.

nuts (*arachis hypogaea*). The Government subsidy to this garden has been stopped, but the continuance of the garden has been permitted on the condition that the income from sale of produce will cover the expenses, and that Government will incur no liability on this account.

The Monghyr public garden continues to receive a subsidy from Government of Rs. 300 per annum, and a contribution has been made to its resources from the Estates' Improvement Fund of the district.

Monghyr garden.

The Zoological Garden at Alipore has now become an established Government institution.

It is not necessary to set forth in any detail the reasons which rendered it desirable to establish a Zoological Garden at Calcutta, the capital city of Bengal. As stated in last year's Report, it is designed to provide both recreation and instruction; to facilitate the study of zoology; to encourage the acclimatisation, domestication, and breeding of animals, and to improve the indigenous breeds of cattle and stock.

A particular difficulty was felt in respect to the selection of a site, as for this a considerable area of ground was required, in a situation, on the one hand, not so near to the populous part of the city as to cause inconvenience, on the other hand, sufficiently near to afford due facility for popular resort.

In order to select the best available site a committee was appointed, and their attention was drawn to the several situations from which apparently a selection might be made. After considering all the alternative sites they chose one lying on the left bank of Tolly's Nullah, on either side of the road leading from the Zeerut Bridge to Belvedere. This site offers many advantages. It is on the outskirts of Calcutta, within easy reach of the native population of the southern half of the town, and of the great majority of its European and Eurasian population; it is close to the populous suburbs of Bhowanipore, Alipore, Kidderpore, and within easy distance of Garden Reach, Tollygunge, &c.; it has the great advantages of proximity of water and of shade, which last is essential for the well-being of certain animals. This site is, moreover, capable of considerable extension towards the south and west, and some of the land is attached to Orphangunge and is the property of Government.

Further, it happened that this ground was occupied by a large village which was in a very insanitary condition, and in which sanitation after long trial was pronounced to be extremely difficult. On sanitary and municipal grounds it had been decided to clear this locality on an early opportunity, and to use the land for some public purpose. The formation of the Zoological Garden gave the desired opportunity.

The land was therefore acquired by Government under the law. The property in the land remains with the Government, and is a valuable acquisition, which may prove in the future to be worth more than the amount of compensation now awarded.

The gardens were inaugurated on the 27th December 1875 by His Royal Highness the Prince of Wales, who was accompanied by His Excellency the Viceroy and the Lieutenant-Governor of Bengal, whilst all the Maharajahs, Rajahs, Nawabs, and chiefs then present

in Calcutta were invited to attend. His Royal Highness expressed his gratification at the progress which had been made in two months in preparing the gardens, and was also pleased to consent to become a patron of the institution.

An honorary committee has been appointed for the management of the gardens, and the authority and functions of the committee have been defined.

The gardens were first opened to the public on the 6th May 1876, although they were in a very incomplete state; and notwithstanding the hot weather and the rains, and the temporary closure of the Zeerut Bridge, the number of visitors went on steadily increasing.

Deer-paddocks have been constructed, also aviaries for pheasants and fancy-fowls, a bear-pit, a substantial building for carnivora, enclosures for birds of prey, a large monkey-house, and an aquarium, a band-stand, an entrance lodge for a keeper, servants' houses, a refreshment-room, and accommodation for pic-nic parties.

In addition to these, other buildings for animals and birds have been erected; an expensive sluice has been built for the supply of water from Tolly's Nullah, a skating rink has been established, and the gardens and band-stand have been provided with gas lamps. A light iron bridge, designed by Mr. Leslie, spans the serpentine water.

The live-stock of animals, birds, and reptiles has been increased as rapidly as buildings could be provided for them. A detailed list of these is kept up, with the names of donors. The names of the donors are also printed on placards and suspended on the cages in which the animals are kept.

The paid establishment of the gardens consists at present entirely of natives. A European Director at Rs. 400 a month was appointed by the committee in January, in the belief that the salary of this officer would be paid by Government; but as the Government declined to sanction the salary, the committee were unable to continue the services of so highly paid an officer. The committee subsequently appointed a European head-keeper on Rs. 100 a month; but the keeper having fallen ill, the committee determined that it would be more economical to trust entirely to a native establishment, under the supervision of their own members.

In January 1876 the committee were informed that in the opinion of the Government of India no part of the charges of the gardens should be imposed on the public revenue; and the payments on account of the keep of the animals, which had been provided from the Bengal provincial funds for several months, were discontinued from the end of July. From that time the committee have had to provide all the current expenditure of the institution, and they were for a time entirely dependent on the public for support.

Soon after a representation was made to the Government of India, in which it was pointed out that the cost of the site of the gardens, amounting to two lakhs of rupees, was borne by the Bengal Government, which also gave Rs. 25,000 towards laying out the grounds and paid the cost of establishment up to the end of July 1876; the other expenses, chiefly on the construction of buildings, being met by the committee from their own funds. It was further pointed out that the committee

complained that they had to carry on an institution which could not become a source of profit to them individually, but which might expose them to risk and liability. A recommendation was made accordingly to take over the gardens formally as a Government institution, the local Government taking credit to itself for the funds in the hands of the committee (which would, however, be kept as a separate head of account,) and accepting at its own risk all the future receipts and expenditure. The supreme Government sanctioned the above proposals, and the Zoological Garden is now a Government institution with a subsidy from provincial funds not exceeding Rs. 20,000 per annum.

A wardian case of seedlings of the Para rubber-tree of South America (*Hevea Brasiliensis*) was sent out from India-rubber. Kew by Dr. Hooker for experiment in the Botanical Garden at Howrah. These seedlings reached in excellent order. Calcutta and Sikkim having proved alike unsuitable for this species, a third part of these plants was sent to the Assam Forest Department for trial in that province. Sixteen plants were sent to forest officers in Burmah, in the hope that in the moist equable climate of the southern parts of that country a suitable home might be found for this valuable tree. The remaining plants have been retained in Bengal for artificial propagation.

Last year a number of vanilla plants were put out in the Howrah Botanical Garden under the shade of mango-trees, in the hope that in such a situation they might thrive better than in the thatched sheds under which vanilla had hitherto been grown in Bengal. These plants afford very little hope of a profitable crop. By far the finest plant of vanilla grows on the north side of an old wall in the garden. This bore, as usual, a good crop of pods, and, as usual, dropped them unripe on the occurrence of an especially hot day. It may now be concluded definitively that the establishment of vanilla culture as a profitable industry in Bengal is not possible.

During the year plants have been distributed to Ceylon, Singapore, Burmah, and the Andamans. The peculiarly slow growth of this plant tends to prevent the cultivation of it from being taken up with spirit by European planters, who, not being colonists but merely temporary settlers in the East, naturally look with little favour on crops that yield slow returns. These facts make it still more a matter for regret that the profitable cultivation of ipecacuanha as a crop at the cinchona plantation seems so hopeless, owing to the cold of the winter season, even in the warmest valleys, being too great for a species so thoroughly tropical.

The young plantation of baobab, which at the suggestion of Dr. Hooker, Director of the Kew Garden, was made in the Botanical Garden two years ago, is progressing; but it is too young yet to afford any data as to the possibility of cultivating baobab for a paper fibre with good financial results. A plant yielding an annual crop of fibre is, for economical reasons, more likely to answer than one from which a crop can be collected only at distant intervals. Among the numerous graminæ and herbaceous urticacæ and malvacæ abounding in the reserves

under the charge of the Forest Department there might be some which would yield, in sufficient quantity and at a low enough cost, a fibre suitable for paper. The attention of forest offices in Bengal has been invited to the subject. Several of the wiry grasses so abundant on the sea-coast might also possibly furnish as good a fibre as the now practically exterminated esparto of Spain and Algeria.

Two hundred plants were supplied by the Botanical Garden, Calcutta, to the Assistant Conservator of Forests, Soonderbuns. Of these eight were planted out at Khoolna, in the Forest Office compound, and 192 at a site selected for the purpose at the junction of the Ghoshkhally khal and Seepsah river. The planting was done in lines 10 feet wide and 20 feet apart, which were out in the 'null.' The young plants were planted down the centre of these cleared lines on small mounds 12 feet apart, the object of the mounds being to keep the plants above the water, which at high tides covers the low lands about Ghoshkhally. 188 of the plants are reported to be still alive and in good condition; they varied in height from 6 to 20 inches, and many had commenced to throw out fresh shoots. The eight plants that were planted in the Forest Office compound were also reported to be alive and in good condition, varying in height from 10 to 24 inches. So far the experimental cultivation of the baobab in the Soonderbuns may be considered to have been successful. But Dr. Schlich is at one with Dr. King in holding that neither from baobab nor bamboo will a marketable material for paper ever be produced. The cost of production will always be more than the manufacturers will care to pay for the article.

The Government of India forwarded for experimental cultivation in the Botanical Garden at Howrah small quantities of eucalyptus seed of the following species received from the Botanical Gardens at Brisbane in Queensland and from New South Wales:—

Eucalyptus.

- | | |
|-----------------------------------|-----------------------------------|
| 1. <i>Eucalyptus hemiphloia</i> — | 5. <i>Eucalyptus longifolia</i> . |
| (a) white box. | 6. " <i>tereticornis</i> . |
| (b) dark box. | 7. " <i>bicolor</i> . |
| 2. <i>Eucalyptus hæmastoma</i> . | 8. " <i>melanoxylon</i> . |
| 3. " <i>paniculata</i> . | 9. <i>Syncarpa laurifolia</i> . |
| 4. " <i>siderophloia</i> . | |

They were duly sown by Dr. King, but no report has yet been received on the results of the sowings.

Sanguine expectations were expressed by Mr. Routledge, an English paper-maker, that in the young shoots of bamboo would be found a raw material

Bamboo as a paper fibre.

which by a simple treatment in this country could be transmitted in a rough dry state to England, there to be manufactured into paper. It was essential to the success of Mr. Routledge's process that the bamboo shoots should be quite young and succulent; and the great difficulty which at once presented itself to persons with any knowledge of the mode of growth of Indian bamboos was that such shoots being produced in moderate quantity from each clump, and only during a limited season of the year, the proposed paper-stock making machinery

must for a large part of the year necessarily lie idle. To meet this difficulty Mr. Routledge suggested that bamboo clumps might, by proper treatment, be induced, after most of their old shoots had been cut away, to send up from the stools thus bared, regularly and irrespective of season, crops of succulent shoots suitable for conversion into paper-stock. Mr. Routledge's expectations implied a very complete change of habit in the bamboo; for it is pretty well known that bamboo clumps, if entirely cut down, yield for several years but few and small succulent shoots, and, in fact, not unfrequently die. In order, however, to submit the scheme to a trial, six clumps of bamboo in the Howrah Botanical Garden were cut down at the beginning of the rains (*i.e.* between 10th and 20th June 1876), when the buds of the young shoots of the season had completely formed and were nearly ready to burst through the soil. Soon after the cutting of the old stems these buds developed into shoots which grew with characteristic rapidity. These were allowed to grow until they began to show symptoms of becoming hard, and on 21st July they were all cut down. They were at once weighed, and gave an average of 113 pounds of wet young shoots per clump. The time of cutting was the most favourable that could have been chosen, and the crop of shoots yielded was probably as good as it would have been had the clumps remained untouched by the knife. Judging from the size of the clumps, it is calculated that at most 80 similar clumps could be grown on an acre of ground. This allows an area of 576 superficial feet to each clump, and such close planting would probably necessitate manuring. Taking the yield of these six clumps as an average, and excluding all loss from death and accident, the yield on an acre during the first year of cutting would therefore be 9,066 pounds of fresh young shoots. It must not be forgotten that freshly cut bamboo shoots are extremely succulent, and that the amount of dry paper-stock that could be got from them would bear a very small proportion to their original weight. An additional difficulty that attends the scheme is that since only fresh succulent shoots will answer, and these are of too high specific gravity to float, the cost of land carriage to the factory (a very heavy one in Bengal) would have to be incurred. The cut clumps above mentioned were well cared for; leaf mould and tank soil were laid round them, and, as compared to similar clumps in the forest, they had the great advantage of immunity from fire and from being grazed on by cattle. Since the young shoots were cut, a considerable number of thin woody twigs have arisen from the bases of the old stems. No fresh young root shoots have, however, appeared. Some such will doubtless appear at the usual time, which would be the beginning of the ensuing rainy season. These shoots will be cut at the time recommended by Mr. Routledge, *i.e.* when they are just beginning to become hard and woody; and with the cutting of these the crucial part of the experiment will begin.

The Government of India desired that experiments should be made in the hills and in the plains of Bengal with
Cuzco maize. 40lb of the Cuzco maize seed received from Peru.

The magnificent cereal known as Cuzco maize flourishes in the valley of the Vilcamaya, near the old city, but at a much lower level.

The part of this valley in which the Cuzco maize ripens is from 8,000 to 4,000 feet above the sea. Each stalk of Cuzco maize yields three or four cobs, and the harvests are at least five times as heavy as those of the similar area of ordinary Indian corn, as each plant does not cover more ground.

It was suggested that in India the Cuzco maize might be cultivated on the high lands as a food-grain, at lower elevations as a most useful green forage crop, and may also be raised as a sugar-producing plant. The 40lb seeds were distributed to various parts of Bengal, but the experimental sowings have all proved failures.

With regard to the probable success of Cuzco cultivation in India, it has been reported that, unless perhaps in the Punjab, Cuzco maize has no chance of succeeding as a crop in any part of the plains.

Concerning the hill districts, there is abundant experience to show that Cuzco will not produce grain in the Eastern Himalaya. All maize is grown on the Himalayas as a rainy season crop. In its native valley, in the Andes, Cuzco enjoys a climate, it is said, like that of Italy; and it need hardly be said that the climate of the Eastern Himalaya during the rains is not in the least like that of Italy, being hotter and much moister. The green stems of Cuzco might indeed be used as a fodder; but at present no plant whatever is cultivated in that part of the Himalaya as fodder, and it is doubtful if it would be wise to try to initiate a new cultivation by introducing a plant which will not ripen seed in the district, and of which supplies would have annually to be brought from a distance.

The north-western part of the Himalaya has a much smaller rainfall than the eastern part of the range, and its climate much more resembles that of Italy. Moreover, as a fact, the only recorded cases in which Cuzco maize has perfected seed in India occurred at the stations of Raneekhet and Simla. If more seed of Cuzco maize is to be imported by Government, it might be distributed to Europeans settled in the North-West and Punjab Himalaya, and the attention of all recipients of seed should be directed to the value of Cuzco as a yielder both of fodder and grain.

The Government of India desired to try the experimental cultivation of this grain in Bengal, and forwarded
Chenopodium quinoa. 33lb of two Peruvian varieties of the *chenopodium* (quinoa and canahua).

This grain has long been known to the Peruvian Indians, who use both the leaves and the ear as articles of food, and the stem for fuel. It is cultivated in the higher parts of the Andes of Quito and Peru, and is probably the hardiest food-grain in the world, growing at the greatest elevations above the level of the sea.

It was thought that this food-grain might usefully be cultivated in the loftier districts of the Himalayas, near the principal trade routes, such as those leading to Ladak and Sikkim, and that with this object in view seeds might be forwarded to Darjeeling and Leh, and entrusted to responsible persons who take an interest in the cultivation.

The plant flourishes at heights from 12,000 to 16,000 feet above the level of the sea, and supplies of wholesome food might thus be obtained in regions where corn will not ripen. It is worthy of note also that

the canahua stalks are reported to yield abundant supplies of alkali, quantities of which will soon be required for the cinchona bark manufactory at Rungbee.

Of the 33lb of seed supplied by the Government of India, a small quantity was sown at the cinchona plantation in Darjeeling; but as fast as the seeds germinated the seedlings died off from the excessive damp of the atmosphere. The larger part of the consignment was sent to the Deputy Commissioner of Darjeeling, who was asked to arrange for its being tried in the more elevated and drier parts of independent Sikkim, where the climate is more favourable. The reports received show that it was unsuccessful there also.

Some years ago an attempt was made to introduce this grain in the North-Western Himalaya. In that part of the Himalaya the hill people cultivate a species of chenopodium almost undistinguishable from chenopodium quinoa. They were disappointed, when the latter germinated, to find the young seedlings look exactly the same as their own familiar species.

The chenopodium quinoa is not better than the North-West Himalayan species; and in that part of the country it is not desirable to take special measures to introduce it. Indeed the experiments before made there with the Peruvian grain were not very encouraging. In the Eastern Himalaya is now seen that the climate is by far too moist. Further trials with this grain are not recommended in any part of the Himalaya.

The seeds sent by the Government of India for experimental cultivation were distributed to the Punjab Forest Department, to the Shillong farm, to the Sikkim cinchona plantation, and to the Government nursery at Raneekhet, North-Western Provinces. The results reported have not been encouraging. Chestnuts, like most large fleshy seeds, retain their vitality but a short time. They should not be gathered until thoroughly ripe; but when gathered they should, if it is wished to transmit them to a distance, be despatched with as little delay as possible, and by the quickest route. They should by no means be packed in air-tight, or even moderately close boxes, or in large quantities. On the contrary small canvas bags, or small wooden boxes with air-holes drilled in them, seem to be the best vehicles for transmission. In the cases of the Yunan chestnuts these precautions were not observed: hence doubtless their failure. A further experiment is being tried with a fresh supply of seed.

A supply of the Spanish seed was obtained in February 1876, of which 225lb were packed in dried loam and 15lb packed in different kinds of paper.

The chestnuts arrived in a very bad condition, there being no difference between those packed in different ways. They were sown in February 1877 at Rungaroon, at an elevation of 6,000 feet above the sea, and they produced in all only 72 seedlings.

The chestnut seed received this year arrived in much better condition; there are 1,050 seedlings, and germination is still going on. The quantity of seed received this year stands as follows:—

220lb packed in dry loam.

12lb packed in bags and sent out per parcel post.

So far the former have produced 971 seedlings, or 4·4 per pound of seed, and the latter 79 seedlings, or 6·6 per pound. On the whole it appears that the method of sending the chestnuts out per parcel post will prove to be the best and cheapest.

Seeds of the carob-tree were received from Italy and distributed to certain local officers for experimental cultivation. Of the seeds sent to Monghyr, some were sown in pots and some in a nursery protected from the afternoon sun. There are about 40 young trees, some grown rather more than others, but the average height is about ten inches. They are very healthy-looking, shooting out new leaves, and promise to be very handsome trees; leaves pennated. Those in the nursery have grown somewhat faster than those in pots. There is no doubt that Monghyr is well suited for the tree, just as much as Turkey in Asia, the carob-tree country. The young trees will be planted out this season, some in the garden and some in the fort. Some of the seed was also planted at the Bastipore park: there also it has grown very well, and promise to be fine trees.

During the year two applications were received from British Burmah for supplies of potato seed from Bengal for experimental cultivation in the former province. Ninety maunds of seed from Darjeeling were despatched. The result of the experiment has not been communicated to this Government.

It was stated in last year's Administration Report that the Poosah farm had been retained in the hands of Government for the purpose of experiments in raising and curing tobacco, and perhaps also as a lecture-ground in connection with schemes of technical education. The results of the agricultural experiments have not been in any respect encouraging. The tobacco grown has not succeeded. Attempts to manufacture and cure tobacco on the Manilla process were made under the supervision of Dr. Brown, but commercially these proved a failure, the produce of the tobacco having been found to have no value in the European market. It was then recommended by the local authorities that the farm should be leased to a private company for the cultivation of tobacco. Sir Richard Temple, however, thought it right to maintain the Government management for one more season, and attempts were made to procure the services of an experienced tobacco-grower from Manilla. These attempts also proved unsuccessful. In the meantime tobacco was again cultivated under unprofessional superintendence, and it was hoped at one time that a really valuable article had been produced. But the report of the trade is as unfavourable as on previous occasions. The samples "do not represent a description of tobacco suitable for the home or-continental markets, being deficient in the general character of qualities usually exported," and they are valued at from Rs. 5-4 to Rs. 5-8 per maund for local consumption only. The produce on which so much trouble and expense has been bestowed is, in fact, no better than the average produce of the country.

The curing of tobacco by Government agency on a small scale at Poosah has thus proved a failure. But Sir Richard Temple had also intended that the farm should be permanently kept up independently

of tobacco cultivation, and made use of for scientific experiments connected with physiological botany and agricultural chemistry to be conducted under the supervision of special officers. The practical difficulties which arose in the way of giving effect to these proposals, and the inutility at the present day of spending money in attempts to teach the Indian peasants physiological botany, agricultural chemistry, and a system of cropping, based, not on the experience of years and seasons, but on the theory and science of Europe, have induced Government to approve fresh proposals of the local officers for leasing out the land and buildings to private enterprise. Messrs. Begg, Dunlop & Co., to whom the Ghazipore stud lands have been let by the Government of the North-Western Provinces for tobacco cultivation, have been granted a lease of the Poosah lands and buildings for seven years, for the establishment of a *bond fide* factory for the manufacture and cure of tobacco. These gentlemen have secured the services of experienced curers, and are prepared to lay out a sufficient amount of capital to make the project a success.

In view of the further development of the tobacco trade in Bengal, arrangements have been made for carrying on a series of careful analyses of the constituents of the plant and of the soil on which it grows by a competent chemist, Mr. Wood, the Government Quinologist. Mr. Wood represented that the very insufficient laboratory accommodation in the Medical College would materially hinder the progress of the investigations, and accordingly further accommodation has been found by the conversion of a disused lecture-room in the Calcutta Medical College into a supplementary laboratory. A grant has also been sanctioned for the purchase of such apparatus as may be required, and for the employment of such additional assistance as may be required for the conduct of the work.

Tobacco.

Messrs. Anderson, Wright & Co., a mercantile firm in Calcutta, submitted samples of the Indian tobacco manufactured by them, and which they were willing to supply at a low price with a view to its substitution for the American tobacco, so largely used by the Commissariat Department. Their tobacco was reported by a number of manufacturers at home to be a good substitute for American tobacco. Under orders of the Government of India samples were sent to officers commanding regiments for test by their men. The tobacco was much appreciated by many smokers, and reported on favourably by a number of the regiments to whom samples were sent, though some expressed themselves unfavourably on the quality of the tobacco. The Government of India was, however, not willing to issue any authoritative order for the substitution of this tobacco for the American production now used by the army, on the ground that the supply of tobacco was always arranged for regimentally—a system which it did not seem desirable to alter.

At the instance of the Government of India specimens of each of the 260 different varieties of indigenous tobacco seed were collected from the several tobacco-growing districts and forwarded to Dr. Hooker, the Director of the Royal Gardens, Kew.

Forests.

DURING the year 1876-77, 809 square miles of forest were formally added to the Government reserves in tracts which had been carefully inspected in previous years.

Inspection.

Only one fresh area was inspected during the year, viz. the Berhampore sâl forest, in Dinagepore, and the result showed that it was not worth purchasing, all the valuable timber having been worked out and the price demanded for the land being very high.

The total area of reserved forest in Bengal may thus be classified :—

				Square miles.
Sâl forests with savannah, mixed forests, and Lower Hill forests containing sâl	1,057
Chair and sissu forest	107
Upper Hill forest	75
Chondri forest	1,581
Chittagong mixed forest	570
Total				3,390

The various reserves are so situated as to be able to supply with timber every district of this Government, except parts of the Patna and Bhagulpore Divisions, which must for the present depend upon Nepal and Oudh.

The work of demarcation has gone on steadily during the year, 614 square miles having been completed, which brings up the total demarcated area to 2,735 miles. Of this, however, a part, situated in Palamow, will have to be gone over again, and the area actually remaining to be demarcated may be taken to be 806 miles. The important work of preparing accurate records of the boundary demarcation has not been neglected.

The forest staff for Bengal has been fixed by the Government of India at the following strength :—

- 1 Conservator,
- 3 Deputy Conservators,
- 6 Assistant Conservators,
- 1 Sub-Assistant Conservator,

which gives about one superior officer for every 300 square miles of reserve. The scale of subordinate establishment has not yet been permanently settled, but the present cost, viz. Rs. 2,250 per mensem, is equivalent to an allowance of 13 annas per square mile monthly.

The Conservator of Forests is of opinion that at least one rupee per square mile monthly will eventually be required, or a total monthly allowance of Rs. 4,500 for subordinate office, forest, and depôt establishments.

The boundaries of the reserves in Darjeeling and Julpigoree have had traces cut along them from 6 to 15 feet broad, besides which roads have been made which will give access to 40 square miles of forest. Fourteen and a half miles of road have been made in Julpigoree. In the other divisions no work of this kind was required.

The area of new plantation was brought up to 524 acres during the year by the addition of 34 acres. These plantations are still to a great extent experimental.

Plantations.

At Bamunpokri 153 acres are planted with teak, with a view to see if that valuable wood will thrive in the Terai. Similarly experiments are being made with Spanish chestnuts in Darjeeling. It is a mistake to expend much money on attempts to introduce foreign trees. It is more useful and profitable to protect and cultivate the indigenous trees of the Bengal forests. Bamboo, for the purposes of paper-making, is being tried both in Darjeeling and the Soonderbuns; but the soil of the Soonderbuns is found to be too damp for bamboos. The *baobab* is also being tried in the Soonderbuns, and has thriven so far. But it is feared that neither from *baobab* nor bamboo will a marketable material for paper ever be produced. The cost of production will always be more than the manufacturers will care to pay for the article. In Chittagong it has been arranged to plant 100 acres yearly with teak and toon mixed, and 171 acres have already been so planted.

In the Buxa reserves an important experiment is being made with a view both to propagate *sâl* and at the same time protect the forests from fire. A dense belt of young *sâl* trees 100 feet broad is being raised along the boundaries, and it is hoped that when these grow they will effectually protect the forests and any future young plantations inside the belt from the jungle fires, which do so much damage in the forests of the Terai.

The subject of protection from fire is one of primary importance, and during the year 66,127 acres of forest were protected at a cost of only Rs. 1,546. The year was damp and favourable, but the result is matter for satisfaction.

Prosecutions were instituted for 233 breaches of forest rules (230 in the Soonderbuns alone), and convictions were obtained in 127 cases.

Forest prosecutions.

Financially, the working of the department is satisfactory and full of promise for the future, the receipts having

risen from Rs. 87,260 in 1871-72 to Rs. 2,22,401 in 1876-77. The charges have of course been growing at the same time as the department developed and extended its operations, and stood at Rs. 2,11,689, against Rs. 67,506 in 1871-72. But while these have now nearly reached their maximum, and are not expected to exceed Rs. 2,30,000 for some years to come, the receipts of the current year, 1877-78, are estimated to amount to three lakhs of rupees. Again, although the cash surplus at the close of

Revenue and expenditure.

1876-77 amounted to only Rs. 10,712, the stock in the depôts was worth Rs. 76,756 more than that in hand at the close of 1875-76, the old timber in depôt having been almost all sold off, and the stock in hand consisting now chiefly of new and massive logs. The Conservator's attention has been directed to the importance of not sacrificing the good will of the people to revenue considerations. Fees for grazing in the forests are at present too high, and give cause for irritation; and in some parts of the country the rules regarding the collection of minor forest produce are said to press upon the people.

The receipts and charges are as follow:—

Receipts.		Charges.	Surplus.	Deficit.
	Rs.	Rs.	Rs.	Rs.
Departmental timber operations.	From wood brought to depôt by departmental agency, and from confiscated, drift, and waif wood 46,101	Cost of timber operations by department and in recovering drift; half the total cost of departmental cattle, plant, and tools; and one quarter of total cost of the establishment ... 76,538	30,437
Other revenue	... From wood removed by private purchasers, &c., from minor produce, and miscellaneous ... 1,76,300	Cost in connection with removals by private purchasers; collection of dues on minor produce; miscellaneous charges; quarter of total cost of departmental cattle, plant, and tools; and half cost of establishment ... 68,522	1,07,778
Formation, protection, and improvement of forests.	Cost of forest organization; treatment and creation of forests; works for development of forest; quarter of total cost of cattle, plant, and tools; and quarter of cost of establishments 66,629	66,629
Total	... 2,22,401	Total ... 2,11,889	10,712

The area of the *Darjeeling division* is now 161 square miles, and proposals for adding 60 square miles are under consideration. The forests of this division are very varied in character, ranging from the toon and india-rubber of the moist valleys, through the sâl of the lower hills and the middle hill forests of chilauni, cherry, and birch, up to the oaks, chestnuts, and magnolias of the upper hills. All the jooméahs who resided within the reserved area have been induced to remove, compensation being awarded them on this account.

The timber operations in this division have been partly carried on by Government and partly by private purchasers. The departmental operations were in former years confined to bringing to depôt logs cut about ten years ago. These have now been sold, and new timber-cutting has commenced. The total number of trees taken out in

1876-77 was 1,699, of which 689 were removed by the department. The cuttings were at the rate of 15 trees only per square mile. The receipts from departmental operations in this division were Rs. 33,647, and the charges Rs. 21,166; for "other revenue" the figures were—receipts Rs. 21,817, and charges Rs. 11,411; Rs. 22,909 were spent on forest conservancy.

In the *Julpigoree division* the reserved area is now 390 square miles. There are five chief classes of forest, viz. lower hill forest, sâl forest, savannah forest, mixed forest, and khair and sissu forest.

Some of these forests contain mature timber, and the Buxa reserve is said to be now capable of yielding 80,000 cubic feet of sâl and sissu per annum. But the greater part of the area stands in need of re-stocking. Most of the joomeahs within the tract have been induced to leave.

The financial working of this division stands thus—

		Receipts.	Charges.
		Rs.	Rs.
Departmental operations	...	11,174	30,800
Other revenue	...	4,360	10,284
Conservancy	13,642
Total	...	15,534	54,726

The unfavourable result is due to heavy timber work and small sales. The stock in hand was, however, worth more by Rs. 71,219 at the close of the year than at the beginning. The sales were small, because the people of Eastern Bengal have a prejudice in favour of Nepal timber, which it is hoped the lower price of the Doocar supplies will soon effectually remove.

In the *Palamow division* there were at the end of 1876-77 188 square miles of reserve, including 37 square miles on the Kymore Range in Shahabad added during the year. There is some doubt as to the right of Government to the slopes of this range, and the tract is to be brought under settlement during the current cold season in order to determine the point and fix the limits of the neighbouring estates. The forests of this division have not been worked, as they are in a very reduced condition. For some years to come the working of this division is likely to entail a deficit, which, however, the Conservator does not expect to exceed Rs. 10,000 per annum.

In the *Sunderbuns division* the total area of reserve is 1,581 square miles, divided into three blocks: the Bagirhat block, of about 500 square miles, which is a soondri reserve; and the Khoolna block (699 square miles) and Satkhira block (382 square miles), which are firewood reserves. Measures are under consideration for bringing the remaining jungle area of the Sunderbuns under the control of the Forest Department. The whole of the operations in this division are carried on by private purchasers under a system of passes or permits. During the year 13,999 boats entered the reserve and took away 4½ million maunds of forest produce, paying Rs. 84,073. Much produce was also taken away without payment, and steps have been taken to check this illegal trading. The charges of the year were Rs. 40,167.

It is estimated that in 1877-78 the receipts will be over a lakh of rupees, and the charges Rs. 38,000 only.

The *Chittagong division* has an area of 570 square miles. None of the reserved area is at present worked for timber.

In the divisions of *Singbhoom*, *Hazareebagh*, and the *Sonthal Pergunnahs*, the reserves have not yet been taken over by the department.

As regards *unreserved or district forests*, the Forest Department is only concerned with such in the Julpigoree and Chittagong divisions. In the former there are now only 8 miles of open forest left, and it is intended to cut what timber is fit for cutting and to leave the area for agricultural purposes. In the Chittagong division there are upwards of 5,000 square miles of open forest, over which the tribes of the Hill Tracts wander and joom. The management of these forests rests, therefore, with the civil officers of the district. The people take free of charge what is necessary for domestic purposes, and tolls are levied by the Forest Department on forest produce exported beyond the Hill Tracts boundary. Certain restrictions are also imposed by the Forest Department on the cutting of the more valuable kinds of timber. The receipts from tolls have fallen off from Rs. 1,13,196 in 1874-75 to Rs. 65,654 in 1876-77. The cause of this has formed the subject of inquiry, and various reasons for it have been assigned by the local officers. Dr. Schlich is disposed to hold that it is the result of purely temporary causes that the market became overstocked with material in 1874-75, and that the cyclone of 1876 and the subsequent epidemic of cholera prevented the revival of trade. The question of the rates levied upon the produce is under reference at present to the Commissioner of Chittagong.

Manufactures and Mines.

THE year 1876-77 opened with reports from all parts of the province of the unfavourable prospects of the indigo crop. In Lower Bengal the October cultivation suffered from continued drought, and the spring sowings were retarded by the same cause. In Behar strong westerly winds prevailed, under the influence of which the plants languished.

But notwithstanding these gloomy prospects the estimates eventually framed of the probable outturn of indigo in the year exceeded the actual produce of the preceding year, 1875-76.

The following statement, prepared from Messrs. William Moran & Co.'s market reports, shows the actual yield of the years 1874-75 and 1875-76, and the estimated outturn of 1876-77 :—

		1874-75.		1875-76.		1876-77.	
		Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
LOWER BENGAL.	Furzedpore	313		342		...	
	Jessore	3,407		3,056		3,220	
	Nudda	3,740		3,933		2,970	
	Midnapore	1,437		1,342		900	
	Burdwan	1,020		542		1,060	
	Maldah	1,228		1,117		1,100	
	Moorsheadabad	3,286		3,522		3,620	
	Rajshahye and Pubna	1,360		985		1,400	
	Bhaculpore	5,510		2,497		2,830	
	Purneah	7,190		2,915		4,800	
	Rungpore and Nattore...	4,069		3,057		2,000	
			30,560		23,308		24,000
BEHAR	Tirhoot and Monghyr ...	35,898		19,775		42,000	
	Chumparun	18,338		12,571		21,500	
	Chupra	14,530		9,664		20,000	
			68,766		42,010		83,500
NORTH-WESTERN PROVINCES	Benares	7,343		9,911		7,500	
	Doab	21,133		27,631		22,000	
			28,476		37,542		29,500
			1,27,802		1,02,860		1,37,000

It will be seen that the outturn of indigo in 1874-75 was 1,27,802 maunds, in 1875-76 1,02,860 maunds, while the estimate of 1876-77 rose to 1,37,000 maunds. The larger figures for the year 1876-77 are due to the unprecedented yield of *khoonties*, and to the extension of cultivation in Behar.

It is a well known fact that the indigo produce of one year is only sent down to the Calcutta market for exportation in the following year. Consequently, with the falling off of production in 1875-76, the exportation of this valuable staple in 1876-77 shows a decrease as compared with the exports of 1875-76.

The following statement shows the countries to which indigo was exported from Calcutta during the years 1875-76 and 1876-77 :—

WHITHER EXPORTED.	1875-76.		1876-77.	
	Quantity.	Value.	Quantity.	Value.
	Cwt.	Rs.	Cwt.	Rs.
United Kingdom	51,524	1,38,94,175	40,833	1,38,19,784
Austria	6,411	20,05,784	6,813	21,05,828

Total	84,388	2,35,58,378	69,495	2,35,96,663
Total Mds.	1,15,261	94,871

It was stated in last year's Administration Report that quantities varying from 5,000 to 12,000 maunds of indigo were reserved for local consumption ; the following figures will serve to illustrate this fact for the last three years :—

				Mds.
Produce, 1873-74	79,277
Exports, 1874-75	74,083
Surplus reserved for home consumption	5,194
Produce, 1874-75	1,27,802
Exports, 1875-76	1,15,261
Surplus reserved for home consumption	12,541
Produce, 1875-76	1,02,860
Exports, 1876-77	94,871
Surplus reserved for home consumption	7,989

In the province of Bengal tea is cultivated more or less in the Rajshahye and Cooch Behar, Dacca, Chittagoug, and Chota Nagpore Divisions.

TSA.

Rajshahye and Cooch
Behar Division.

In this Division tea cultivation is confined to the districts of Darjeeling and Julpigoree.

In the district of Darjeeling there were 132 gardens at the close of 1876, against 121 gardens in 1875. The total area of land included in the several concerns is

106,637 acres, out of which 95,724 acres are held under the Waste Land Rules, or taken up under cultivation leases, and 10,913 acres are lands held on the ordinary district tenure and acquired from the terai jotedars. In 1875 the land so held and used for tea cultivation was 8,236 acres, and it is likely that there will be a further increase in years to come, as the tenants known as jotedars hold much land fit for tea and not so well suited to other crops, and there is a great demand for such lands.

Out of the total area of 106,637 acres included in the tea concerns, 25,028 acres are returned as actually planted, as against 22,162 acres in 1875 and 14,503 in the beginning of 1873; so that more than 10,000 acres have been opened out within the last four years: and it seems probable that the cultivation will go on increasing unless checked by difficulties about labour, of which, however, there are no signs at present.

The outturn of tea for the year 1876 was 4,181,622lb, or 52,270½ maunds, as against 4,610,758lb, or 57,634½ maunds, in 1875. The smallness of the outturn in 1876 was owing to the season being unfavourable, and also to the endeavours of the manufacturers to make a comparatively small quantity of good tea in preference to a large outturn of second-rate quality. The result was that the tea made in 1876 fetched much higher prices than the larger quantity made in 1875, and of course the gardens made greater profits in consequence.

There are 24 Limited Liability Tea Companies in Darjeeling, and 17 Associations not registered under the Act. There are 70 private gardens, two or three of which in some cases belong to the same proprietors. Six gardens are worked by the Land Mortgage Bank. Some natives also have of late begun to cultivate tea. There is one Company composed entirely of Bengalees, and at least four private gardens are owned by them.

Machines for rolling the tea leaf, worked by steam, have been generally introduced into this district. Attempts have been made, but without success, to substitute hot air or steam for the present method of drying tea over charcoal fires.

During 1876 there was an outbreak of cholera in the district, from which the coolies of many gardens suffered severely. The Deputy Commissioner thinks, however, that most planters now understand the importance of keeping the lines in which their coolies live clean and free from overcrowding, and of preventing the water-supply from pollution; but it is complained that the coolies themselves are averse to all sanitary measures, and look upon them as unnecessary and harassing.

In the district of Julpigoree tea cultivation is still in its infancy.

Julpigoree.

This is the first year in which any report on tea has been received from this district. Not a single garden is yet "mature," and therefore it is too soon now to say anything as to the prospects of the tea industry in the district, though there is already great demand for land. The majority of the tea

plantations in existence or contemplated lie in the extreme north of the district, bordering on the terai in pergunnah Changmari, skirt-
ing the sides of the Dalimkote road. A thana has been established
at Karnute, in the neighbourhood of the more advanced tea gardens.
This neighbourhood has been cultivated somewhat longer than the more
northerly parts of the district, and the jungle has been to some extent
reclaimed. For this reason it is more healthy for Europeans than the wild
and jungly tracts which border the Dalimkote road. In the latter place
the health of the planters has suffered as much as, if not to a greater
extent than, in the terai, and the abandonment of plantations by
managers, who are compelled to recruit their health elsewhere, has
proved undoubtedly detrimental to tea interests, and will probably
largely increase the establishment charges. The new gardens are not
found so unhealthy for coolies as might have been expected. The
labourers consist for the most part of Nepalese and Lepchas. There is not
at present much difficulty experienced in procuring labour, but ultimately
it is feared that if the gardens prove as unhealthy as the terai plan-
tations, Julpigoree planters will find difficulty in attracting the hillmen.
All the coolies have to pass through a large belt of land, the Darjeeling
terai, when demand for labour is extensive, and where every effort is
made to intercept coolies on their way to Julpigoree. The Deputy
Commissioner apprehends that the terai demand for labour will eventu-
ally prove a very expensive factor in the cultivation of tea in
Julpigoree.

While there were only three plantations containing 288 acres
under plant in 1875-76, the number of gardens had increased during
the year under report to thirteen, containing 818 acres under plant. The
total outturn was 369 maunds, against 70 maunds in 1875-76, of tea
manufactured mostly from the leaf of immature plants, and partly from
that of mature plants.

In this Division tea is grown only in the districts of Dacca and
Mymensing. There are two gardens in the former
Dacca Division. belonging to Nawab Ahsanullah and Rajah Kali
Narain Roy, and one in the latter district, owned by the Maharajah
of Shooshung. The area under cultivation in these gardens, and their
produce, are shown below:—

	Area.	Outturn.	
		1876-77.	1875-76.
	A. B. P.	Mds.	Mds.
Nawab Ahsanullah's garden	10 0 0	23½	16½
Rajah Kali Narain Roy's "	21 12 18	23½	42
Maharajah of Shooshung "	53 3 0	4½	67½

Tea gardens are springing up in all districts in this Division. The
Chittagong Division. only difficulty in the way of almost indefinite
extension of tea cultivation in this Division lies in
the question of labour. Local labour being both few and dear, planters
have to import labour from outside at great expense and many risks.

There are twenty plantations in Chittagong, one in Noakholly, and four in the Chittagong Hill Tracts. The area brought under cultivation during the year 1876-77 consisted of 1,763 acres in Chittagong, against 1,640 acres in 1875-76; 16 acres in Noakholly, the same as in the previous year; and 450 in Chittagong Hill Tracts, against 1,052 of the previous year. The figures of the Chittagong Hill Tracts for 1876-77 are exclusive of those of the Halda Valley, which is the largest concern in this district, and from which no returns have been obtained.

The total yield amounted to 148,629lb, or 1,857 $\frac{1}{4}$ maunds, against 147,447lb, or 1,843 maunds, in the previous year in Chittagong; 600lb, or 7 $\frac{1}{2}$ maunds, in Noakholly, against 360lb, or 4 $\frac{1}{2}$ maunds, in 1875-76; and 46,511lb, or 581 $\frac{3}{8}$ maunds, in Chittagong Hill Tracts, against 168,760lb, or 2,109 $\frac{1}{2}$ maunds, in the previous year. The figures of the Halda Valley of 1876-77 are not available.

In this Division tea cultivation is confined to the districts of Chota Nagpore Division. Hazareebagh and Lohardugga, and in the latter district it has been commenced but recently.

During 1876-77 the season was most disastrous owing to the prolonged drought; and the yield in the older district, Hazareebagh, was only 596 $\frac{1}{2}$ maunds, against 1,185 $\frac{1}{2}$ maunds in 1875-76, although the area under plant remained the same, namely 719 acres. There are three plantations in Hazareebagh. In Lohardugga many new plantations have been opened during the year. There are at present 17 gardens in the district, which are all young, and in many of which cultivation has hardly yet commenced. The total area under plant in this district is 686 acres, and the aggregate yield during 1876-77 was 667 maunds, against 677 maunds of the previous year.

The following is a general account of the manufactures and mines of the several Divisions in Bengal during the year under review:—

In this Division the cotton, jute, and paper mills, and iron manufactures, are deserving of prominent mention.

Burdwan Division. The most important seats of these industries are in the district of Howrah. Within the limits of the police-station of Howrah are four iron manufactories, in which rails, pipes, weights, and other iron works, are made. Then there are the Bowreah jute and cotton mills in thana Oolooberiah, which supply the Calcutta market. At Bally there are a paper mill, a cotton mill, and a jute mill. Nearly the whole of the river-bank from Bandaghât to the Government salt golahs is interspersed with dockyards for the repair of ships. At Seebpore there are three jute mills. All these industries are in a more or less thriving state.

Next come silk and indigo, in both of which the principal concerns are owned by Messrs Watson & Co., in the district of Midnapore. The year was about an average one for indigo, of which the output is estimated at 1,800 maunds. In Burdwan the most important works are Messrs. Burn & Co.'s potteries and the Bengal Iron Company's works at Raneegunge. Silk cloth and tussar are made in Burdwan, Midnapore, and Bankoora, and *kansha* plates, brass utensils, and pottery in Burdwan and Midnapore. The production of silk is estimated at 3,000 maunds, valued at Rs. 24.00,000. The indigo trade in Burdwan and Bankoora is in a declining state. There are country

looms for jute and cotton all over the Division, and in each district a large number of weavers turn out a good quantity of cotton cloth, which meets not only local wants, but also supplies the Calcutta market. The following figures, taken from Dr. Hunter's Statistical Account of Bengal (volumes III and IV), show the number of such weavers in each district of the Division some years ago :—

Burdwan	24,559
Bankoora	6,685
Beerbhoom	7,531
Midnapore	26,276
Hooghly	}	17,019
Howrah					

Small mats are a speciality of Midnapore, as are also stone plates and cups made from a soft stone found in the western hills. Boat-building also may be included among the manufactures of this district.

Under the head of mines may be mentioned the collieries at Raneegunge and its vicinity, the stone quarries at Sussunia, and the chalk quarries in Bankoora. The coal trade of Raneegunge is reported to have been dull during the year, but the Sussunia stone quarries are now being more extensively worked. A discovery has been made in Raneegunge of lead and gold ores. The lead ore is reported to be very rich, and the seam very thick; but the gold ore is the reverse, and probably would not repay working. Under this head may be mentioned also the stone excavations in the hills in Midnapore, at which stone plates and cups are manufactured.

There are no mines in the Presidency Division. The principal

Presidency Division.

The Government gun foundry at Cossipore.

" " powder factory at Echapore.

" Government cartridge and cap factories at Dum-Dum.

" Burranagore jute mills, at No. 5, Balliaghatta road.

" Gouripore jute mills.

" Oriental Gas Company at Sealdah.

" " jute manufactory "

" Samnuggur jute factory.

" Sealdah "

factories in the district of the 24-Pergunnahs are noted in the margin. Besides these large establishments there are in the neighbourhood of Calcutta numerous small native castor-oil mills, saltpetre refineries, sulphuric acid, nitric acid, and vermilion factories. Outside the suburbs of Calcutta there is a large rice-husking mill at Canning, belonging to the Port Canning Company. Sugar and molasses are manufactured in large quantities in the north-east of the district by native methods. Coarse cotton cloths are woven in small quantities in all parts of the district, and a fine

coloured description in the Diamond Harbour sub-division. Brass work flourishes at Panihaty, in the Barrackpore sub-division, and locks of excellent quality are made at Natagore. In the Satkhira sub-division lime is made from shells, and coarse pottery is everywhere produced.

Of the manufactures in the district of Nuddea that of indigo holds the first place. This industry is carried on throughout the whole district, but is most important in the sub-divisions of Chooadangah

and Meherpore. No precise figures have been obtained showing the outturn for the whole district, but there is no doubt that the results for the past year were extremely poor. The 29 factories in the Chooa-dangah sub-division, with a total cultivation of 47,000 beeghas of land, produced 1,250 maunds only of indigo, and the outlay of the year was scarcely recovered by any of the factories. In the Kooshtea sub-division the results of the year are said to have been disastrous: not only was the season's outturn short, but the quality of the dye was bad, and the prices fetched were low. As a consequence the cultivation has been wholly abandoned in some factories, while in others a crop has been grown only with the object of enticing purchasers. In the sudder sub-division the proprietors of the principal factory are giving up indigo to a large extent and undertaking other ventures. It is feared that indigo-planting on high lands and depending on borrowed capital is not likely for many years longer to repay the expense of European supervision. The co-operative system, which was tried a few years ago, under which the plant was grown by the ryot and the profits shared with the manufacturer, has not been successful, the ryots finding it unprofitable. There can be no doubt that the natural tendency of profits in the various departments of trade to equalize themselves and to fall to a minimum must in time drive out the unsound system of indigo-planting which can flourish while a cultivator gives his share of the product at inadequate rates, and which even then is dependent on the speculative results of a lucky year to meet the liabilities incurred in keeping up the concern in ordinary times. Indigo, however, may still be cultivated to a profit, like jute or any other staple, and small capitalists may yet be seen taking up and working single factories to their own advantage and that of the country at large.

The manufacture of molasses and sugar comes next in importance to indigo. These are made from sugarcane and from the juice of date-trees, which are cultivated in large numbers in the eastern part of the district. The centre of the sugar-refining trade is at the town of Santipore. There are also one or two other less important refineries in the Bongong and Ranaghat sub-divisions. Cotton goods are also manufactured to a large extent, and chiefly at Santipore, Kishnaghur, and in parts of the Kooshtea sub-division. It is estimated that there are 985 looms still at work in the Chooadangah sub-division, which supply one-fifth of the whole local consumption of the sub-division. There is no doubt that, as in other parts of India, the competition of Manchester has had a most injurious effect on this trade, and that the gradual introduction of machinery in this country will still further tend to destroy it. There are many workers in metal throughout the district, and large manufactures of brass utensils are carried on at Nuddea, Dowlutgunge, and Bajrapore.

Silk is the most important manufacture of the Moorshedabad district, but the industry, though partially revived of late, is fast decaying. The Collector writes as follows regarding the prospects of this trade and the system on which it is carried on:—"In the year under report a temporary improvement took place in prices, but I fear in the present state of the silk market a reduction of something

like 50 per cent. is inevitable. The system adopted by the principal firms which have filatures in the district is to fix the price of cocoons so as to manufacture silk at the market rate prevailing at the commencement of each season. These cocoons are bought from brokers generally under a pecuniary advance from the filature, and the broker is bound to buy them from the rearer at a still lower price than he has to get from the filature. The rearers thus suffer the heaviest loss owing to their being compelled to sell at any price; and as they are not men of much capital, a continuance of low prices must generally ruin them. Many have been ruined already, and it is to be feared hard times are in store for those who still carry on the business, although the year under report has on the whole been favourable for them, owing to a comparative failure in the European silk having temporarily brought the Bengal article in requisition."

The three principal firms who have filatures in the district are Messrs. Watson & Co., Lyall & Co., and Payne & Co. Silk-weaving has also shared the general decline of this industry, but it is still carried on in many villages under contract and on advances received from wholesale dealers. The cultivation of indigo is almost entirely confined to the country to the east of the Bhagiruthee and to the northern thanas of the district adjoining the Ganges. The factories are mostly in the hands of Europeans. The outturn of the past year was larger than that of the year preceding, and the dye fetched better prices in Calcutta. In the interior of the district there is a somewhat primitive iron-smelting establishment at Narainpore; and at Berhampore, Moorshedabad, and Baloochur there are a few workers in ivory. Safflower and lac are also prepared on a limited scale in different parts of the district.

Date sugar and indigo are the staple manufactures of the Jessore district. Owing to the high prices at which molasses and sugar were sold during the year a great impetus was given to their manufacture, and every available tree, whether young or old, was tapped. Sugar-cane was also cultivated to a larger extent. New factories were opened at Kotechandpore and other places, and consequently the outturn generally was larger than in any previous year.

As already stated, the outturn of the indigo crop was a failure. It is calculated that in the three large indigo concerns in the Jhenida sub-division, consisting of about 20 working factories under European supervision, only 1,734 maunds of dye were obtained, while in the Narail sub-division the produce did not exceed 70 maunds.

Among other manufactures, that of dorma mats, boots, cloth, and brass utensils deserve notice. With the exception of the cloth manufacture, all are said to be flourishing.

One of the principal manufactures of the Division is silk, which is now confined entirely to Rajshahye. There are two European firms in this district who manufacture silk, viz., Messrs. Robert, Watson & Co., who own a large number of filatures, and Messrs. Louis, Payne & Co., who have two large filatures, in which steam power is used to turn the guys. The former firm manufacture for sale, and the latter for their houses at Lyons. As was stated in last year's report, the manufacture of silk has declined considerably of late years. During

Rajshahye and Cooch
Behar Division.

the year of report, however, there were indications of a slight improvement in this industry, owing doubtless to the failure of the outturn in China.

In Bogra the breeding of silkworms has re-commenced owing to a slightly increased demand for silk in Calcutta; but all the cocoons go to Taherpore, in Rajshahye, for sale. The breeders, however, say that owing to a large failure among the worms this source of remuneration has for the present ceased. The woven silk of Bogra, known by the name of "garrad," is so little in demand that the weavers keep none in stock, and only make it to order.

Indigo is manufactured somewhat largely by European firms in Rajshahye, and to a slight extent by native capitalists in Rungpore, but it has ceased to be a flourishing industry. It has been given up entirely in Bogra.

As already noticed, the outturn of tea in Darjeeling was not so good as usual, owing both to the prolonged drought at the beginning of the year and to the somewhat early cessation of the rains. The falling off in quantity was, however, fully counterbalanced by the improvement in the quality of the tea manufactured. Very good prices were obtained, and it is believed that the profits realized were higher than in previous years, when the yield was much larger. Tea cultivation is being rapidly extended in the Dooars of Julpigoree. There are at the present moment 44 plantations in various stages of progress, and several fresh applications for land have been received during the year of report. The soil appears well suited to produce teas of good quality. Labour is procurable in sufficient quantities and at tolerably moderate rates; and if the unhealthiness of the climate can be successfully combated, there is every reason to believe that the cultivation and manufacture of tea in this district will prove to be a very thriving and remunerative industry.

Among other manufactures deserving of mention there is a coarse kind of silk made in Bogra and Rungpore from the castor-oil worm. It is manufactured chiefly for private use among the higher classes, and not for sale. Molasses are also prepared to some extent in these districts. Gunny is made from jute in large quantities at the Serajgunge jute mills, and also to a lesser extent in Dinagepore, Rungpore, and Julpigoree. Paper is manufactured in Pubna and Rungpore; but this industry is said to be dying out under the influence of European competition. Cloth is made from jute and cotton for home wear in Dinagepore, Rungpore, and Julpigoree; brass and bell-metal utensils are made in large quantities in Rajshahye; pottery of the coarsest description in Dinagepore; and carpets of fine texture and quality in Rungpore. There is a colony of ivory-turners in the Kurigram sub-division of the last-mentioned district; they appear to have settled there many years ago, but their industry is fast dying out. They still manufacture articles from ivory to order, but find very few customers. Tobacco will probably be an important manufacture of the future in Rungpore and Bogra, where the *poli*, or rich alluvial lands, are admirably suited for the cultivation of this plant.

The prospects of the Division as regards coal and copper-mining are as yet uncertain.

There are no mines in this Division. As regards manufactures there is little to add to what has been said in previous reports.

Dacca Division.

In Dacca, muslin at all approaching in fineness that which some years ago had so wide a reputation is now rarely made, and only to express order. Embroidery, the manufacture of ornaments out of shells, and silver filigree work, are a good deal carried on in the town.

Oil is largely made in the Manickgunge sub-division, at Merkadim, in Moonsheegunge, and at Naraingunge.

Iron and brass utensils are made in the town of Dacca and in South Biokrampore. Country cloth is made all over the district, but the industry is a failing one, as English piece-goods are rapidly supplanting it. Gunny is manufactured to a limited extent only in the northern part of Manickgunge sub-division. Goor from sugarcane is made all over the district; from date, chiefly in the Manickgunge sub-division and in thana Nowabgunge.

In Furreedpore, Mymensing, and Tipperah fish continues to be preserved,—in the former by a salting, in the two latter by a drying process. This industry is certainly increasing in Goalundo, where it has been specially encouraged by allowing a drawback of duty to the extent of Rs. 2-12 a maund on all salt sold for this purpose. In 1876 there were 4,835 maunds of fish salted, as against 1,363 maunds in the preceding year. The work is chiefly carried on in June, when as much as 300 maunds of fish have been brought into the enclosure in a single day.

Another industry in Furreedpore is the manufacture of sugar, both from the date and cane, which is largely carried on in the Goalundo sub-division: indeed, to one of the large marts, Godar Bazar, as much as 1,00,000 maunds of date-tree goor are brought annually, and of this quantity some 90,000 maunds are converted into sugar. Date-tree goor gives rather a larger proportion of sugar than cane, the quantities being 10 and 12 seers of sugar respectively to one maund of goor. The manufacture is of a very rough kind: the goor is simply boiled down and then turned into big earthen pots, from which the treacle is allowed to drain. The sugar is then dried in the sun and packed in gunny bags, no further attempt at refining it being made.

The other manufactures in this district are oil in large quantities, indigo in small, some brazier's work in Madaripore, earthen jars on the banks on the Dol Samudra, a coarse kind of paper in the Pangsha thana, and blankets in Baliakandy.

In Mymensing, besides an extensive manufacture of brazen vessels in Kagmari, in the Attia sub-division, cheese and oil-making are extensively carried on, the former in the sub-division of Kishoregunge, the latter generally all over the district. A coarse paper, seetulputtee mats, and an imitation of Dacca jewellery, are also made, but only to a small extent.

In Backergunge the chief manufactures are sugar in the Perozepore sub-division and in thana Gournuddy in the head-quarter sub-division, and oil at Nulchitty and Dukhin Shabazpore, where also date

sugar is manufactured to a certain extent. Brazen utensils are made at Sahebgunge, iron implements at Uzerpore. seetulputte mats in Backergunge, gold and silver ornaments in the Patoakhally sub-division, and some earthenware of a rude kind in that and the Perozepore sub-divisions. Here, too, is made a coarse kind of cloth used by the lower classes.

In Tipperah there is but little in the way of manufacture. Cloth making, which, it is said, used to give employment to about one-tenth of the population of the district, is rapidly on the decline, the Mahomedan weavers having taken to agriculture, their cloth not being able to compete with Manchester piece-goods. Beyond this and a little brazier's work, gunny-making, and basket-weaving, there is nothing. Boat-building is carried on more or less in every district of the Division, but chiefly in Dacca, Backergunge, and Mymensing.

In the Chittagong Division there are no mines at present : possibly some mineral wealth may exist in the range of hills to the east, but nothing has been discovered as yet. Of manufactures, too, there are none which are important. Ordinary cloth for the use of the lower class ; carpentry work, such as desks, tables, and chests, &c. ; smiths' work, such as daos, kodalties, ploughshares ; jute-work, such as fishing nets, and similar other things used locally, may be said to exhaust the list of manufactures of the Division.

The principal articles of manufacture in this Division are opium, indigo, and saltpetre. The cultivation of poppy is popular both with zemindars and ryots. The former like it because the periodical advances which the ryots receive are applied in great part to the payment of rents, and the latter because of the profits, as well as of the protection, which they receive from the Opium Department. This fact is in striking contrast with the general opinion regarding indigo cultivation, which is another important source of local industry.

Saltpetre is manufactured very largely in the districts of North Behar. The profits of the trade seem, however, to be monopolised by the refiners, who buy the crude article from the Nooniahhs at Rs 2 or Rs. 3 per maund, and sell it, after a cheap process of refining, at Rs. 8 in Calcutta. The Nooniahhs themselves are a poor and miserable class, earning little more than Rs. 4 per month. The restrictions on the sale of the coarse salt evolved in the manufacture of saltpetre have materially injured their condition. The Collector, however, believes that even now much salt is illicitly passed into consumption from the Nooniahhs' works. The Lieutenant-Governor, having recently examined this question, came to the conclusion that there has been no adequate gain to the revenue from the maintenance of the costly and irritating preventive establishments now employed, and has recommended to the Government of India their entire withdrawal.

The other local manufactures are not of much importance. The cultivation of tobacco has of late increased in Mozufferpore, and the total area under plantation cannot be less than 20,000 beeghas. It is believed that the cultivation pays when carried on on a small scale, but that it always fails when undertaken on a large scale. Sewan still

continues to retain its celebrity for its pottery and brass articles. The Gya blue-stone is successfully manufactured at Pathalkati, a small village about 20 miles north-west of Gya. The stone vases, cups, and plates, are much prized by the pilgrims who resort to Gya from all parts of the country.

There has been no fresh discovery of mines during the year under review, and thus there is nothing to add to what has already been said on the subject in previous years.

Of the manufacturing industries in the Division, indigo is the foremost. All the district officers were last year

Bhagulpore Division.

agreed in thinking that though indigo-planting was by no means in so flourishing a position as formerly, there was yet on the whole a good understanding between the planters and ryots. In Purneah this was said to be particularly well marked, owing to the fact that most of the planters there were resident gentlemen, who had lived in the district for years and held jotes and putnees of their own, as well as farms for terms of years. In this district the ryots cultivate indigo on their own account, though they will not sell to outside factories. The state of indigo matters in Maldah, however, are found to be on a far less satisfactory footing. There are four indigo concerns in this district, with all of which the district officer had some trouble during the year. In fact, the relations between planters and ryots are not by any means amicable at present. It is stated that the same system of cultivation which prevailed in Tirhoot is common in Maldah; and the ryots are, in fact, described as being in a state of very unwholesome excitement. The district officer has been directed to make careful inquiries as to the true state of things.

Silk, which in Maldah is an important staple, was more profitable during the year, both to the manufacturer and rearer of cocoons.

The chief manufacture of Orissa is salt. In the tract north of the

Orissa Division.

Brahmini *punga* salt is made by the process of boiling; but in the southern portion of Orissa, between the Ganjam frontier and the Kushbhadra river, the kind of salt called *kurkut* is produced by solar evaporation. This industry, which now affords employment to the indigent population of the borders of the Chilka Lake, is threatened with extinction by the competition of similar salt manufactured by the Madras Government under regulations more favourable to the wholesale dealers, and imported in large quantities from Ganjam. Salt manufacture has almost disappeared from Cuttack; and in Pooree large stocks are left unsaleable in the manufacturers' hands. The following statement illustrates the present condition of the salt industry in Orissa:—

DISTRICTS.	Total adults.	Total population.	Amount of salt manufactured.	Consumption in district.	Salt revenue levied in Bengal.	Consumption by adults per head.	Consumption per head of population.
			Mds. s. c.	Mds.	Rs. A. P.		
Cuttack ...	978,733	1,494,784	10,043 10 0	2,07,898	77,752 8 6	8 7	5 9
Pooree ...	507,302	769,674	2,32,187 28 0	98,770	3,04,816 13 6	7 12	5 3
Balasore ...	502,640	770,232	1,31,739 16 0	99,008	4,95,562 0 0	7 14	5 2
Total ...	1,988,675	3,034,690	3,70,970 14 0	4,06,674	8,78,131 6 0	8 2	5 5

It will be seen that while Cuttack, with a population of a million and a half, consumed 2,07,898 maunds, it produced only 10,043 maunds within its own area, yielding to the Bengal Government a revenue of only Rs. 77,752. In fact only 5 per cent. of the salt consumed in Cuttack paid revenue in Bengal, the remainder having already paid revenue to Madras. In Balasore, where *punga*, or salt made by boiling, is chiefly used, a population of 770,000, or half that of Cuttack, consumed 99,606 maunds, but produced 1,31,739 maunds, and paid Rs. 4,95,562 duty to this Government. The Pooree manufacture amounted to 2,32,187 maunds, but the merchants were disappointed of their usual market in Cuttack, and a large proportion of the stock is now stored at Pooree. The following figures of the salt revenue in Orissa for the last four years show clearly that the manufacture of *kurkutch*, or sun-evaporated salt, is declining :—

	RECEIPTS—SALT REVENUE.			
	1873-74.	1874-75.	1875-76.	1876-77.
	Rs.	Rs.	Rs.	Rs.
Cuttack	1,34,003	50,240	42,519	77,752
Pooree	6,86,755	5,74,059	3,85,446	3,04,816
Balasore	4,58,285	4,47,577	4,83,514	4,95,862
Total ...	12,79,043	10,71,885	9,11,479	8,78,130

The Government of India have been requested to sanction a reduction of the duty on *kurkutch* salt in Pooree from Rs. 2-4 to Rs. 2 per maund, and the question is still under their consideration.

There are no mines, and only one or two insignificant stone quarries, in Orissa. The manufacture of gold and silver filigree work continues to flourish in Cuttack town. There are no other manufactures of importance.

No manufactures of any importance exist in Chota Nagpore.

Chota Nagpore Division. Iron ore of good quality is found in a nodular form in many parts of the Division, and the iron-stone beds of the Karanpura coal-field to the south-west of Hazareebagh contain a high percentage of the useful quality of iron. No attempt, however, has yet been made to work the ore on a large scale, and smelting is carried on only by rude, aboriginal methods. Agricultural implements and weapons required in the neighbourhood are made by village smiths, and a large quantity of the smelted metal is said to be exported to Behar. Soapstone platters and cups are made from the quarries in Manbhoom and Singbhoom, but the industry is of trifling importance. Lac manufacture is carried on by several native firms in Manbhoom, and by a European company at Dorunda, the cantonment of Ranchi. The latter place is a convenient centre for the collection of the raw material, and for working it up into shellac or lac-dye. Large supplies of stick-lac can be drawn from Chota Nagpore itself, and from Raipore and Sumbulpore in the Central Provinces; while abundant labour is to be had in Ranchi at an average rate of an anna and a

quarter per day. The industry, however, appears to be a declining one. Lac-dye cannot compete in the market with the cheaper, though less durable, aniline dyes; and the stock of shellac now in Europe is known to be out of all proportion to the probable demand. Five coal-mines are now at work in Hazareebagh, and the resources of the district in this respect are not yet developed to their full extent. The rich coal-fields of the Karanpura Valley are still untouched by systematic mining; but the locality is so difficult of access that there is no immediate prospect of this coal being brought into the market. The Commissioner of the Division lays some stress upon the possible importance of the Rajhara coal-field in Palamow to the success of the Sone canal; but there is some reason to fear that, owing to the limited area occupied by the coal-bearing strata, and the paucity of workable coal-seams, the economic value of this field is small.

Attempts were made in former years by two European companies to work the copper-mines of Singbhoom, but both were failures, partly because the scale of management was extravagant, and partly because the nests in which the copper is found had been exhaustively worked by Jain miners many years before. No fresh enterprise of this kind has been set on foot. Tin, copper, and antimony, have at various times been mined in Hazareebagh, but on a very limited scale. Mica is still worked in the north of Khurruckdiha and exported both to Calcutta and Behar. It is in considerable demand among well-to-do Mahomedans for the ornamentation of *taziyas* at the Mohurrum.

Trade.

THE total value of the imports by sea into the Lower Provinces during the last five years is as follows :—

Ditto of treasure	1,05,000	1,44,413	3,87,597	1,67,785	2,04,395
Exports of stores	461
Ditto of treasure
Total ...	64,04,339	64,51,466	68,20,848	56,83,018	66,25,167

The imports, consisting of stores, are almost entirely from the United Kingdom; and the exports, which are small as compared with the imports, are for the most part to Ceylon and the Straits Settlements.

Excluding Government transactions, the total value of the foreign trade of Calcutta, both in exports and imports, during the last five years was as follows :—

	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.
	Rs.	Rs.	Rs.	Rs.	Rs.
Imports ... { Merchandise ...	15,21,22,435	14,88,92,200	17,32,16,378	17,73,98,820	16,66,74,247

... { Treasure ...	7,59,808	42,30,913	75,81,700	74,59,428	10,38,308
Total Exports ...	24,37,91,241	22,88,01,977	22,45,79,937	24,30,34,118	26,55,73,122

The trade with the treaty ports of China, with the Straits Settlements, with Australia, and with Austria, showed a decline; while the transactions with the United Kingdom, Hong-Kong, the United States, France, Ceylon, the Mauritius, and Italy, rose in value during the year. The following statement shows the trade with foreign countries by the Suez Canal :—

	Imports.	Exports.	Total.
	Rs.	Rs.	Rs.
1871-72 ...	9,09,46,164	5,45,47,715	14,54,93,879

Spices	9,72,682	4,80,519	10,16,420	14,62,678	15,86,969
Umbrellas	8,07,711	5,51,099	6,75,661	13,46,642	7,75,312
Woollen goods	44,72,166	33,75,279	26,60,608	47,50,976	45,48,690
Other articles except salt	1,38,90,886	1,40,73,935	1,44,11,403	1,54,86,799	1,47,12,154
Total	14,56,09,403	14,21,63,446	16,66,87,655	17,23,31,165	16,31,63,902
Salt	65,13,032	67,23,754	65,28,723	50,67,655	35,10,345
Grand Total	15,21,22,435	14,88,92,200	17,32,16,378	17,73,98,820	16,66,74,247

The last three years have witnessed a progressive fall in the value of the imports of apparel into Calcutta. In 1874-5 these amounted to Rs. 24,87,512, while in the past year they have fallen to Rs. 17,71,633, against Rs. 21,13,131 in 1875-76. This decline may fairly be attributed to the general reduction of personal expenditure, which has been forced upon private individuals by the unfavourable state of the exchange.

The imports under this head, nearly all of which are from the United Kingdom, fell from Rs. 3,55,785 in 1875-76 to Rs. 2,40,215 in 1876-77. In particular the imports of fire-arms and parts of fire-arms have decreased by nearly 50 per cent.

The import of coal, under which head are included coke and various kinds of patent fuel, has risen from 62,993 tons, valued at Rs. 11,77,504, in 1875-76, to 77,375 tons, worth Rs. 14,31,348, in the past year. This is probably to be accounted for by the extension of railways and the increase of steamer traffic during 1876-77.

Excluding cotton twist and yarn, the imports of which have slightly increased, the total imports of cotton manufactures show a marked decline during the year under report.

The imports of hardware and cutlery amounted to Rs. 19,44,249 in 1876-77, against Rs. 23,11,100 in 1875-76. Up to 1874 these articles were included under the head of wrought iron, and it is possible that the period during which the imports of hardware have been separately shown is too short to afford a trustworthy indication of the conditions which affect the trade.

Liquors. The following statement shows the importation of malt liquors, spirits, and wines during the last five years :—

			Ale, beer, and porter.	Spirits.	Wines and liqueurs.
			Rs.	Rs.	Rs.
1872-73	15,81,680	24,44,720	23,51,680
1873-74	15,47,680	20,53,000	21,91,650
1874-75	15,92,840	27,22,390	24,06,060
1875-76	12,57,720	20,80,840	25,50,880
1876-77	12,80,994	23,61,694	19,55,127

The fluctuations in the import of malt liquors and spirits appear to have followed much the same course. Both attained their maximum in 1874-75, and fell rapidly in the following year in consequence of the unfavourable exchange on England. During the year under report some reaction against the former reduction of consumption seems to have set in, for in both cases the import has increased. On the other hand the marked decline in the import of wines and liqueurs may probably account for some proportion of the increased consumption of spirits.

Machinery. The decrease in the import of machinery is marked, though this may be due in the case of steam-engines to the fact that up to 1876-77 engines for use on railways were included under the general head of machinery. Some portion of the decrease is also probably due to the reaction in the jute trade against the over-speculation and premature extension of mills in previous years.

Metals. Copper, which was imported in almost equal proportions from the United Kingdom and Australia, and to a less extent from Japan, has risen from Rs. 61,48,371 to Rs. 77,22,652, and the trade appears to be in a thoroughly flourishing condition. The very considerable increase which has taken place in the import of iron during the last two years is somewhat obscured by the recent classification, which shows hardware and cutlery under a separate head. If these are included for the sake of comparison, it will be seen that in 1874-75 an amount of iron valued at Rs. 55,46,798 was imported into Calcutta. In the following year the imports, including hardware and cutlery, amounted to Rs. 74,55,198, while in 1876-77 the total imports were no less than Rs. 82,76,322. There is also an increase in the imports of lead, unwrought tin, and zinc or spelter, and a heavy fall in the import of quicksilver.

Railway plant. The imports on private account of railway plant and rolling-stock during the last five years are as follow :—

			Rs.				Rs.
1872-73	26,41,201	1875-76	10,74,724
1873-74	23,87,231	1876-77	34,26,776
1874-75	16,19,695				

The increase is only apparent, and is caused by the inclusion under this head of wooden sleepers and locomotives, which were formerly shown as wooden manufactures and as machinery.

The imports of silk manufactures show a fall in value from Rs. 12,99,217 in 1875-76 to Rs. 10,29,865 in 1876-77. Very large consignments were made in the previous year, and some decline in the trade was to be expected. The bulk of the imports came from Marseilles and the United Kingdom, small supplies being also received from Hong-Kong, Italy, Port Said, and the Straits.

Woollen goods show a decrease of two lakhs, due to a heavy fall in the import of piece-goods and shawls, and a considerable rise under braids and other sorts.

The re-exports of foreign goods from Calcutta during the last five years were as follow :—

		Rs.			Rs.
1872-73	...	18,24,778	1875-76	...	10,70,062
1873-74	...	11,42,086	1876-77	...	14,93,562
1874-75	...	12,54,552			

These are consigned for the most part to the Straits Settlements, Mauritius, and Ceylon; but there is also some re-exportation to the United Kingdom. The trade has increased by nearly four lakhs in the year under report, although it has not yet reached the level it attained in 1872-73.

Export trade.—The following statement illustrates the export of the most important articles of Indian produce during the last two years :—

		1875-76.	1876-77.
		Rs.	Rs.
Opium	...	5,85,23,490	5,97,60,583
Jute, raw	...	2,80,52,933	2,63,60,880
Tea	...	2,15,00,362	2,58,07,047
Indigo	...	2,35,25,774	2,35,66,023
Rice (not in the husk)	...	1,34,67,712	1,99,88,737
Seeds, linseed	...	2,12,30,609	1,85,50,186
Hides and skins	...	1,60,30,347	1,43,14,164
Wheat	...	39,89,703	1,23,36,374
Seeds, other kinds	...	58,33,635	90,50,889
Cotton, raw	...	81,69,703	80,08,861
Silk, raw	...	41,10,868	77,48,844
Jute, manufactured	...	47,62,094	71,21,189
Sugar and sugarcandy	...	8,10,229	68,56,050
Lac of all kinds	...	75,00,574	53,62,745
Saltpetre	...	33,73,546	37,89,225
Silk manufactures	...	18,68,137	18,10,127
Oils	...	17,91,740	15,86,163
All other articles	...	99,63,172	1,10,23,165
Total exports from Calcutta	...	23,45,04,628	26,30,41,252

Dyes.

Under this head indigo is the chief export. The figures for the last five years are as follow :—

		Cwt.	Rs.
1872-73	...	85,491	2,69,94,200
1873-74	...	73,703	2,62,80,103
1874-75	...	54,428	1,98,16,099
1875-76	...	84,228	2,35,25,774
1876-77	...	69,379	2,35,66,023

The bulk of the export is taken by the United Kingdom, France, America, and Austria.

Rice. Rice not in the husk is at present the most important item under the heading grain and pulse. The exports of rice husked during the last five years were as follow :—

				Cwt.	Rs.
1872-73	5,779,058	1,68,51,709
1873-74	3,637,611	1,35,22,900
1874-75	2,724,232	1,04,85,569
1875-76	3,873,854	1,34,67,712
1876-77	5,243,704	1,99,88,737

The large increase shown in the quantity of rice exported was mainly due to the enhanced demand from Ceylon. The exportation of rice from Calcutta to Ceylon rose from 402,321 cwt. in 1875-76 to 2,167,837 cwt. in 1876-77. In ordinary years Ceylon draws its supplies of rice from the southern ports of the Madras presidency ; but the scarcity in Madras stopped all exportation during the past year, and the merchants of Ceylon were compelled to import rice from Calcutta. Large exports were also made to Mauritius, Demerara, and the West Indies to meet the demand for rice by the Indian emigrants settled there.

A still more conspicuous increase, bearing greater promise of lasting development in the future, occurred in the exports of wheat, as shown below :—

		Cwt.	Rs.			Cwt.	Rs.
1872-73	...	144,411	4,88,007	1875-76	...	1,330,822	39,89,703
1873-74	...	489,443	18,84,748	1876-77	...	3,882,218	1,23,36,374
1874-75	...	279,290	11,89,013				

It appears not unlikely that one result of the present war may be to give a permanent stimulus to the wheat trade of India.

Hides and skins. The following statement shows the course of the trade in this important staple during the last five years :—

		Raw Hides.		Tanned Hides.		Raw Skins.		Tanned Skins.	
		No.	Rs.	No.	Rs.	No.	Rs.	No.	Rs.
1872-73	...	7,003,395	1,64,60,580	7,203	18,201	2,785,100	16,94,983	1,042,686	5,22,074
1873-74	...	5,852,215	1,62,24,165	5,075	12,906	2,502,704	13,74,746	496,570	2,48,160
1874-75	...	6,510,265	1,85,31,938	8,889	23,983	3,118,031	18,09,020	237,306	1,19,404
1875-76	...	5,589,449	1,45,36,097	6,694	18,031	2,331,979	12,92,778	282,186	1,83,441
1876-77	...	4,543,826	1,21,07,416	12,346	36,988	2,207,420	15,22,649	773,560	6,47,111

In the two items of tanned hides and skins the exports show a large increase, due to the abolition of the export duty in 1875.

Jute, raw. The steady decline which has taken place in the exports of the raw jute fibre is well illustrated by the following statement :—

		Cwt.	Rs.			Cwt.	Rs.
1872-73	...	7,061,951	4,12,79,439	1875-76	...	5,206,521	2,80,52,933
1873-74	...	6,126,120	3,43,55,139	1876-77	...	4,532,148	2,63,60,880
1874-75	...	5,499,788	3,24,49,941				

During the last five years the fall both in quantity and price has been progressive, and there is some reason for believing that it may continue. The Indian jute mills now command a practical monopoly of the Asiatic, and a large portion of the American and Australian markets, and have in the past years largely extended their exports to China. This has deprived the Dundee manufacturers of some of the main outlets for their trade, and their demand for raw jute has consequently fallen. The progress of the trade in gunny-bags during the last five years has been as follows :—

YEAR.	Gunny-bags.		Gunny-cloth.		Rope and twine.		Other kinds.		Total.
	No.	Rs.	Yds.	Rs.	Cwt.	Rs.	Cwt.	Rs.	Rs.
1872-73	...	6,042,616	16,14,191	2,50,160	1,098	7,142	18,71,493
1873-74	...	6,402,363	19,03,636	34,121	1,020	8,047	19,45,804
1874-75	...	7,687,617	22,30,194	20,271	4,976	28,894	22,79,153
1875-76	...	18,091,016	43,07,640	4,647,091	4,47,492	777	8,962	47,62,094
1876-77	...	32,568,261	63,93,613	6,008,659	6,03,812	4,284	33,674	136	71,21,189

Out of the 32,568,261 bags shipped in 1876-77, 29,003,559 were power-loom bags and 3,564,702 hand-woven. The United States took 10,861,329 power-loom bags, Australia 5,682,210, Hong-Kong 5,120,973, the Straits 3,302,000, the United Kingdom 1,854,866, and Egypt 1,169,649 bags. Of the hand-loom bags 1,906,750 were sent to the United States, 1,302,000 to Australia, and 210,750 to Hong-Kong. The average price of exported bags shows a continuous fall from Rs. 29 per 100 bags in 1874-75 to Rs. 23 in 1875-76 and Rs. 19-10 in 1876-77.

A considerable increase has occurred in the quantities of shellac, button-lac and lac-dye exported from Calcutta, accompanied in the case of the two former by an appreciable decline in value. It is believed that the trade in shellac is tending to recover itself, and that a considerable portion of the surplus stock of lac-dye which is said to be on hand in the European market is really of inferior quality.

Silk is stated to show signs of recovering from the depression which affected it in 1875-76, but the trade appears to be a stagnant one, which may revive at intervals, when the yield in France and Italy fails, and when there is no effective competition on the part of China and Japan. In the long run, however, the competition of these latter countries will tend to become continually stronger, while there seems to be no prospect of such an improvement in the quality or reduction in the price of the Bengal article as will enable it to command a steady market in Europe.

The exports of sugar have risen from 83,865 cwt., valued at Rs. 8,08,669, in 1875-76, to 637,090 cwt., worth Rs. 68,52,573, in 1876-77. Most of the exports were consigned to the United Kingdom. It is believed that this extraordinary expansion of the Indian trade was mainly due to the failure of the beet-root crop in France, and the consequent stoppage of one of the chief sources which ordinarily supply Europe with sugar.

The following statement shows a steady increase in the quantity and value of tea exported from India during the last five years :—

Tea.	lb	Rs.	lb	Rs.
1872-73 ...	17,628,901	1,56,63,447	1875-76 ...	24,220,440 2,15,00,362
1873-74 ...	19,185,029	1,73,02,428	1876-77 ...	27,529,198 2,58,07,047
1874-75 ...	21,023,939	1,92,34,861		

Some reduction of value is probably to be expected in the current year.

Trade in coin and bullion.—The following statements show the imports and exports of gold and silver coin and bullion during the past five years :—

GOLD.				
Year.	Imports. Rs.	Exports. Rs.	Net imports. Rs.	
1872-73 ...	84,48,425	1,63,686	82,84,739

Interportal trade.—The imports into, and exports from, Calcutta during 1875-76 and 1876-77 are shown in one view in the following statement :—

1875-76.

IMPORTS INTO, OR EXPORTS FROM, CALCUTTA.					From or to British Indian ports.	From or to Indian ports not British.	Grand Total.
IMPORTS.					Rs.	Rs.	Rs.
Of Indian produce	1,55,60,703	5,655	1,55,66,357
Of foreign merchandise	15,60,177	9,180	15,69,357
Total Imports ...					1,71,20,879	14,835	1,71,35,714
EXPORTS.					Rs.	Rs.	Rs.
Of Indian produce	2,78,37,622	27,492	2,78,65,114
Of foreign merchandise	1,89,36,998	39,059	1,90,26,057
Total Exports ...					4,68,24,620	66,551	4,68,91,171

1876-77.

IMPORTS INTO, OR EXPORTS FROM, CALCUTTA.					From or to British Indian ports.	From or to Indian ports not British.	Grand Total.
IMPORTS.					Rs.	Rs.	Rs.
Of Indian produce	1,57,32,632	5,29,542	1,62,62,174
Of foreign merchandise	16,38,091	44,611	16,82,702
Total Imports					1,73,70,723	5,74,153	1,79,44,876
EXPORTS.							
Of Indian produce	6,47,85,275	6,97,839	6,54,83,114
Of foreign merchandise	2,31,45,590	23,288	2,31,68,878
Total Exports					8,79,30,865	7,21,127	8,86,51,992

It will be seen that the imports from Indian ports have risen from Rs. 1,71,35,714 in 1875-76 to Rs. 1,79,44,876 in 1876-77. The Bombay imports increased from Rs. 18,10,325 to Rs. 49,48,170, but this increase was counterbalanced to a great extent by a decline in the imports from Madras and British Burmah. On the other hand the increase in the exports from Rs. 4,68,91,171 to Rs. 8,86,51,992 extended to all branches of the export trade, although the exports to Madras rose in a far higher proportion than the exports to other ports of British India. In the case of Madras and the Indian ports not under the British Government the trade was abnormally stimulated by the scarcity prevailing in Southern and Western India, and the bulk of the increase in the export trade occurred under the head of grain and pulse. A large proportion of the apparent increase in the trade with Indian ports not British is due to changes in the classification of Indian ports. Two ports formerly assigned to Bombay, and three entered as belonging to Madras, are now classed as non-British.

Imports of the interportul trade.—Raw cotton is imported largely for manufacture in the local mills, but the imports during 1876-77 show a decline from Rs. 34,48,665 to Rs. 28,68,334. There has also been some change in the sources of supply. In 1875-76 most of the imports were from British Burmah, but in the past year Bombay sent Rs. 13,39,788 and Madras Rs. 6,58,087, while the Burmah imports amounted only to Rs. 8,70,459 as compared with Rs. 19,57,640 in the previous year.

The value of the imports of cotton twist and yarn rose from Rs. 2,04,713 in 1875-76 to Rs. 16,32,700 in 1876-77, while the imports of grey goods increased in the same period from Rs. 1,49,882 to Rs. 7,25,184. In the case of twist and yarn nearly the whole of the imports came from Bombay, which sent no less than Rs. 16,27,861 out of the entire amount imported.

The value of the mineral oil imported from Rangoon has risen from Rs. 6,260 in 1875-76 to Rs. 1,05,546 in the year of report. Rangoon oil has begun to compete effectively with American oil.

Under this head the imports rose from Rs. 1,04,988 in 1875-76 to Rs. 1,32,856 in 1876-77. Coconada supplied cigars to the value of Rs. 1,01,939, and Burmah Rs. 26,380. The return of the imports of cigars from foreign countries shows a continuous decline during the last three years, which is probably due in some measure to the increasing demand for the cheap cigars of Madras and Burmah. With the gradual improvements which are now being effected in the processes of manufacture, it may be expected that this demand will increase.

Exports of the interportal trade.—The scarcity in Bombay and Madras produced its natural results in an enormously increased export under the head of grain and pulse. The exports of grain rose in value from Rs. 74,395 in 1875-76 to Rs. 15,96,165 in 1876-77, the bulk of the exports being sent to Madras. Wheat increased from Rs. 9,235 to Rs. 3,02,210, and pulse from Rs. 1,59,314 to Rs. 13,02,861. In both these cases the larger proportion of the export was consigned to Madras. The following statement, taken from the Collector's report, shows the exports of rice (not in the husk) for 1875-76 and 1876-77, the last three months of the latter year being given separately as forming a period of peculiarly high pressure :—

	1875-76.		1876-77.		January, February, and March 1877.	
	Cwt.	Rs.	Cwt.	Rs.	Cwt.	Rs.
to Bombay	1,008,364	39,20,776	1,395,993	54,29,810	638,981	21,35,412
„ Madras	151,503	4,72,007	7,468,956	2,70,05,584	3,718,056	1,40,15,574

Total ...	1,160,809	43,96,926	9,024,414	3,29,83,994	4,356,611	1,65,08,342

The inaccuracy of the export statistics as hitherto recorded has formed the subject of correspondence with the Government of India, and measures have lately been adopted to ensure that re-lands and short shipments shall be duly recorded in future. The figures given above are subject to some deductions on this account. But even allowing for this, the enormous increase in the exports of grain furnishes a satisfactory proof of the readiness with which private trade may be trusted to meet a real demand, provided that it is left to conduct its operations without hindrance.

The exports of power-loom gunny-bags show a satisfactory increase, from Rs. 51,46,330 in 1875-76 to Rs. 64,05,875 in 1876-77. The chief demand was from Bombay and British Burmah. Unmanufactured tobacco also rose from Rs. 11,49,864 to Rs. 24,91,949.

Tobacco in the leaf is sent almost entirely to Burmah for manufacture into cigars. The crop is a highly profitable one to the cultivators, and it is hoped that the marked development of the exports in the past year may be due in some measure to an improvement in the quality of the leaf by more careful cultivation than has hitherto been practised.

THE PORT OF CHITTAGONG.

The gross duty collected on imports and exports at Chittagong during 1876-77 amounted to Rs. 6,81,660. Deducting the duty on salt, which realized Rs. 6,30,782, the gross duty on general merchandise amounted to Rs. 50,878, showing a decrease of Rs. 63,491 on the results of the previous year. This is undoubtedly due to the destructive cyclone and storm-wave of October 1876, which brought all commercial operations in the district to a stand-still.

Examining the returns in detail, it will be seen that the imports from foreign countries have fallen in value from Rs. 2,74,304 in 1875-76 to Rs. 2,61,989 in the year under report, being a decrease of Rs. 12,315. This decrease is accounted for by the falling off in the imports from the United Kingdom, the Straits Settlements, and the Maldives. The imports from the United Kingdom consist chiefly of salt, and it appears that the stock in hand at the close of 1875-76 was sufficient to meet the local demand. There was some increase in the trade with Ceylon, owing partly to the enhanced importation of coconuts and coconut-oil, and partly to the fact that some of the Maldivian trade passed through Ceylon and was entered as belonging to that place. This latter circumstance accounts also for some portion of the decline in the imports from the Maldives, the remainder being due to the diminished import of fruits, vegetables, shells, and cowries. The fall of Rs. 7,065, or 43 per cent., in the value of the goods imported from the Straits Settlements occurred in cabinetware, cotton piece-goods, earthenware, fireworks, pitch, tar, dammer, and sugarcandy. There was, however, an appreciable rise in the imports of pepper.

The value of the export trade of Chittagong fell from Rs. 13,30,729 in 1875-76 to Rs. 6,07,247 in 1876-77. This was the natural consequence of the damage done by the cyclone and storm-wave, which seriously injured the crops in the interior of the district and destroyed many of the native vessels lying in the port. Trade was further hampered by the outbreak of cholera which followed shortly after the cyclone and disorganized the system of rural markets by which country produce finds its way to the centres of export trade. The decline is most marked in the case of Ceylon and Mauritius. It is understood that in ordinary years Ceylon imports rice largely from the southern ports of the Madras presidency and from Chittagong. In the past year both these sources of supply were cut off, the one by the failure of crops in Madras, and the other by the cyclone. But for the cyclone, it is obvious that a large proportion of the enhanced demand from Ceylon would have been met by Chittagong; and this development might have been maintained even after Madras had recovered from the effects of the present scarcity. As it was, Ceylon was compelled to draw her supplies from Calcutta.

The value of the coasting trade of Chittagong during the last two years is shown thus :—

			1875-76.	1876-77.
<i>Imports.</i>				
			Rs.	Rs.
Madras	21,255	57,183
British Burmah	2,99,966	1,69,414
Ports within the Presidency	13,58,586	16,87,521
Indian ports, British	580
Total	<u>16,80,387</u>	<u>19,14,118</u>
<i>Exports.</i>				
Bombay	65,939
Madras	1,26,143	5,98,771
British Burmah	7,62,369	6,05,263
Ports within the Presidency	16,45,714	14,51,551
Indian ports not British	3
Total	<u>26,00,168</u>	<u>26,55,585</u>

The total imports have risen considerably in spite of a decline in the supply of earth-oil from British Burmah, which is attributed to the straitened circumstances of the inhabitants of Chittagong. The increase in the Madras exports, which is stated to arise from the large shipments of grain, appears to conflict with the remarks made in the last paragraph on the fall in the exports to Ceylon. It should be noted, however, that rice exported to Ceylon pays duty, and that the exports are consequently accurately recorded, while in the case of the free exports to Indian ports the returns are notoriously based, not on the amounts actually shipped, but on the amounts for which passes are taken out.

The exports of tea from Chittagong during the last five years are shown as follow :—

Year.			Value.	
			lb.	Rs.
1872-73	2,79,773
1873-74	3,01,177
1874-75	3,41,894
1875-76	477,703	4,79,353
1876-77	601,931	6,12,697

Chittagong tea is said to be of excellent quality, and to show some promise of becoming the most important staple of a direct trade with Europe.

THE ORISSA PORTS.

The following statement shows the value of the sea imports and exports of Orissa during the last eight years :—

YEAR.	BALASORE.			CUTTACK.			POOREE.		
	Value of imports.	Value of exports.	Total value of trade.	Value of imports.	Value of exports.	Total value of trade.	Value of imports.	Value of exports.	Total value of trade.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1869-70 ...	22,541	2,73,948	2,96,489	39,604	1,35,480	1,75,084	26,860	2,25,245	2,52,105
1870-71 ...	25,410	2,51,209	2,76,619	38,516	4,22,689	4,61,205	5,069	2,13,395	2,18,464
1871-72 ...	89,464	3,33,043	4,22,507	55,817	2,18,867	2,74,684	64,053	1,88,468	2,52,521

1875-76 ...	20,67,024	17,00,029	37,67,053	13,78,606	12,71,575	26,50,181	20,261	2,99,185	3,19,446
1876-77 ...	34,29,369	40,20,732	74,50,101	11,88,073	29,06,105	40,94,178	1,01,275	7,32,571	8,33,846

The figures in this table, representing the trade of the Orissa ports prior to 1875-76, do not include the trade between ports within the presidency.

For the whole province the values may be shown thus :—

<i>Foreign.</i>					1875-76.	1876-77.
					Rs.	Rs.
Imports ...	{ Dutiable	100
	{ Free	322	1,792
Exports ...	{ Dutiable	5,27,152	7,75,484
	{ Free	38,025	42,639
Total					5,65,499	8,20,015
<i>Coasting.</i>						
Imports ...	{ Foreign merchandise	21,83,130	22,00,967
	{ Indian produce	9,66,669	10,74,995
	{ Treasure	3,15,770	14,40,863
Exports ...	{ Foreign merchandise	12,267	5,908
	{ Indian produce	17,76,288	50,03,204
	{ Treasure	9,17,057	18,32,173
Total					61,71,181	1,15,58,110
Grand Total					67,36,680	1,23,78,125

In Pooree and Cuttack there were no imports from foreign ports of either dutiable or free merchandise, while in Balasore the only foreign imports were 10,600 gunny-bags from Ceylon, valued at Rs. 1,792. A small quantity of claret was imported into Cuttack from Pondicherry.

Among the exports from Cuttack to foreign ports the chief were rice, wheat, and oilseeds. The trade in oilseeds is stated to have declined of late, partly in consequence of the greater attention bestowed on the export of rice, and partly because the firm which used to send sesamum to France have now left the district. The exports of rice rose from 91,196 cwt., valued at Rs. 2,59,661, in 1875-76, to 177,189 cwt., valued at Rs. 5,12,110, in 1876-77. Mauritius, Arabia, and Ceylon, take the bulk of the Cuttack export. The foreign exports from Pooree show a decline, and the increase in Balasore is due to the large consignments of rice to Mauritius, Ceylon, and Maldives.

Turning to the coasting trade of the Orissa ports, it will be found that the imports into Cuttack, excluding treasure, have fallen by about three lakhs in consequence of the diminished import of cotton piece-goods. If treasure be included, the decline amounts to a little more than two lakhs. At Pooree the imports have risen enormously owing to gunny-bags received from Bombay and treasure from the Madras ports. At Balasore the increase, though less marked than at Pooree, was considerable. It occurred chiefly in treasure brought to pay for the purchases of rice from the cultivators, and also in cotton twist, metals, and gunny-bags.

In all of the Orissa ports the rise in exports to Indian ports was enormous, occurring chiefly in rice, the export of which is shown as follows :—

		Quantity.		Value.	
		1875-76.	1876-77.	1875-76.	1876-77.
		Cwt.	Cwt.	Rs.	Rs.
Cuttack	{ Rice in the husk ...	5,734	4,372	5,670	7,189
	{ Rice not in the husk ...	132,783	541,765	3,53,312	16,06,830
	Total ...	138,517	546,137	3,58,982	16,14,019
Pooree	{ Rice in the husk ...	66	3,080	60	5,888
	{ Rice not in the husk ...	138,563	225,664	2,97,017	7,04,187
	Total ...	138,629	228,744	2,97,997	7,10,075
Balasore	{ Rice in the husk ...	196,910	73,017	2,12,017	72,498
	{ Rice not in the husk ...	394,920	1,038,099	8,68,348	25,80,480
	Total ...	591,830	1,111,116	10,80,365	26,52,978

The accuracy of these figures is open to some doubt, but they prove that the resources of Orissa have been made available to relieve the famine tract at the time of its extreme need. It is hoped that a permanent development of the Orissa trade may result from the operations of the past year.

In the last Administration Report a hope was expressed that in the following year it would be found possible to furnish full information on the internal trade of Bengal under the system of registration established in 1875. A report for the year 1876-77, based upon the returns of that registration, has been prepared by Mr. Cotton, Junior Secretary to the Government of Bengal. This report deals with—

Internal trade.

- (i) the internal trade of Bengal;
- (ii) the interprovincial trade, i.e. the trade between Bengal and the other provinces in British India, namely, Assam, North-Western Provinces, Central Provinces, and Madras; and
- (iii) the frontier trade, i.e. the trade between Bengal and the provinces beyond British India, such as Nepal, Sikkim, and Bhutan.

The principal object kept in view in the preparation of the trade returns and report was to make them subservient to, and illustrative of, the statistics of the sea-borne trade of Calcutta. Incidentally much information, though not by any means of a complete character, has been got together with reference to the trade of the districts and principal marts of the interior. In the following paragraphs a review is given of the registered trade in the chief staples, supplemented by a brief notice of the interprovincial and foreign land trade of the province.

The quantity and value of the most important staples of trade in Bengal. The quantity and value of the most important staples of traffic are shown in the following statement:—

Ditto, unrefined	22,78,900	5,62,700	1,19,300	29,60,800	1,18,43,000

LIST OF ARTICLES.	By country boats.	By river steamers.	By rail.	By road.	TOTAL.	
					Quantity.	Value.
	Mds.	Mds.	Mds.	Mds.	Mds.	Rs.
Tobacco	17,24,100	22,300	2,80,900	1,13,000	21,40,300	1,07,01,000
Raw cotton	4,22,000	4,80,200	21,700	9,23,900	1,38,59,000
	No.	No.	No.	No.	No.	
Hides	1,421,200	12,300	3,502,700	119,900	5,056,100	1,01,12,000
	Mds.	Mds.	Mds.	Mds.	Mds.	
Saltpetre	3,37,000	5,18,400	19,300	8,74,700	52,48,000
	Rs.	Rs.	Rs.	Rs.	Rs.	
European piece-goods ...	1,20,82,100	56,77,200	9,38,75,600	30,17,600	11,46,53,000
	Mds.	Mds.	Mds.	Mds.	Mds.	
Cotton twist (European)	62,100	2,900	97,800	7,500	1,70,300	1,19,21,000
Salt	66,33,000	1,08,400	23,84,700	3,04,600	94,30,700	4,71,53,000

A special account of the trade in each of these items is furnished according to the order above given. All the staples, with the exception of salt and cotton piece-goods, are imported towards Calcutta. Salt and English piece-goods are exported from Calcutta, and so distributed in the interior of the country.

The total quantities of rice and paddy, as registered under the present system of registration, amount to 2,49,95,800 maunds and 68,10,500 maunds respectively. The sea-borne exports from Orissa and Chittagong are 31,37,400 maunds of rice and 1,09,400 maunds of paddy. Altogether 2,81,33,200 maunds of rice and 69,19,900 maunds of paddy have been brought under registration. Converting paddy into rice at the proportion of one maund of paddy to 25 seers of rice, the gross total amounts to 3,24,58,200 maunds of rice. 74,97,100 maunds of this quantity represent the provincial local trade, in some cases moving from one district to another, and in others moving within the same district; and this amount must therefore be struck off from the total, leaving a net balance of 2,49,61,100 maunds as the surplus rice produce for export.

The following statement shows in a compendious form the net exports of rice and paddy (taken together) from Bengal and the other provinces which have come under registration during the past year :—

	Gross export (in rice).	Gross import (in rice).	Net export (in rice).
	Mds.	Mds.	Mds.
Bengal	2,29,22,600	24,68,100	2,04,54,500
Orissa	32,97,700	3,38,700	29,59,000
Behar	8,70,700	2,74,100	5,96,600
Nepal	4,63,200	22,400	4,40,800
Sylhet	4,85,500	91,500	3,94,000
Oudh	66,700	700	66,000
Chota Nagpore	50,200	50,200
Total	2,81,56,600	31,95,500	2,49,61,100

In this statement "gross export" includes the local trade within a district, as well as the traffic from one district to another; "gross import" includes local trade as well as supplies from places beyond the district itself; and "net export" is the difference between the gross import and the gross export, and represents the net surplus stock available for consumption in Upper India, and for export by sea to the neighbouring presidencies and to foreign ports.

Nearly 250 lakhs are shown above as surplus produce. Of this amount 26 lakhs are exported from Orissa and 7 lakhs from Chittagong, all by sea; more than 184 lakhs are sent to Calcutta, and the remainder is consumed in the various importing districts.

The following statement shows all the net exporting districts and the total quantities of rice exported from them:—

Exporting Districts of Bengal.

Oudh	...	66,700	700	66,000
Total	...	10,15,400	1,14,600	9,00,800

As far as the Orissa districts are concerned, the whole of the exports are given in the above statement. The destination of the bulk of these exports was beyond the Bengal Province, 21,35,000 maunds going to Madras and Bombay, and 8,24,200 maunds to other places, including 3,95,600 maunds to Calcutta. Of these exports 4,16,600 maunds were sent into Madras by land, all the rest going by sea. Of the surplus exports 32,35,900 maunds were consumed in the districts shown in the following statement:—

Importing Districts of Bengal.

Name of District.			Gross import.	Gross export.	Net import.
			Mds.	Mds.	Mds.
Dacca	18,62,100	11,82,200	6,79,900
Sarun	5,98,200	56,400	5,41,800
Mozufferpore	3,83,300	15,800	3,67,500
Nuddea	7,95,300	4,75,600	3,19,700
Patna	5,54,700	3,22,400	2,32,300
Chittagong	8,39,800	7,25,100	1,14,700
Durbhunga	1,25,800	4,000	1,21,800
Furreedpore	11,27,200	10,32,700	94,500
Chumparun	85,600	13,300	72,300
Shahabad	58,000	7,100	50,900
Other districts	11,900	5,100	7,400
Total			64,41,900	38,39,700	26,02,800

Other Provinces.

Name of District.			Gross import (in rice).	Gross export (in rice).	Net import (in rice).
			Mds.	Mds.	Mds.
Districts of Assam other than					
Sylhet	4,48,900	6,900	4,42,000
North-Western Provinces	6,46,100	4,55,000	1,01,100
Total			10,95,000	4,61,900	6,33,100

In the case of Chittagong the "net import" shown represents the net quantity which remained within the district after deducting the exports by sea to foreign ports and elsewhere.

It remains only to specify the trade of Calcutta, which amounts to 1,84,65,400 maunds imported by internal traffic routes, and to 1,88,04,700 maunds exported by sea.

The rice trade with Calcutta is larger than the whole of the rest of the trade of the province put together. The trade during 1876-77 was extraordinarily active, and the sea-borne exports of the port are more than double those of previous

years: they amount to more than 188 lakhs of maunds. In 1875-76 the exports were 58 lakhs; in 1874-75 (famine year) 40 lakhs only; in 1873-74, 74 lakhs; and in 1872-73, 103 lakhs. The stimulus to the trade was supplied by the famines in Madras and Bombay. Madras alone imported 85 lakhs of maunds of rice during the year, and Bombay 32 lakhs.

It is not easy to calculate the actual consumption of rice within Calcutta itself. The population of the metropolis consists of nearly 900,000 inhabitants: thus—

Calcutta proper	429,535
The Suburban Municipality	257,149
The further suburbs known as the North and South Suburban					
Towns	89,895
Howrah	97,784
Total					874,363

But in addition to this, it must be recollected that there are other practically outlying suburbs, and it will not be safe, therefore, to estimate the total metropolitan population at less than 900,000 inhabitants. Assuming that this is the total number of souls who are dependent for their support on the import of food-grains into the city and its environs, and allowing a daily consumption per head of half a seer of rice, or a little more than $4\frac{1}{2}$ maunds annually, the total annual consumption of Calcutta will be 41 lakhs of maunds.

It is probable that half a seer per day is ample to allow for the Calcutta consumption. In the rice districts of the interior it is customary to allow as much as three-quarters of a seer per day, but this is the allowance for a labouring and agricultural population; and in Calcutta many other food-grains, as well as flesh and fish, go to make up the food-supply of the population. It is not improbable that half a seer of rice per day in Calcutta is an excessive estimate.

The recorded exports from Calcutta by sea during the year amounting to 188 lakhs of maunds, and the local consumption being 41 lakhs, it is evident that the total supply of rice imported into the metropolis ought, in order to meet this demand, to amount to as much as 229 lakhs.

The registered imports of rice are, however, very much less than this, being only 1,79,39,354 maunds. But to this amount must be added 8,41,700* maunds of paddy, which at 25 seers of rice for a maund of paddy will amount to 5,26,100 maunds of rice. The total registered importation into Calcutta is therefore 1,84,65,400 maunds of rice.

The discrepancy between these figures and the figures assumed above to represent the local demand plus sea export may be accounted for by the facts that the land registration is not yet complete; that the figures of sea export to free ports are notoriously in excess of the truth; and that large stocks are kept in Calcutta ordinarily which in a year of heavy export supply deficiencies in importation from the interior.

The total imports of the twenty million maunds of rice which were imported into Calcutta during 1876-77 may be summed up as follows:—

			Mds.
From the Soonderbun districts	68,50,000
„ Western Bengal	57,00,000
„ Central Bengal	18,00,000
„ Northern Bengal	11,00,000
„ Eastern Bengal	23,00,000
„ Behar and Upper Provinces	7,00,000
„ Orissa	4,00,000
„ Assam	1,00,000
Imports unregistered	17,50,000
Total			2,02,00,000

It is impossible to reproduce here all the detailed information given in Mr. Cotton's report with reference to the rice trade of the various districts of Bengal. The following particulars of the trade of Behar, Orissa, and provinces outside Bengal are, however, of interest.

The importation of rice into Behar is large; and rice is a principal food-crop in Behar, though among the poorer classes, and especially in the district of Sarun, maize and barley are in a great degree the food of the people. It may be roughly stated that in Behar ordinary cultivators eat their meals half rice and the other half in cereals, millets, or pulses.

The following statement illustrates the rice trade for the Behar province:—

<i>Import.</i>			
	Rice.	Paddy.	Total (in rice).
	Mds.	Mds.	Mds.
Deduct local trade of the province ...	16,39,400	7,04,700	20,79,700
Net Total ...	5,12,800	60,700	5,50,700
	11,26,600	6,44,000	15,29,000
<i>Export.</i>			
	Rice.	Paddy.	Total (in rice).
	Mds.	Mds.	Mds.
Deduct local trade of the province ...	12,44,200	72,800	12,89,700
Net Total ...	5,12,800	60,700	5,50,700
	7,31,400	12,100	7,39,000

The net importation is therefore 7,90,000 maunds of rice.

The registration of the river-borne traffic shows 13,32,300 maunds of rice and 3,79,600 maunds of paddy imported into Behar.

The net river-borne exports from Behar are small, and are sent mostly to Calcutta.

Besides this trade there is also a considerable rice traffic registered within Behar itself. The local movements of food-grain within the province are indeed very large, but for the most part they are

made overland from the low-lying rice lands of the north and north-east to the populous districts of Sarun and South Tirhoot. All this movement of rice is necessarily unregistered.

The rice traffic between Nepal and Behar is by road. The net results show a large import, as follows:—

Imports from Nepal into—

				Rice. Mds.	Paddy. Mds.
Mozufferpore	1,45,600	50,700
Chumparun	19,000	1,04,900
Sarun	47,700	7,400
Purneah	19,200	62,200
Durbhunga	14,500	69,100
Bhagulpore	7,700	29,500
Monghyr	7,000
Patna	100
Total	2,60,800	3,23,800

Exports into Nepal from—

				Rice. Mds.	Paddy. Mds.
Bhagulpore	8,000	3,400
Mozufferpore	3,800	4,000
Purneah	2,900	2,900
Chumparun	500	700
Durbhun	200	100
Monghyrga	100
Total	15,500	11,100

	Rice. Mds.
Sonthal Pergunnahs	2,464,00
Bhagulpore	1,53,000
Patna	83,000
Monghyr	60,100
Shahabad	3,300
Purneah	3,200
Total	5,49,000

The surplus importation is 2,45,300 maunds of rice and 3,12,700 maunds of paddy.

The railway figures of the rice trade are not complete, but they show all the exports of rice to Calcutta. The statement in the margin shows all the railway exports of rice from Behar to Calcutta during the year.

Orissa has always been a large rice-exporting country, and

Rice trade of Orissa.

now that its facilities of communication have been increased its exports are very considerable. The demand from Madras upon Orissa during the past year was excessive, and the exports far exceed that of any previous year. The following statement shows all the registered exports from Balasore, Cuttack, and Pooree during the year 1876-77:—

WHITHER EXPORTED.	Balasore.	Cuttack.	Pooree.	Total.
	Mds.	Mds.	Mds.	Mds.
To foreign countries	97,187	2,41,173	44,343	3,82,703
To British Indian ports beyond the Bengal presidency (mostly Madras) and into Madras by land	9,73,856	5,01,779	6,63,041	21,38,676
To Calcutta and elsewhere within the Bengal presidency	4,36,720	843	4,37,563
Total	15,07,763	7,43,795	7,07,384	29,58,942

The export of rice from Orissa into Madras by land, and registered at the frontier station of Rumbha, is 4,16,600 maunds, almost the whole of which was the produce of the Pooree district. The sea-borne exports are principally from Chandballee, Moureegong, and False Point.

The registration returns shows a net importation of rice into the districts of the North-Western Provinces. Ghazipore imports the largest quantity, the total being something over three lakhs of maunds, from the Bengal rice districts bordering on Behar. Oudh is a surplus producing tract, its net exports during the year amounting to over 60,000 maunds, almost entirely to Behar.

The following abstract statement shows the import and export traffic of the Upper Provinces in a compact form:—

<i>Imports.</i>					
			Rice.	Paddy.	Total.
			Mds.	Mds.	(in rice). Mds.
By boat	6,26,000	33,100	6,46,700
„ rail		Not registered.	
Total			6,26,000	33,100	6,46,700
Deduct local trade of the provinces			1,64,000	17,000	1,74,600
Net imports			4,62,000	16,000	4,72,100
<i>Exports.</i>					
			Rice.	Paddy.	Total
			Mds.	Mds.	(in rice). Mds.
By boat	4,01,200	1,80,100	5,13,800
„ rail	8,600	8,600
Total			4,09,800	1,80,100	5,22,400
Deduct local trade of the provinces			1,64,000	17,100	1,74,600
Net exports			2,45,800	1,63,000	3,47,800

The total registered exports are thus 5,22,400 maunds. Of this total 1,74,600 maunds are an export from one part of the province to another. There remains 3,47,800 maunds exported into Bengal and Behar. The quantity exported to Bengal is only 12,900 maunds. The exports sent to Behar are destined mostly for Sarun and Patna. The principal exporting districts are Goruckpore and Bustee.

The total registered imports into the North-Western Provinces are 6,46,700 maunds. The total imports from Behar and Lower Bengal are 4,72,100 maunds. Deducting exports from imports, the net importation by river boats into the North-Western Provinces and Oudh from the Lower Provinces is 1,24,300 maunds. The principal importing districts are Ghazipore and Benares.

The province of Assam proper does not usually export or import rice largely, but the tendency is to import.

The registered rice traffic between Bengal and Assam for 1876-77 is shown in the returns as follows:—

Export from Bengal to Assam.

		Rice.	Paddy.	Total. (in rice).
		Mds.	Mds.	Mds.
By boat	...	3,10,800	24,800	3,26,300
„ steamer	...	2,12,700	2,12,700
Total	...	5,23,500	24,800	5,39,000

Import into Bengal from Assam.

		Rice.	Paddy.	Total. (in rice).
		Mds.	Mds.	Mds.
By boat	...	2,15,500	4,39,100	4,89,900
„ steamer
Total	...	2,15,500	4,39,100	4,89,900

The principal exporting marts are all in Sylhet.

The total of the Sylhet exports is 4,85,500 maunds in husked rice. If the trade of Sylhet is excluded from the province, the total registered imports into Assam amount to 4,47,500 maunds, the exports to only 4,400 maunds.

In conclusion, it may be convenient to summarize briefly the generalizations arrived at. The principal directions and quantities of the traffic of rice in Bengal during the year 1876-77 were as follow:—

		Mds.
Exported supply from Bengal, Orissa, and all other places into Calcutta for export by sea	...	1,88,00,000
Exported supply from Bengal into Calcutta for consumption in the metropolis and its environs	...	41,00,000
Exported supply from all sources into Behar and the North-Western Provinces for consumption (Behar* 14 lakhs and North-Western Provinces† 1½ lakhs of maunds)	...	15,25,000
Exports from Chittagong by sea	...	7,00,000
Ditto Orissa by sea elsewhere than into Calcutta	...	21,00,000
Ditto Orissa into Madras by land	...	4,00,000
Ditto Bengal into Assam	...	5,00,000
Grand Total	...	2,81,25,000

		Behar.	Mds.
* By river	13,50,000
„ road from Nepal	4,00,000
Deduct imports from North-Western Provinces	17,50,000
			3,50,000
			14,00,000

** North-Western Provinces.*

† By river	4,75,000
Deduct exports into Behar	3,50,000
			1,25,000

Or, in other words, out of the surplus produce of the rice districts of Bengal nearly twenty-three million maunds were exported out of the Bengal provinces :—

				Mds.
From Calcutta by sea	1,88,00,000
„ Chittagong by sea	7,00,000
„ Orissa by sea	21,00,000
Into the North-Western Provinces inland	1,25,000
„ Madras inland	4,00,000
„ Assam inland	5,00,000
Total				<u>2,26,25,000</u>

And more than five millions of maunds were consumed by the importing tracts within the provinces :—

				Mds.
By Calcutta	41,00,000
„ Behar	14,00,000
Total				<u>55,00,000</u>

The total of rice exported from the Bengal provinces is therefore	2,26,25,000
The total of imported rice consumed in Calcutta and Behar is	55,00,000
Grand Total				<u>2,81,25,000</u>

The cultivation of wheat is inconsiderable in Bengal proper. Although the traffic is large, the bulk of the wheat comes, not from Bengal, but from the North-Western Provinces and Behar; and although the facts are registered in Calcutta, the consequences affect Northern India generally, and not Bengal particularly. Cawnpore is the principal exporting place, and it sends entirely by rail to Calcutta; the distance is 684 miles, and the present railway freight is Rs. 18-14-5 per ton carried. In the Behar province, however, wheat is also an important food staple, and there is a large surplus production. One of the most remarkable phenomena in the export trade of Northern India is the increase now observable in the wheat supply and the growth of the area under cultivation in the exporting districts.

The following statement of the export of wheat from Calcutta to foreign ports during the past five official years shows this most clearly :—

Official year.			Cwt.	Equivalent in Mds.
1872-73	144,411	1,96,560
1873-74	489,443	6,66,186
1874-75	279,280	3,80,132
1875-76	1,330,822	18,11,398
1876-77	3,871,114	52,85,635

Thus the increase is striking. During the past year, 1876-77, the total exports from Calcutta by sea to foreign and Indian ports have amounted to 54,02,239 maunds. Out of this quantity 44,82,846 maunds were sent to Great Britain. The total exports of wheat from British India to Great Britain during the year 1876-77 amount to 59,03,436 maunds. So that it will be seen Calcutta takes far the largest share of this trade. British India now comes third among the countries of the world that supply Great Britain with wheat. The last published accounts of the trade and navigation of the United Kingdom show the imports of wheat into Great Britain during the three past calendar years as follows:—

	1874. Cwt.	1875. Cwt.	1876. Cwt.
United States	23,048,552	23,463,910	19,229,785
Russia	5,714,488	9,995,295	8,769,260
British India	1,076,876	1,334,943	3,279,887
British North America ...	3,807,174	3,604,610	2,417,151
Germany	3,053,680	5,615,984	2,324,148
Egypt	293,880	2,093,853	2,218,227
Turkey and Wallachia and Moldavia	659,676	1,308,137	1,238,851
Chili	1,925,334	900,880	982,619
France	300,299	1,296,920	293,350
Denmark	167,286	493,599	262,518
Other countries	1,432,215	1,678,262	3,308,356
Total ...	41,479,460	51,786,393	44,394,152

All these figures show remarkably the expansion of the Indian wheat trade as compared with the trade of most exporting countries, and suggest the possibility of further increase.

The grand total of the internal trade in wheat registered in Bengal during 1876-77 is as follows:—

	Grand total of the traffic registered. Mds.
By boat	27,33,000
„ steamer	10,300
„ rail	48,22,500
„ road	20,900
Total ...	75,86,700

Almost the whole of the wheat consignments are sent to Calcutta for export to Europe. The registered imports into Calcutta amount roundly to 64½ lakhs of maunds, or 4,800,000 cwt.; the exports amount to 54½ lakhs, or 4,000,000 cwt. The difference, amounting to 10½ lakhs of maunds, is the quantity that was locally consumed in Calcutta during the year.

Besides Calcutta the only important wheat-importing marts are Patna and Revelgungé. Patna imported 4 lakhs of maunds and Revelgungé 2½ lakhs of maunds, derived in both cases mostly from Oudh and the district of Goruckpore. The whole of the Revelgungé imported supply, as well as 50,000 maunds, the produce of the Sarun

district itself, was re-exported to Calcutta. The Patna imports were almost all re-exported to Calcutta. The railway imports into Patna are not registered, but they were certainly inconsiderable; and the supply for local consumption within the city itself was mostly derived from the neighbouring villages of the Patna district, and is of course unregistered.

Pulses or *dāl* are a most important food staple throughout the whole of Bengal and Behar. The principle pulses are known as *muttur*, *khesari*, *mashuri*, *maskolai*, *moog*, *boot* or *chhola*, and *arhur*. All these except the last are sown after the subsidence of the rains and reaped in the cold weather, and are extensively cultivated. *Muttur*, or peas, in particular is in great demand, and its *dāl* is much relished by the people. The well-known *arhur* is sown with the early rice, usually in the same field, and is cut in January. It will grow almost on any soil; the wood is sold as fuel. The trade in pulses and gram is chiefly towards Calcutta, but there is also a large interdistrict traffic.

The total of gram and pulse registered during the year 1876-77 is as follows:—

					Total traffic. Mds.
By boat	42,72,400
„ steamer	65,000
„ rail	11,24,700
„ road	2,65,100
Grand Total					57,27,200

The Calcutta supplies come from many districts and many marts. Out of 36 lakhs of maunds imported into Calcutta as much as 18½ lakhs of maunds were exported from Calcutta by sea, 2½ lakhs of maunds were re-exported inland by boat, and 15 lakhs of maunds remained for consumption in the metropolis.

The principal supplying district is Nuldea, which contributed over 10 lakhs of maunds of pulses, valued at 17½ lakhs of rupees. The next largest supplying district is Patna, which contributed over 6½ lakhs of maunds, and then Monghyr, with 4 lakhs of maunds. The largest exporting mart is Patna city, which exported over 4 lakhs of maunds; and the supply from the railway stations of Bureah, in Monghyr, and Cawnpore is over a lakh of maunds in each case.

Under this heading are comprised barley, kodo, cheena, shama, Indian corn, oats, millets, and other crops which are reaped during the spring and rainy seasons and form an important part of the food-supply of the Behar people. The principal rainy weather crop is maize or Indian corn; almost all the other crops are reaped in the spring months. Of the registered total of these crops for the year 1876-77 Goruckpore supplied 5,22,400 maunds, Fyzabad 1,82,300 maunds, Patna 1,51,000 maunds, Gonda 1,45,300 maunds, Sarun 1,41,500 maunds, and Baraich 1,34,000 maunds. Nearly the whole of these supplies were consigned to Behar; Sarun, Patna, Durbhunga, and Mozufferpore being the chief importing districts.

The following statement illustrates the grand total of the traffic registered during 1876-77:—

		Miscellaneous spring crops.	Miscellaneous rain crops.	Other food- grains.	Grand total of traffic registered.
		Mds.	Mds.	Mds.	Mds.
By boat	...	13,37,100	5,05,900	18,43,000
„ road	...	1,29,100	1,84,900	3,14,000
„ rail	...	Particulars not available.		1,07,300	1,07,300
Total	...	14,66,200	6,90,800	1,07,300	22,64,300

The district of Sarun derived its large supplies, amounting to 7,25,700 maunds, mostly from Goruckpore (3,01,500 maunds), Fyzabad (1,72,600 maunds), and Baraich (1,16,000 maunds). After Sarun the imports are largest into Calcutta,* which obtained its supplies from Bhagulpore (59,800 maunds), Patna (51,900 maunds), Shahabad (43,300 maunds), Hooghly (35,800 maunds), Nuddea (21,100 maunds), and Pubna (19,200 maunds). The re-exportation from Calcutta by sea amounted during the year under review to 2,02,800 maunds, leaving a surplus importation of 1,48,300 maunds for consumption in the metropolis.

From an early period jute has been cultivated in Bengal and manufactured into gunny-bags for the packing of articles exported from the country. But it is only of recent years that the cultivation has been large, and the export of the raw material from India is of very modern date. In the period of five years from 1828 to 1833 the average annual exportation of jute from Calcutta was only 11,800 cwt.; from 1838 to 1843 the average was 117,047 cwt.; from 1848 to 1853 the average was 439,350 cwt.; from 1858 to 1863 the average was 969,724 cwt. It is after this period that the export has enormously increased. During the five past years the export of raw jute from Calcutta has been as follows:—

Year.		Cwt.	Equivalent in Mds.	Rs.
1872-73	...	7,061,951	1,16,12,084	4,12,79,439
1873-74	...	6,126,120	83,38,329	3,43,55,139
1874-75	...	5,499,788	74,85,822	3,24,49,941
1875-76	...	5,206,521	70,86,653	2,80,52,933
1876-77	...	4,574,097	62,25,852	2,66,48,844

The exports reached their height in 1872-73. The total figures have since that year shown a progressive decrease, which is attributable to the increased consumption of jute in this country. Although less raw jute is exported, a larger quantity goes away every year in the manufactured state of bags and cloth. The amount of jute consumed in the Calcutta jute mills during the past year is estimated at 22 lakhs of maunds.

During the year under review, moreover, the crop of jute in Bengal was scanty, and the available supply, whether for consumption or export, was insufficient to meet the demand of those engaged in the trade. The consignments to Calcutta from Serajunge and the

other large marts fell off in a marked degree towards the close of the season, and the price of jute advanced to a corresponding extent. The jute mills in Calcutta were fully employed in manufacturing bags to meet the extraordinary local demand created by the famine, and the quantity let go for export was for this reason also less than it would otherwise have been. There were thus several causes at work to account for the reduced export to Europe, which was less than the export of any year since 1870-71.

It has already been said that the destination of jute exported is Calcutta; but in the interior of Bengal there are several large depôts or emporia of trade, which collect the jute from neighbouring districts and then re-consign it to Calcutta. The principal of these large marts are Serajgunge, Naraingunge, Goalundo, and Kooshtea.

The following statement shows the importation of jute into Calcutta during the year ending 1876-77 and the exports by sea. The totals are given according to the several means of conveyance adopted, whether by country boats, river steamers, railway, or road:—

		Mds.	
Imports into Calcutta	By boat	...	38,39,404
	„ road	...	2,24,274
	„ Eastern Bengal Railway	...	33,82,406
	„ river steamers	...	8,57,829
Total		...	83,03,913
Exports from Calcutta	By sea	...	62,25,852

It will be seen that while the total imports into Calcutta during the year amounted to 83 lakhs of maunds, the total exports are 62 lakhs of maunds, leaving a difference of 21 lakhs of maunds for local consumption in Calcutta and its neighbourhood.

The chief jute producing districts of Bengal are in North-Eastern and Eastern Bengal. In order to ascertain the net exports of the several districts, it is necessary to deduct the re-exports from those districts which contain any of the larger centres of the traffic, and are therefore importing as well as exporting districts. The following statement has accordingly been prepared to show the gross and net exports:—

Exporting District.	Gross export. quantity.	Net export quantity.
	Mds.	Mds.
Mymensing	19,22,600	19,15,000
Dacca	24,75,200	11,77,100
Rungpore	11,55,200	11,54,400
Pubna	28,77,800	10,81,700
Tipperah	5,54,400	5,53,700
Rajshahye	4,02,300	4,02,300
Furzedpore	20,73,600	3,85,200
Purneah	2,67,200	2,67,100
Bogra	2,66,900	2,66,900
24-Pergunnahs	2,74,400	2,64,700
Dinagepore	2,40,500	2,40,500
Cooch Behar	1,66,200	1,66,200

Exporting District.			Gross export. Quantity.	Net export. Quantity.
			Mds.	Mds.
Nuddea	2,35,300	1,32,300
Goalparah	1,11,900	1,11,900
Maldah	74,000	74,000
Julpigoree	67,900	67,900
Backergunge	52,500	52,500
Jessore	50,100	48,100
Sylhet	27,000	27,000
Burdwan	23,200	22,000
Moorsheadabad	22,100	19,100

A few remarks are added to illustrate the movements of jute sacking, or gunny-bags, as far as the trade in the interior of Bengal is concerned. The weaving of gunny is still an important occupation of the people, especially as regards the Northern Bengal districts.

First, as regards hand-made bags. The total registered import from the interior of Bengal into Calcutta and its suburbs is 17,504,500 bags.

The following statement shows the principal supplying districts:—

Dinagapore	...	3,550,640
Pubna	...	3,173,740
Julpigoree	...	764,811
Moorshedabad	...	410,655

The bulk of the supplies from Bengal are of course sent to Calcutta.

The other principal importing districts are Hooghly (comprising the mart of Bhuddressur), which imported 886,000 bags, of which 885,800 bags came from Purneah; then come Goruckpore, which imported 449,400, and Sarun, 310,275 bags, mostly from Patna. Nuddea imported 290, mostly from Purneah. Moorshedabad imported 230,028, and Ghazipore 209,850 bags, in both cases mostly from Maldah.

Power-loom bags made in the jute mills are exported into the interior from Calcutta, nearly a crore in number, by the East Indian Railway. The principal railway-stations to which these supplies are sent are Cawnpore (2,600,000), Patna (1,500,000), Delhi (700,000), Jubbulpore (500,000), stations in Burdwan and Beerbhoom (1,200,000), and Mirzapore, Umritsur, Mooltan, and Ludhiana, all above three lakhs of bags in number. No power-loom bags are sent to Eastern Bengal, where the demand is sufficiently met by the local gunny-weavers.

The export of gunny-bags by sea from Calcutta during the year is 64,662,900 power-loom bags and 8,306,700 hand-loom bags: total 72,969,600 bags. The exports by boat and rail are something under ten million bags. The grand total exported is therefore 82,000,000 bags. On the other hand the local manufacture is from 80,000,000 to 88,000,000 bags, and the hand-made imports are a crore and three quarters. A large margin thus remains for local consumption in Calcutta.

There is also a considerable trade in the interior in gunny cloth, or large sheets of sacking not yet made up into bags. Calcutta imported 226,100 pieces of hand-made gunny cloth during the year, derived from Culna in Burdwan (186,831 pieces), and the remainder from Dinagapore. A piece contains twenty yards. The exports from Calcutta by sea are 7,100,000 yards of power-loom cloth, and only 10,900 yards of hand-loom manufacture.

Oil-seeds are very largely grown over the whole of Bengal, and are poured from all parts of the country into Calcutta.

The largest cultivation is along the banks of the Ganges, and especially in the districts of the Patna and Bhagulpore Divisions, and in West Assam. The principal oil-seeds in the country are *teeseee* or *mushina* (linseed) and *sarsoo* (mustard or rape). All sorts of oil-seeds are cold-weather crops—that is to say, they are sown in October and November and reaped at the close of the winter season, in March. Teel-seed, poppy-seed, and other oil-seeds, are exported, but the quantities are insignificant.

The export trade in oil seeds from Calcutta has now for the most part recovered from the depression under which it has laboured for some years. The exports for the past seven years are as follow :—

Years.				Linseed.	Mustard and rape-seed.
				Mds.	Mds.
1870-71	44,55,412	28,38,581
1871-72	38,20,238	15,39,847
1872-73	29,32,480	36,826
1873-74	31,27,643	1,36,803
1874-75	38,03,703	5,98,108
1875-76	56,04,994	12,33,066
1876-77	47,96,000	14,94,600

Linseed is exported to a far greater extent than any other oil-seed. The value of the exports now exceed a million and a half sterling. In 1840 the value was about two lakhs of rupees ; in 1851 it was a quarter of a million sterling ; in 1862 it was three-quarters of a million ; and in 1864-65 it exceeded a million. The trade then slightly declined ; but in 1870-71, when the American crop was injuriously affected by rain, it reached its highest point, at that time, of one and three-fifths millions. The main consuming countries are North America and the United Kingdom, and Calcutta has a strong competitor in Russia in exporting to both of these countries.

The figures of the export of mustard or rape-seed show most extraordinary fluctuations year by year. It is but a chance coincidence that in the same year in which the brisk trade with America occurred in linseed an unusual demand for rape-seed was made from France and the United Kingdom. The Franco-Prussian war interfered with the supply of German seed, which usually supplies the English market ; and as large stocks happened to be available in India, the bulk of the trade was suddenly transferred to this country. The demand, however, became so great that the ordinary precautions in the selection and shipment of the seed were neglected, and in many cases the consignments arrived damp and worthless. Heavy losses ensued, and the trade fell off. During the past year or two, however, a healthier state of things has prevailed in the market, and the trade in the year under review shows a marked improvement, which has still further manifested itself during the current year.

Oil-seeds have been free of duty since August 1875 ; and it is to the removal of the duties, coinciding with a very favourable outturn of crop, a depressed exchange, and disturbances on the continent of Europe, that the increase in the export must be attributed.

Linseed or *mushina*, as it is called in Bengal, or *teesee* and *ulsee*, as it is called in the North-Western Provinces and Behar, is the common flax, but it is never grown in this country for fibre, but only for the seed for making oil. The damper districts of Bengal are not well suited to this plant, but throughout all Behar it is extensively cultivated for its oil, and the exports are enormous.

The total quantity of linseed registered during the year 1876-77 is as follows :—

	Mds.
By boat	41,11,600
„ steamer	29,00
„ rail	24,02,700
„ road	2,92,600
Total	<u>68,09,800</u>

The imports into Calcutta, amounting to nearly 50 lakhs of maunds, as per margin, were received—25,19,300 by country boats, 24,02,900 by railway, 43,000 by road, and 2,800 by river steamer. The principal districts supplying Calcutta are Patna (10,46,000 maunds), Cawnpore (4,87,000 maunds), Nuddea (4,47,000 maunds), Sarun (4,30,000 maunds), Hooghly (3,44,000 maunds), and Durbhunga (2,50,000 maunds). Allahabad, Goruckpore, Mirzapore, Furreedpore, Monghyr, and Midnapore, all exported to Calcutta more than a lakh of maunds. By the East Indian Railway were carried 20,57,700 maunds, and by the Eastern Bengal Railway 3,45,200 maunds. The export from Calcutta by sea is nearly 48 lakhs of maunds.

Nuddea is the only Lower Bengal district in which the cultivation of linseed is considerable. Over a great part of the district the lands are high, and the cold-weather crops are of more importance than rice.

In Bengal proper mustard seed is of greater importance than linseed, and it is also largely cultivated in the Upper Provinces, though less than it is in Bengal. Of all descriptions mustard-oil is the most largely consumed and most relished by the people, and it has been remarked that the cultivation of this crop is increasing. Poor lands and lands recently reclaimed from jungle are generally sown with it, the yield being considerable in comparison with the small amount of labour devoted to cultivating and preparing the land.

The traffic in mustard and rape-seed registered during the year is as follows :—

	Mds.
By boat	40,05,600
„ steamer	96,900
„ road	2,17,000
„ rail	12,66,400
Total	<u>55,85,900</u>

Of the grand total of traffic, Calcutta imported no less than 25,73,000 maunds, as marginally noted, of which 12,08,900 maunds were imported by country boats and 12,66,400 maunds by rail. The difference was imported by steamers and road. The principal marts from which Calcutta received its supply direct are Patna (3,17,800 maunds), Goalundo (2,99,400 maunds), Cawnpore (2,87,400 maunds), Goalparah (2,01,800 maunds), Serajgunge (1,92,700 maunds), Delhi (1,77,000 maunds), and Gowhatty (62,500 maunds). The export from Calcutta by sea is less than 15 lakhs of maunds, and there is therefore a very wide margin left for local consumption in the city.

Notwithstanding its vicissitudes, the production of indigo is still a principal industry in these provinces. In the districts of Nuddea and Jessore, and throughout Central Bengal, in Purneah, and westwards in all Behar north of the Ganges, indigo is largely cultivated, and from its mode of cultivation is in many places the most important article that engrosses the attention of the people.

The indigo riots of 1859-60 were, as is well known, followed by a marked decline in the cultivation of the plant throughout Bengal proper. In some districts, indeed, indigo threatened to become extinct in consequence of the hostility of the cultivators; and although the industry has since shown a tendency to recover itself, the general area under cultivation is less than it was twenty years ago, while the profits to be derived from the growth of jute, of European vegetables, and of valuable garden crops, such as betel, chillies, ginger, turmeric, &c., render the ryots averse to enter into engagements with the planters. The contraction of indigo cultivation in Bengal proper has, however, been counterbalanced in the long run by its extension in Behar and in the North-Western Provinces, and especially by the cultivation of indigo by native capitalists; and the total annual outturn of the country is now hardly less, upon an average, than it was thirty years ago. The average may be said to be rather more than 1,00,000 maunds, valued at somewhat less than two and a half millions sterling.

The total registered imports of indigo into Calcutta during the past year amount to 1,19,600 maunds, of which 1,04,970 maunds were consigned *via* the East Indian Railway, 10,200 maunds *via* the Eastern Bengal Railway, and the remainder by country boats.

The following statement shows an abstract of the imports into Calcutta, province by province :—

	Mds.
Bengal	15,797
Behar	64,790
North-Western Provinces	37,496
Oudh	1,350
Punjab	156
Central Provinces	11
Total	1,19,600

The exports by sea from Calcutta during the year were 94,130 maunds.

Indigo seed was exported largely from Patna, and from Cawnpore and Benares in the North-Western Provinces. Imports amounting to 71,900 maunds were received at Hajeeapore, in Mozufferpore, for distribution throughout North Behar. The north-west supply was also in a great measure sent to Bengal districts; to Moorshedabad 9,000 maunds, to Nuddea 1,500 maunds, and so on. The interchange of indigo seed among districts is very considerable, and the total amount registered is 1,62,000 maunds carried by country boats alone. But there seems to be little or no export of Lower Bengal seed to the Upper Provinces.

Tea is now one of the most important exports from Calcutta. In 1839-40 its value was about $1\frac{1}{2}$ lakhs of rupees, and there was no noteworthy improvement before 1855-56, when the value was nearly $4\frac{1}{2}$ lakhs. In three years it had nearly doubled, and in 1862-63 it stood at 18 lakhs. This progress continued, and in 1867-68 the value was over 68 lakhs. Since then the further increase has been most rapid, and the value of tea has reached its present point of more than two millions sterling, with every prospect of increase.

The average yield of tea per acre calculated upon the entire cultivation is now believed to be rather over 200lb. This amount, though falling far short of the sanguine expectations of the first days of tea-planting, is amply remunerative, and the prices obtained show that the average quality of Indian tea must be very good. It is unquestionable that the industry is now in a good and safe position. The cultivation has enormously extended, and the gardens are, as a general rule, well filled with plant, highly cultivated, and carefully managed. There are evident signs also that the labour question has become more easy of solution.

The total amount of tea imported into Calcutta during the year under review is 29,548,660lb, as follows:—

			lb.
By country boats	89,040
„ river steamers	21,337,120
„ East Indian Railway	6,612,880
„ Eastern Bengal Railway	1,015,520
	Total	...	<u>29,054,560</u>

The supply came principally from Assam, as follows:—

			lb.
Assam	...	Sebsaugor	5,772,000
	...	Cachar	4,123,000
	...	Luckimpore	2,947,000
	...	Sylhet	2,834,000
	...	Durrung	2,725,000
	...	Nowgong	1,846,000
	...	Kamroop	1,062,000
	...	Other districts	28,000
	Total	...	<u>21,337,000</u>

Thus at least three-quarters of the total supply comes from the province of Assam. The exports from Chittagong by sea to Calcutta amount to 494,100lb. The remainder of the supply, amounting to 6,613,000lb, is imported into Calcutta by the East Indian Railway. From Darjeeling, Kurseong, the Terai, and Dooars the supply sent *via* Caragola is about five million pounds; from Kumaon, Kangra Valley, and the Dehra Doon the supply is about 1,500,000lb, and the small margin of between one and two hundred thousand pounds is the produce of the tea-growing districts of Chota Nagpore.

The exports from Calcutta by sea during the year 1876-77, according to the returns of the Custom House, were 27,686,488lb, almost the whole of which went to Great Britain. The imports into Calcutta, therefore, exceed the sea-borne exports by 1,862,172lb.

The following comparative statement, showing the export of China and Indian teas into Great Britain of recent years, will be examined with interest :—

Years.	Export from China.		Export from British India.	
	lb.		lb.	
1868	...	142,111,486	...	9,095,444
1869	...	126,482,613	...	11,241,070
1870	...	125,593,898	...	12,923,993
1871	...	151,636,036	...	15,150,958
1872	...	160,520,882	...	16,445,970
1873	...	Not available.		
1874	...	131,659,998	...	18,440,494
1875	...	170,967,836	...	25,784,866
1876	...	155,897,192	...	28,126,854

These figures show the rapid proportion in which the consumption of Indian tea has increased in England as compared with China tea. Nine years ago the supply of China tea was fifteen times as great as that of Indian tea; it is now little more than five times as great. At the same time it will be observed that the China supplies are really as large as ever; and it is probable that the China cultivation has been little, if at all, supplanted by the increase of cultivation in India.

The production of silk has long been a very important industry in Bengal. In the days of the East India Company numerous large filatures managed by the company afforded a large and valuable trade. The ruins of some of these may still be met with, and on the sites of others are seen new filatures belonging to the firms which have succeeded to the trade. The industry, once so flourishing, has, however, been for some time in a declining state. The extensive importation of silk from Japan and China into Europe since the opening of the Suez Canal, and the abundant yield of recent seasons in Italy, combined with the probable fact that the demand for silk goods has not kept pace proportionately with the increased supply thrown upon the market, have contributed mainly to this decline. The quality of Bengal silk is also reported to be comparatively indifferent, and it has been said that there is now no hope of amelioration in the trade except in the failure of the seasons in countries competing with Bengal. On the other hand, however, this country possesses an advantage in the cheapness of the manufacturing charges, which have been further reduced of late by the introduction of steam in most of the

flatures; and it is certain that, with a superior quality of produce, its success in the market would be quite independent of such a contingency as the failure of a competing country.

During the past year there was an actual improvement in prospects in consequence of bad crops in France and Italy. Silk made an important rise, and according to trade circulars from England the total advance of Eastern silks at the height of the movement was fully 70 to 80 per cent in China silk, in Japan silk 100 per cent., and in Bengal silk about 90 per cent. The value of the export of silk from Calcutta during the past four years is:—

	Rs.		Rs.
1873-74	... 1,13,43,000	1875-76	... 41,10,800
1874-75	... 76,24,400	1876-77	... 93,97,200

The manufacture of silk extends over a considerable part of the Rajshahye and Burdwan Divisions and the district of Moorshedabad. In the province of Assam also silk has been manufactured from a long period, but the export is not now very large. The mulberry-tree is extensively and exclusively cultivated as food for the silk-worm. Almost any high land which will not suit rice will suit mulberry. The manufacture is for the most part carried on by European capital and superintended by Europeans. The silk reeled off in the European factories is exported entirely to Europe.

The total registered imports into Calcutta during the past year amount to 22,616 maunds, the greater part of which was imported by rail. The principal supplying districts are Moorshedabad (9,638 maunds), Rajshahye (7,600 maunds), sent to Calcutta *via* the Kooshtea railway-station, Midnapore (2,337 maunds), and Beerbhoom (1,193 maunds). Assam exported 309 maunds to Calcutta by river steamers; the Punjab, 328 maunds by rail.

The total exports from Calcutta by sea during the year are 22,873 maunds.

The principal sugar refineries in Upper India are in the North-Western Provinces. The principal supply of refined sugar sent into Calcutta comes from the districts of Goruckpore and Ghazipore. In Bengal the trade is principally in date sugar or goor, and is registered as unrefined sugar.

The cultivation of the date-tree and the manufacture of date sugar are very extensively carried on in the district of Jessore, in parts of Nuddea, in the sub-divisions of Busseerhat and Satkhira in the 24-Pergunnahs, and to some extent in Furreedpore. It is a popular and profitable cultivation for the ryots, who grow the trees in clusters about their houses, on the boundaries of their fields, and occasionally in large open gardens occupying broad areas of land.

The juice is extracted from the trees during the cold season. It has been estimated that, after deducting expenses, the ryot clears a profit of six annas per tree, besides the advantage he enjoys from raising a cold-weather or rice crop in the ground occupied by the date garden. A tree yields five seers a season, and many go on yielding for 20 or more years. As many as a hundred trees are frequently planted on a beegha of land. Goor and date sugar are enormously consumed in the districts of their manufacture, and yet are freely exported to Calcutta also.

The genuine sugar plant in these localities has been fairly driven out by the date, and is now languishing: it is, however, widely cultivated elsewhere in Bengal and Behar. Excellent varieties have been imported and tried with success from the Pacific Islands and the West Indies, but the progress of their growth has been injured by blight. A similar account of this deterioration is received from Rungpore and Hooghly. The country qualities are of a very moderate description. But sugar is, as already stated, largely exported from the North-Western Provinces and Behar.

An abstract of the total quantities of sugar registered during the year is as follows:—

				Refined Sugar.	Unrefined Sugar.
				Mds.	Mds.
By country boat	11,65,700	22,78,900
„ steamer	11,100	400
„ rail	3,03,600	5,62,700
„ road	1,04,600	1,19,200
Total				15,85,000	29,61,200

Jessore is far the most important of the sugar districts of Bengal. The total of the exports of unrefined sugar from the Jessore district is as much as seven and three-fourths lakhs of maunds; from Nuddea the exports are less than two lakhs; from the 24-Pergunnahs the exports are two and three-fourths lakhs of unrefined sugar and a lakh and a half of refined sugar. The district of Furreedpore calls for special mention, with an export of more than two lakhs of maunds. All these districts export to Calcutta, Backergunge, Pubna, Dacca, and Mymensing. Calcutta imports by the Eastern Bengal Railway above 2,75,900 maunds of unrefined sugar, and nearly the whole of the supplies from the 24-Pergunnahs and much of the river-borne export from Jessore and Nuddea come also to Calcutta. The large marts of Jhalokati and Nulchitty import from Jessore in exchange for the rice sent into the northern part of the Jessore district. Serajgunge and Naraingunge import from Jessore and Furreedpore.

The total imports into Calcutta are 9,71,600 maunds of unrefined and 6,91,700 maunds of refined sugar. There are important sugar refineries in the suburb of Cossipore. The exports from Calcutta by sea during the year are of course all in refined sugar, and amount to 11,02,335 maunds, or 809,519 cwt.

Tobacco is grown more or less extensively in every district in Bengal; but with the exception of Rungpore and the Dooars, and a part of Tirhoot, Purneah, 24-Pergunnahs, and Nuddea, there is hardly a place in which it is sown for trade and export. Tobacco is, however, universally grown for local consumption. The cultivator ordinarily takes up a small plot of land at his homestead, near his cow-house, for the convenience of manuring the land, as he always, if possible, manures his tobacco crop. In Baraset and elsewhere, where indigo cultivation has mostly died out, tobacco has been found to thrive well on the old indigo lands, and may be seen planted up to the very edge of the ruined vats. Tobacco is

reared in a nursery in August, September, and October, is transplanted a month later, and the leaves are ready for gathering from January to March.

The Rungpore, or *Kochar* tobacco, as it is called, is distributed all over Eastern Bengal, and a not inconsiderable quantity leaves the country and goes to British Burmah and elsewhere. The climate and soil of Rungpore are remarkably suited for the cultivation of tobacco, and it is possible that in a few years the growth of this plant may become of far greater importance than it now is. What is most wanted at present is to introduce improvements in the curing process. As evidence of the excellence of the Rungpore tobacco, it may be noted that a medal was obtained by a native of the district for a specimen which he exhibited at the Paris Exhibition of 1867.

The quality of the tobacco grown in Rungpore is esteemed by the natives, and tobacco has been a staple of the district for at least a century past. The trade is chiefly in the hands of Mughhs, forty or fifty of whom come annually to the district and export the tobacco to Calcutta and to Naraingunge and Chittagong for export to Burmah. This tobacco is eventually for the most part made up into Burmah cheroots, and is manufactured in Calcutta as well as in Burmah. The produce varies from six to twelve maunds an acre, while the price varies from Rs. 3 to Rs. 7 per maund. The Burmese Mughhs, who import tobacco into their own country for the purpose of making cheroots, select the very broad and thick-leaved plant, neither too mild nor too strong, and pay as much as Rs. 7 a maund for it. The variety most prized by them is called by the people *hatee kan*, from its resemblance to an elephant's ears.

In Dinagepore, Cooch Behar, and Julpigoree also tobacco is widely cultivated, and the produce of Cooch Behar specially is highly esteemed. In Purneah the best localities for tobacco are the west and north-west of the district.

In the 24-Pergunnahs and Nuddea districts tobacco is generally grown merely for domestic use, but in a tract of country including the northern part of the Baraset sub-division of the 24-Pergunnahs district and the southern portions of Ranaghat and Bongong, in Nuddea, the cultivation is of more importance, and the crop is exported. The quality and price vary considerably. The best tobacco is called the Hinglee tobacco, from Hinglee, a village on the left bank of the Jamoona river, three or four miles west of the Gaighatta thana, in Nuddea. Tobacco going by the name of Hinglee tobacco is grown generally over this area, and sells for from Rs. 5 to Rs. 7 or Rs. 8 per maund. The exports are mostly to Calcutta, and are registered at the station established at Kamardangah, on the Baraset road.

In Behar the principal cultivation of tobacco is in the Tirhoot district, and the most extensive cultivation, as well as the best tobacco, comes from the Tajpore sub-division, in pergunnah Sareysa, which is famous for the good quality of the plant. The average yield per acre is said to be about 14 maunds, and the price is about Rs. 5 per maund. Tobacco leaves the district in various ways: some of the ryots themselves export it in carts to Nepal, or take it to Hajepore and other river marts in the district and there dispose of it, while many thousand

maunds are bought up by the travelling merchants and transported by river and rail to the Upper Provinces and Bengal.

The grand total of tobacco traffic registered in the interior of Bengal during the last year is as follows:—

					Mds.
By boat	17,24,100
„ steamer	28,200
„ rail	2,80,900
„ road	1,13,000
Total					<u>21,46,200</u>

The Calcutta consignments were derived from the districts noted below, the grand total of imports being 5,21,700 maunds, of which 2,80,900 maunds were carried by the Eastern Bengal Railway, 1,54,300 maunds by country boats, 58,500 maunds by road, and 28,000 maunds by steamer. In addition to the above supply 1,100 maunds of tobacco were imported into Calcutta by the East Indian Railway, and 13,200 maunds were exported from Calcutta by that route; but the exporting and importing stations and districts are not known. This quantity has therefore not been included in the tobacco statement. The return from all sources shows 5,22,800 maunds of tobacco imported into Calcutta during the year. The total exports by sea during the same period are 3,93,500 maunds of raw tobacco, 7,500 maunds of manufactured tobacco, cheroots 1,897,400 in number, and cigarettes 62,200 in number:—

					Mds.

Total					<u>5,21,700</u>

The cultivation of cotton is not of first rate importance in any of the districts of Bengal, with the exception of the Cotton. Chittagong and Tipperah Hill Tracts, and possibly parts of Julpigoree also. Throughout the hills of the Northern and Eastern Frontiers, however, cotton is a most important staple; and in all the Assam ranges, as well as the Tipperah, Looshai, Kookee, and Chittagong Hills, the cultivation is much of the same character and extending in area. There is also some cotton in the Western Hills; but in the plains of Bengal, so fertile in other produce, the production of cotton is an inconsiderable industry, and nothing is exported, while much is imported from the North-Western Provinces. The crop takes kindly to the soil in some parts of the Burdwan Division; in Orissa

there is a growing cultivation and a probability of the produce being benefited by irrigation. But even in Behar, where the cultivation is comparatively most extensive, no indigenous cotton is exported, as the crop grown is not sufficient for the requirements of the people, and has to be supplemented by a trade in cotton imported by land or river from the west, and by an increasing importation of English piece-goods.

Generally speaking, then, it may be said that the production of cotton does not form an important industry of the cultivators in Bengal. It is cultivated, not as an article of commerce, but for the sake of variety and domestic use, the agricultural classes only preferring strong home-made spun cloth to the less durable machine-made European cotton piece-goods procurable in the bazaar. There is no anxiety on the part of the cultivators to extend or improve the cultivation of cotton, which is gradually, but surely, being driven out of the market by the introduction and increasing use of foreign twist and cloth.

There is, however, an important export trade in cotton from Calcutta. The facilities of communication by railway attract the surplus produce of the Upper Provinces to Calcutta. But the whole of this traffic is by railway, not by river. Calcutta imports only 8,023 maunds of cotton by country boats, and it is remarkable that no cotton appears to be conveyed direct from the North-Western Provinces to Calcutta by river route.

By the East Indian Railway, however, the imports are very large, and arrive exclusively from the North-Western Provinces, Punjab, &c. The total is 4,61,161 maunds. No cotton was imported by the Eastern Bengal Railway. The registered imports of raw cotton by road amount to only 1,744 maunds. The imports into Calcutta by sea are 1,54,275 maunds, being from Bombay 72,761 maunds, from Madras 37,579 maunds, from British Burmah 43,200 maunds, and the remainder from other Indian ports.

The total imports into Calcutta from all sources amount, therefore, to 6,25,203 maunds, or 459,337 cwt., valued a million and a quarter sterling. The exports are 64,409 maunds by river routes, 3,231 maunds by road, 18,971 maunds by railway, and 4,23,526 maunds by sea,—altogether 5,10,137 maunds, or 374,793 cwt., valued at a million sterling.

A surplus of 1,15,066 maunds remains for local consumption in the cotton mills established in the vicinity of Calcutta.

No information is available showing the importation of cotton by railway into any of the Bengal districts.

The hide trade of Calcutta has of late years presented an appearance of abnormal activity. In 1871-72 seven millions and a half of hides were exported by sea; in 1872-73 more than seven millions. The exports have, however, since shown a decrease, and in the past year amounted to only 4,543,973 pieces. The trade is conducted entirely by Mahomedans, and is a matter of keen business. The smallest scrap of East Indian leather is not without its value in the Indian market, and slaughtered and dead hides and rejections are sought for with eagerness. Dacca, Patna, Cuttack, Midnapore, Burdwan, Purneah, and Tirhoot, are the principal centres of the trade in the interior of these provinces.

The total registered import of hides into Calcutta from the interior of the country is 4,032,380 pieces; thirty-five lakhs were imported by rail (27,88,780 by East Indian Railway and 7,13,935 by Eastern Bengal Railway) and five lakhs by river. In addition to this supply nearly four lakhs were imported by sea, including 1,59,000 pieces from Orissa and 50,000 from Chittagong; the rest came from Madras and Burmah.

The principal supplying districts are—Patna (13,00,000), Dacca (6,50,000), Burdwan (3,00,000), Midnapore (2,50,000), Purneah (2,00,000), Delhi (1,75,000), Bhagulpore (1,50,000), Cuttack (1,50,000), Cawnpore (1,25,000), Monghyr, Nuddea, and Rungpore, each about one lakh of pieces. Mozufferpore, Ghazipore, and Goruckpore, exported between them about three lakhs of pieces to Patna; Mymensing sent 78,000 pieces to Dacca, in both cases for re-export to Calcutta. Generally speaking it may be said that the imports into Calcutta are 10½ lakhs from Central, Eastern, and Northern Bengal, 6 lakhs from the Western Districts of Bengal, 19 lakhs from Behar, and 5 lakhs from the provinces of Upper India beyond the Bengal frontier.

Saltpetre is largely refined in the northern districts of the Patna Division, in Behar, and is exported both by river and rail to Calcutta. Like all branches of industry in India, its manufacture is based on a system of advances. The large houses of business contract generally with middlemen, who again give advances to the village noonyas. These, a poor and hardy race of labourers, rent a small site of saliferous earth, collect the earth into large shallow pans, puddle it, and drain off the water with the saline matter in it into earthen vessels, and then boil and strain it; and the crude saltpetre thus manufactured is sold to the refiners, by whom is prepared the saltpetre of commerce.

The exports of saltpetre from Calcutta have been fairly constant during the past six years, an increase of exportation in one year being generally adjusted by a decrease in the next. The figures are—

Official Year.	Cwt.	Equivalent in maunds.
1871-72	424,638	5,77,980
1872-73	500,199	6,80,826
1873-74	444,293	6,04,732
1874-75	540,331	7,35,450
1875-76	400,735	5,45,445
1876-77	464,174	6,31,790

Half this supply goes to Great Britain. The total imports of Great Britain during the past calendar year 1876 were 260,583 cwt., and of this amount as much as 247,197 cwt. were sent from Calcutta.

The following statement shows the import and export trade of Calcutta during the year 1876-77 :—

		Mds.	
Imports into Calcutta	{ By boat	...	1,00,531
	{ „ East Indian Railway	...	5,18,371
Total		...	6,18,902
Exports from Calcutta	By sea	...	6,31,790

Saltpetre is imported into Calcutta principally from Tirhoot and Sarun. The railway supplies are mostly from Patna, but the stations of this district derive their importations from Tirhoot and Sarun. A considerable quantity is also imported into Calcutta from Cawnpore. The exact supply imported from all sources into Calcutta is 6,18,900 maunds, as follows:—

	Mds.
From Bengal districts	4,72,200
„ North-Western Provinces	1,20,800
„ Oudh	1,100
„ Punjab	24,400
„ Central Provinces	400
Total	6,18,900

The net exports of saltpetre from Behar only are 4,69,500 maunds.

The staples of which an account has hitherto been given are all the produce of the country, and are exported from the interior of the province to Calcutta, and are thence shipped to Great Britain and other countries by sea. The important staples which it still remains to consider—cotton piece-goods, cotton twist, and salt—are imported into Calcutta by sea, and are thence distributed inland, to meet the local requirements of the people of this country. It is Great Britain that supplies both cloth and salt to Bengal.

The official accounts relating to trade and navigation of the United Kingdom, which are compiled at the Custom House from documents collected by that department, show that the total value of cotton manufactures exported from Great Britain during 1876 was £50,374,875. This is less than the exports of preceding years, the figures being in 1875 £58,626,926 and in 1874 £59,022,645. During 1876 the principal importing countries were—

British India—	12,758,673
Bengal	...	8,132,707
Bombay	...	3,961,763
Madras	...	664,203
China	5,026,094
Turkey	4,188,074
Brazil	2,813,747
France	1,629,100
Italy	1,349,669
United States	1,279,106

British India, it will be seen, receives one-fourth of the supplies, and Bengal alone, that is to say Calcutta, receives about one-sixth.

Almost the whole of the supplies received into Calcutta are sent by Great Britain; but to some extent supplies are received from America, and also from France.

The total registered imports of Calcutta by sea during the year under review are valued at Rs. 9,67,63,105, and the detailed distribution of this supply into the interior of Northern India has now for the first time been registered.

The total value of cotton piece-goods imported into Calcutta by sea as per tariff declaration value is shown in the above statement to amount to nearly 9½ crores: to this must be added (say) 25 per cent. on account of under-statement of declaration value, and on account of profit and risk of importers and of retail vendors in Bengal. A considerable sum must also be added on account of cost of freight and for distribution in the interior. When these are added, the total value of the year's traffic will amount to 12¼ crores of rupees. The returns of registration in India show piece-goods exported from Calcutta to the value of 11½ crores, and the local consumption in Calcutta accounts for piece-goods to the value of a quarter of a crore, leaving a surplus of 51 lakhs of rupees worth of piece-goods, of which 25 lakhs may be allowed for consumption within the Hooghly district and within parts of the 24-Pergunnahs which escape registration, and the remainder will represent the stock in trade at Calcutta.

The following statement will put this clearly:—

<i>Cotton (European) Piece-Goods.</i>				Rs.
Imported into Calcutta by sea, as per invoice declaration value				9,67,63,105
Add 25 per cent. on account of under-statement of declaration value and on account of profit and risk of importers and of retail vendors in Bengal				2,41,90,776
Add cost of freight—				
				Rs.

Ditto Hooghly and in parts of the 24-Pergunnahs	25,00,000
Balance in reserve, say	25,94,829
Grand Total				<u>12,31,53,881</u>

The local consumption of piece-goods per head in Calcutta, both English and native, may be fairly taken at Rs. 3¼. In the interior of Bengal it is taken at Rs. 2¼ only. Inquiries also lead to the belief that the consumption of native piece-goods in Calcutta amounts to about one-fifth of the whole consumption. In the interior this proportion varies from three-fourths to one-fourth. The figures then will be as follow:—

The total consumption of cotton piece-goods in Calcutta, Howrah, and the Suburbs, being a population of 900,000, if taken at Rs. 3-8 per head		31,50,000
Of which native piece-goods at 20 per cent.	...	6,30,000
And Manchester goods at 80 per cent.	...	25,20,000
		<u>31,50,000</u>

The total import of cotton twist and yarn into Calcutta by sea during the year 1876-77 is 1,74,821 maunds, valued at Rs. 1,22,37,470. Of this quantity 1,60,600 maunds are shown in the returns as exported from Calcutta into the interior of the country,—1,02,700 maunds going by rail and road, and 57,900 maunds by country boat and steamers.

In Lower Bengal salt used to be manufactured and sold by the officers of Government, the sum charged being the cost price added to a fixed rate of duty, which in 1856-57 was Rs. 2-8 a maund. In 1862 the system was changed, and it was resolved that the agencies should be gradually abolished and the supply of salt be left to private enterprise. The consumption of salt in Bengal is now entirely met by importation, except in Orissa and in part of the 24-Pergunnahs, where it is manufactured under excise rules. The customs duty on imported salt has been Rs. 3-4 per maund since March 1861. The salt is almost entirely derived from Liverpool, but the proportion imported from other countries is on the increase.

The amount of salt imported into Calcutta during the past year is 76,57,400 maunds; the amount imported into Chittagong is 1,51,488 maunds. Besides these amounts 92,883 maunds are registered as having been imported into Orissa from Madras by land. The total quantity of imported salt is therefore 79,01,771 maunds. The amount of salt manufactured under excise license is 3,74,000 maunds in Orissa and a small quantity in the 24-Pergunnahs, say four lakhs of maunds in all. The total supply of taxed salt available for consumption will then stand at upwards of 83 lakhs of maunds. But from this amount must be deducted exports beyond the Bengal Provinces—4,36,600 maunds to Assam, 3,25,600 maunds to the North-Western Provinces and Oudh, 76,900 to Nepal—altogether more than eight lakhs of maunds exported. In round numbers seventy-five lakhs of maunds are left for consumption in the provinces under the Lieutenant-Governor of Bengal. The population of these provinces being 62,706,774 souls, the consumption of the population for the year will be at the rate of 4.75 seers, or 9½ lb per head.

The following statement shows the total salt trade of Calcutta during the past two years 1875-76 and 1876-77 :—

YEAR.	IMPORTS INTO CALCUTTA BY SEA.			EXPORTS FROM CALCUTTA AND HOOGHLY.							GRAND TOTAL OF EXPORTS.
	From foreign ports.	From Indian ports.	Total.	Inland Exports.						Exports by sea.	
				By E. I. Railway.	By E. B. Railway.	By steamer.	By boat.	By road.	Total.		
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
1875-76	95,36,684	17,37,035	1,16,171	56,48,601	75,02,707	75,02,707
1876-77	69,00,000	7,57,400	76,57,400	19,42,100	4,42,600	1,08,400	48,38,800	30,400	73,71,400	16,000	73,87,400

During 1875-76 the imports were the largest on record, and an unusually large supply of salt, $41\frac{1}{2}$ lakhs of maunds, sufficient for more than six months' consumption for the whole of Bengal, remained in stock at the close of the year. At the close of the year 1876-77 the amount that remained in stock was still upwards of 37 lakhs of maunds. The amount therefore that remained for consumption in Calcutta and its environs, in the Hooghly district, and in a great part of the 24-Pergunnahs, is the difference between the stocks in hand at the close of 1875-76 and 1876-77 *plus* the difference between the grand total of exports and the grand total of imports into Calcutta during 1876-77. The amount will be a little above seven lakhs of maunds for a metropolitan and *quasi*-metropolitan population of about three millions souls. This allows for a consumption at the high rate of $8\frac{3}{4}$ lb per head of the population.*

The total value of the registered trade of Calcutta, including Howrah and the Suburbs, with the interior of the country is as follows:—

Trade of Calcutta.

<i>Imports.</i>				Rs.
Imported by country boats	10,14,92,500
„ by river-steamers	2,56,36,800
„ by East Indian Railway	10,00,31,100

„ North-Western Provinces	2,88,00,941
„ Oudh	6,93,899
„ Punjab	1,80,22,610
„ Central Provinces	8,87,050
„ Rajpootana States	12,51,380
„ Nizam's Territory	11,700
„ Madras	10,78,832
„ Bombay	3,72,810
Total				6,34,18,638

An effective registration of the traffic between Bengal and the province of Assam presents considerable difficulties owing to the great length of the frontier line, and it has been impossible to maintain an efficient supervision over any part of the frontier except the main river routes. The great bulk of the traffic is conveyed by these routes. The traffic carried by land is too small and unimportant to repay the cost of registration. It is believed that at the river stations of Chilmaree and Bhoyrub Bazaar the trade between Bengal and Assam has been fairly registered. The principal exports and imports are as follow :—

Exports from Assam into Bengal.

Beteinuts "	30,128	1,80,768
Gunny-bags No.	810,800	1,78,400

The most important trade is by rail with Calcutta. Cawnpore is the station of the North-Western Provinces that exports most food-grains, especially wheat and oil-seeds, and it imports the largest supply of European cotton piece-goods. More rice goes to the North-West than is exported from those provinces; but with that exception all other food-grains are exported from the North-Western Provinces to Bengal. Sugar is an export of great value, also indigo and cotton. The only supplies received from Bengal are English cloth goods and twist, and consignments of salt to the districts of Ghazipore and Goruckpore. The piece-goods received by rail are valued at $2\frac{1}{2}$ crores in value; but this large import, notwithstanding the general balance of trade, is largely in favour of the North-Western Provinces, as against Bengal.

Trade with Oudh.

An abstract statement is also prepared to show the principal staples of traffic between Oudh and Bengal :—

EXPORTS FROM OUDH INTO BENGAL.							By boat.	By rail.	Total value.
							Quantity.	Quantity.	Rs.
Linseed	Mds.	4,10,200	6,300	16,68,000

IMPORTS INTO OUDH FROM BENGAL.							By boat.	By rail.	Total value.
							Quantity.	Quantity.	Rs.
European cotton piece-goods	Rs.	1,94,560	1,94,560
Ditto cotton twist and yarn	Mds.	4,023	2,81,610
Salt	"	23,500	1,17,500

The exports from Oudh largely exceed the imports into that province. The districts of Oudh are a great granary of oil-seeds and food-grains. The greater part of the trade is by boat with the marts of Revelgunge and Patna. It is only the railway trade between Calcutta and Oudh that is registered.

The province of Oudh has been amalgamated with the North-Western Provinces during the year under review; but the traffic returns have been shown separately, as the provinces were separate for most part of the year. In future reports the provinces will be shown together in one statement.

The trade between these provinces and Calcutta is all by rail.

Trade with Punjab, Central Provinces, Rajpootana, Bombay, and the Nizam's Territory.

The export of raw cotton, food-grains, and oil-seeds from the Punjab is considerable. There is no large export from any of the other provinces.

The only registered import into these provinces from Calcutta is cotton piece-goods and cotton twist. The export of cotton piece-goods from Calcutta to the Punjab is valued at Rs. 1,66,73,920.

Trade between Bengal and Punjab, Central Provinces, Rajpootana States, Bombay, and Nizam's Territory during the year 1876-77—concluded.

In the present report the sea-borne trade of Bengal with Madras is not registered. In consequence of the famine Trade with Madras. the exports from Calcutta to Madras, especially of rice, have been larger in the past year than were ever before known. The rice exports amount to 85 lakhs of maunds, sent to Madras by sea. In the annexed statement it is only the land trade between Orissa and Ganjam that is registered. The registration station is situated at Rumbha, on the imperial road, about 10 miles from Ganjam, and 40 as the crow flies, or 100 by road, from Pooree, and the port is therefore placed under the Ganjam authorities.

The principal items of this interprovincial trade are—

Exports from Orissa into Ganjam.

					Rs.
Paddy	5,32,966
Rice	1,67,010
Wheat	1,33,495
Brass and copper	89,520

Imports from Ganjam into Orissa.

Salt	4,64,515
Unrefined sugar	1,12,572
Indian piece-goods	56,550
Gunny-bags	34,873

The total value of the export from Bengal is Rs. 10,76,433; the value of the import into Bengal is Rs. 10,78,832. The balance of trade is therefore almost exactly equal, on the one side being raised by consignments of salt and sugar, and on the other by an export of food-grains. In bulk only the balance is largely in favour of Bengal. The miscellaneous imports from Madras, valued at Rs. 1,56,370, include a consignment of jewellery from Ganjam and Vizagapatam, valued at Rs. 1,50,000.

The registration of traffic as it crosses the frontier between Bengal and foreign territory has also been attempted. The foreign provinces concerned are Nepal, Sikkim, and Bhootan. The trade is entirely by land, and carried by carts and on pack-bullocks, and occasionally by coolies. Timber only is floated down the rivers. The difficulties in the way of registration are, however, so considerable, the channels of communication so numerous, and the length of frontier so great, that it has been found impossible to establish a cordon of stations that will effectually register this traffic; and there is no doubt that the returns of trade with countries beyond the British frontier are the least satisfactory part of the Bengal registration. In time it is probable that the returns will become more complete; but improvement can only be effected by the establishment of more stations and the expenditure of more money. During the past year the number of frontier stations

Frontier trade between Bengal and provinces beyond British India.

was twenty-two, along a frontier of more than three hundred miles. The following is an abstract of the trade registered :—

Exported from Bengal into				Imported into Bengal from			
			Rs.				Rs.
Nepal	46,75,009	Nepal	55,07,816
Sikkim	1,41,647	Sikkim	8,02,657
Bhootan	7,590	Bhootan	12,708
Total	48,24,246	Total	63,23,181

There are as many as 17 frontier stations established to register the traffic that crosses the frontier between Bengal and Nepal; the frontier extends all the way from Chumparun to Darjeeling. The following statement shows the value of the principal imports and exports :—

Exports from Bengal into Nepal.

	Rs.
European cotton piece-goods	14,11,176
Indian ditto	3,84,907
Salt	3,89,300
Cattle	3,01,590
Sugar, refined	1,47,588
Cotton	1,66,575
Brass and copper	2,08,560

Imports from Nepal into Bengal.

	Rs.
Cattle	14,35,410
Gram and pulses	1,32,592
Other spring crops	1,61,574
Rice	5,41,564
Paddy	3,26,293
Linseed	5,56,360
Mustard-seed	4,40,440
Timber	2,90,670

The total value of the trade from Bengal is Rs. 46,75,009; the total value of the trade from Nepal into Bengal is Rs. 55,07,816.

The most important exports from Bengal may be said to be European piece-goods, cotton, and salt. A detailed statement of the trade in these staples will illustrate the proportion of Nepalese trade with the several Bengal districts :—

Exporting Districts.	European piece-goods.	Native piece-goods.	Cotton.	Salt.
	Rs.	Rs.	Mds.	Mds.
Calcutta	3,41,300	200	2,600
Chumparun	2,69,100	37,100	3,600	9,000
Mozufferpore	1,45,900	38,600	1,000	35,100
Patna	2,29,800	5,800	900	100
Purneah	1,36,200	19,300	200	12,300
Bhagulpore	66,000	7,100	100	6,700
Durbhunga	17,100	51,000	100	1,000
Sarun	1,12,200	61,100	1,300	10,300
Other districts	93,600	1,64,900	3,700	800
Total	14,11,200	3,84,900	11,100	77,900

The large quantity of European piece-goods exported to Nepal is worthy of notice. Almost all that is returned as entering Nepal from Chumparun, and a great deal of what is separately returned as entering Nepal from Calcutta, Patna, and Sarun, is destined for the Katmandoo market. The European cloth is in favour with the higher classes, who congregate at and near the capital, who import for their own consumption, and also, it is understood, re-export a moderate amount to Lahsa, in Thibet. The raw cotton is woven by the labouring classes into a durable coarse cloth. The whole trade may, in fact, be said to be with Katmandoo, where the court, the army, and all the higher paid officials reside, and where there is a long established mercantile connection with Thibet.

A similar statement has been prepared for food-grains and oil-seeds, which are the principal imports into Bengal from Nepal :—

Importing Districts.		Rice.	Paddy.	Linseed.	Mustard seed
		Mds.	Mds.	Mds.	Mds.
Mozufferpore	...	1,45,600	50,700	95,600	37,900
Durbhunga	...	14,500	69,100	5,800	12,600
Chumparun	...	19,000	1,04,900	23,700	21,500
Purneah	...	19,200	62,200	1,700	14,800
Other districts	...	72,500	39,400	12,300	23,300
Total	...	2,70,800	3,26,300	1,39,100	1,10,100

The large imports of rice and paddy into Tirhoot are due to the partial scarcity that prevailed during the past year in the north of that district. The drought, however, is said to have extended to Nepal as well as to Tirhoot, and there is no evidence to show that the export from Nepal was larger than is usually the case. The great bulk of timber imported into Bengal was sent to Purneah. Cattle for the most part were sent from Nepal by the Mozufferpore routes.

Almost all the articles in the registration list are both exported from, and imported into, Nepal. In some cases, such as spices, condiments, drugs, and dyes, there is not sufficient detail to distinguish between articles of Nepalese and those of British Indian origin; in others it may be that advantage is taken of an easier route through British Indian territory to transfer an article of Nepalese origin to some other part of Nepalese territory; in others, again, a staple is grown in one part of Nepal, as cotton in the Morung, but not in another, and therefore while an export on the east, it is an import on the west. The export of such things as European cotton cloth can only be regarded as a return of unsaleable fabrics.

A variety of information has been received from the local authorities regarding the duties to which traders are liable after they leave or before they enter British territory. It is obvious that a knowledge of the incidence of such duties will in many cases tend to explain the preference given to some routes over others, and the relative expansion or depression of trade in particular articles. The whole of the information received was laid before Mr. Girdlestone, the Resident at Nepal,

at his request, and a full report on the subject by that officer has been submitted for the consideration of the Government of India. The material parts of this report have been published, and it is not necessary to repeat here the conclusions which were arrived at by Mr. Girdlestone and concurred in by the Bengal Government. It need only be said that, generally speaking, it appears that the Nepalese frontier tariff is imposed rather with reference to revenue than protection (although, doubtless, in many instances protection is also considered), and that the incidence of the duties is not so great as to materially interfere with trade.

The trade between Bengal and Sikkim and Thibet is registered at frontier stations established within British territory. The following are the most important imports and exports:—

<i>Exports from Darjeeling into Sikkim.</i>				<i>Imports into Darjeeling from Sikkim.</i>			
			Rs.				Rs.
Indigo	66,000	Timber	7,08,708
Cattle	23,220	Cattle	19,710
Brass and copper	14,520	Miscellaneous	14,457

The total value of exports to Sikkim during the year is Rs. 1,41,647, of imports from Sikkim Rs. 8,02,657. The imports are nearly all made up of timber, and with this exception the traffic is insignificant.

There are three frontier stations in Julpigoree to register the traffic passing between Bengal and Bhootan. The result is very insignificant; the export from Bengal is valued at only Rs. 7,590, the import into Bengal at only Rs. 12,708.

Roads, Canals, and other Public Works.

THE total expenditure on public works in Bengal during the year 1876-77 amounted to Rs. 1,09,42,420, which was distributed as follows :—

					Rs.
Imperial	...	{	Guaranteed Railways	...	14,926
			Military and other services	...	4,79,270
			Irrigation	...	44,12,378
Provincial	...	{	Proper	...	25,59,247
			Reserve, exclusive of grants-in-aid	...	
			to District Road Funds...	...	4,52,768
Local Funds	62,546
District Road Works	23,52,799
Total expenditure from Public Works Funds ...					<u>1,03,33,304*</u>
Local loans, Dancoonee Project	7,280
Tuccavee outlay	2,92,734
Contributions	3,09,102
Total					<u>6,09,116</u>
Grand Total					<u>1,09,42,420</u>

The operations connected with railways and irrigation works are noted in succeeding chapters, and the following remarks apply only to ordinary works.

The number of district engineers and executive staff belonging to the district road cess committees has increased, and out of 44 districts under this Government 31 districts now have their own district engineers and staff. The remaining districts are endeavouring to get their own officers, but the small resources of some of these districts constitute a serious difficulty in obtaining qualified persons to fill the posts; and it is almost impossible for such districts to secure the services of Government officers in consequence of the financial rule which requires a heavy contribution to be made by Government officers locally employed in order to secure their pensions from Government.

The system of practical instruction for youths who have been pronounced theoretically qualified by the Civil Engineering Department of the Presidency College, which has been commenced in the Public

* Inclusive of Rs. 2,50,391 expended in England on account of stores.

Works Department at the Presidency, will furnish ere long a source from which district employés could be recruited, and the difficulty of obtaining really efficient and trained men for district works will gradually disappear.

The changes in the Public Works Department which were rendered necessary by the withdrawal of district works from this department have been fully carried out, and the divisional executive charges have been re-arranged by the formation of sixteen Public Works divisions in lieu of twenty-five.

The addition of one Superintending Engineer which was made last year has been productive of benefit, but the assistance afforded by the Department of Public Works to road-cess committees is not what is desired or desirable. This is partly due to unavoidable changes amongst the Superintending Engineers, and partly to the circles of superintendence being still very large.

The measures for introducing more system and economy in effecting the repairs of buildings and roads are being pushed on; but, as previously remarked, the full financial results of the system will not be apparent until some years have elapsed.

The system of encouraging contractors, of calling for tenders in the most public manner, and, in the absence of very special reasons to the contrary, of accepting the lowest tender, is working well; but there is a good deal of *vis inertiae* to be overcome before it can be thoroughly carried out.

A most unprecedented high cyclone-wave passed over the Chittagong, Noakhally, and Backergunge districts, and caused great loss of life and property, but there was not much damage done to the Chittagong Trunk Road or to the Government buildings, except in the sub-divisions of Dowlutkhan, Patookhally, and Perozepore, which were exposed to the cyclone-wave. A portion of the timber revetment wall of the Kootubdea lighthouse was breached, and the embankments and stone facing which protected the Norman's Point Lights were entirely destroyed.

The expenditure on imperial works during the year amounted to Rs. 4,79,270, of which Rs. 44,382 were incurred on unimportant military works and Rs. 4,34,888 on civil buildings. Of this sum Rs. 2,63,045 were expended on the construction of new buildings, and Rs. 1,71,843 on maintenance and repairs of existing buildings.

The following important works were under construction during the year:—

Imperial Museum.—Iron cases and galleries in the completed main building; also latrines and out-offices, and gas and water fittings.

New Telegraph building.—The new Telegraph Office, with its out-offices, was entirely completed during the year and occupied by the Telegraph authorities.

Viceregal buildings.—New roofs with iron girders were substituted for the old roofs with sâl beams over the ball-room of the Government House at Calcutta and over that of the drawing-room at Barrackpore.

Provincial works.

The outlay on provincial works during the year was Rs. 25,59,247, distributed as follows:—

	Rs.
Civil buildings	12,94,021
Communications	12,48,484
Miscellaneous public improvements	16,742

The expenditure incurred from provincial funds on account of each department of the provincial administration is shown in the following table:—

	Original works.	Repairs.	Total.
	Rs.	Rs.	Rs.
Land revenue	82,285	1,07,800	1,90,085
Excise	6,522	1,943	8,465
Customs	3,989	25,036	28,975
Residences for local Governments	29,923	23,715	53,638
Secretariat offices	3,135	24,864	27,999
Board of Revenue	343	343
Minor departments—			
Monuments and antiquaries	20	599	628
Law and Justice—			
High Courts	6,602	2,373	9,035
Small Cause Courts	707	707
District Courts	40,125	36,062	85,187
Ecclesiastical—			
Churches	9,323	20,568	29,891
Burial grounds	1,17,753	3,932	1,21,685
Jails—			
Central jails	99,648	2,975	1,02,623
District jails	44,135	56,448	1,00,583
Other buildings, such as lock-ups, hajuts, &c.	4,790	15,584	20,374
Police	29,745	14,313	44,058
Registration	39,166	93	39,259
Education—			
Government colleges	1,125	3,498	4,623
Ditto schools	31,422	14,649	46,070
Hospitals and dispensaries	35,928	26,239	62,167
Lock-hospitals	9,204	9,204
Medical colleges and schools	1,37,783	9,107	1,46,890
Lunatic asylums	32,673	21,003	54,603
Miscellaneous or general	63,823	35,179	99,002
Public works	4,102	3,712	7,874
Total ...	8,42,300	4,51,721	12,94,021

In addition to these sums the following outlay was incurred from contributions received from various sources:—

	Rs.
Police	1,797
Education	22,024
Medical	29,048
Churches	11
Land revenue	33
Monuments and antiquaries	17,388
Miscellaneous or general	2,403
Total ...	72,704

The central jail buildings at Bhagulpore were entirely completed during the year; the buildings of the central jail at Midnapore were also all brought to completion during the year, and the only work remaining to render this jail complete is its water-supply, a project for which is under consideration.

One of the work-sheds in the Hazareebagh central jail have been completed, and other works required to complete this jail are in rapid progress.

The progress of work in the conversion of the stud buildings at Buxar into a central jail has been satisfactory, and the north portion of the boundary wall has been nearly completed.

Treadmill-sheds were completed at the jails at Midnapore, Rajshahye, and Burrisal, and some extensive special repairs were carried out in the wards of the Dinagepore jail.

The Campbell Medical School at Sealdah was all but completed, but was not fit for occupation. The plan of the proposed medical college at Dacca was nearly completed by Major C. Mant, R.E., and bricks were brought to site with a view to the early commencement of the work on completion of design.

No work of importance under this branch has been carried on during the year. The designs for the madrissa colleges at Rajshahye, Dacca, and Chittagong have been completed by Major Mant, R.E., whose services were temporarily placed at the disposal of this Government for architectural designing; and estimates on the designs for the madrissa colleges at Dacca and Rajshahye were prepared. The estimate for Chittagong was returned, as it is in contemplation to transfer the present Judge's court for the purposes of a madrissa college at the place.

The work executed in connection with these branches of the administration consisted mainly of unimportant additions and alterations to existing buildings. Among new buildings deserving of notice are the court-house for the Collector of Dinagepore, an Assistant Commissioner's court-house at Ranchee, and the meteorological observatory at Alipore. Materials were being manufactured for a church at Julpigoree. Materials were also collected for the erection of registry buildings in several districts, and certain additions and alterations were made to existing buildings in some districts.

A new police barrack was completed at Alipore, and two similar buildings were erected in the Chittagong Hill Tracts.

The principal work in hand during the year was the Dacca water-supply. Of works of an unimportant nature which call for notice are the removal of the bronze statue of Lord Mayo to its own site, and the completion of the construction of a sanitarium building in the Chittagong Hill Tracts.

Communications.—The works during the year were of a very ordinary nature, no new lines of road being in progress; and the only noticeable feature was the collection of a large quantity of stone metal for the purpose of gradually replacing by stone the existing brick metal on

the roads in the immediate neighbourhood of Calcutta, where the brick metal has been found unable to withstand the increased and heavy traffic. Very good progress was made during the year in erecting a suspension bridge over the Teesta river.

Local works.

The outlay on local works during the year amounted to Rs. 7,93,025, distributed as follows:—

	Rs.
Local works under the direct control of Government	4,52,768
Ditto under the control of committees or other corporations	3,40,257

The works from Local Funds under the direct control of Government are those included under the head of "provincial reserve," which consists of works done out of the funds under the following heads:—

Calcutta and Eastern Canals.	Ferries on provincial roads.
Nuddea rivers.	Staging bungalows on provincial roads.
Tolls on provincial roads.	Strand bank.

A total expenditure of Rs. 2,80,572 was incurred on the Calcutta and Eastern Canals during the year. The income derived from tolls was Rs. 4,44,044, thus showing a net surplus revenue of Rs. 1,63,472. There has been a small decrease in the income of these canals as compared with the previous year, and the chief cause may be ascribed to a portion of the Circular Canal not being open for traffic throughout the year, as the work of excavation of silt was not entirely completed until July 1876.

The principal work done on the Calcutta Canals was excavation of silt; and although the work was satisfactorily completed and the canal was deepened throughout to about one foot below the level of the Chitpore lock-sill, yet unfortunately marked signs of further silting have become apparent since the opening of the canal for traffic in July 1876. Defects having been discovered in the girders of the Zeerut bridge, over the canal on the road to Alipore, the work of remedying the same was entrusted to, and was satisfactorily done by, Messrs. Marillier and Edwards. Four new small lock-gates were fitted in the Chitpore lock, and certain special repairs were executed to the two large outer gates thereof.

The outlay on the Nuddea rivers during the year amounted to Rs. 75,782, and the revenue realized was Rs. 2,54,590, showing a net revenue of Rs. 1,79,208, being Rs. 36,366 more than in the previous year. The operations of the year on these rivers were of the ordinary character. The Jellinghee river was kept in a navigable state throughout the year. Since the year 1848-49 this is the only year that the Jellinghee and Bhagiruthee rivers were both open to traffic.

The receipts from tolls on provincial lines of communications were Rs. 12,989: the cost of maintenance was Rs. 1,834, showing a net revenue of Rs. 11,155.

The net revenue derived from ferries amounted to Rs. 65,276, against Rs. 36,766 in the previous year, and the expenditure incurred during the year was Rs. 25,164,—thus showing a net revenue of Rs. 40,112.

The cost of maintaining the staging bungalows on provincial roads amounted to Rs. 16,652; while the receipts from fees from travellers only reached Rs. 11,592.

The outlay incurred in the maintenance of the Strand road and the Eden Gardens amounted to Rs. 52,764, while the receipts from the "Strand Bank Fund" were Rs. 59,202.

Of the local works under the control of committees and corporate bodies the most important are—

District Road Fund works.
Chittagong port works.
Nizamut works at Moorshedabad.

District works.—The total outlay on district works during the year amounted to Rs. 23,52,798, that on Chittagong port works Rs. 14,814, and Rs. 47,732 on the Nizamut works at Moorshedabad.

District Road Funds. District Road Funds are, as usual, administered by committees who are nominated by Government, and the entire management of the funds and works is in the hands of the district road-cess committees.

The works executed under the management of the committees have been chiefly the maintenance and repair of existing roads. Several unmetalled roads have been metalled, and new roads have also been opened out in many districts.

Liberal grants appear to have been made by many committees for the repair of village roads; and in instances the repairs were entrusted to the zemindars, and were satisfactorily performed.

The wrought iron work for a jetty in the port of Chittagong was received from England, and is in store at Calcutta. The stone facing of the embankment protecting the light-beacons at Norman's Point was duly completed, but the whole of it was washed away by the cyclone-wave of the 31st October 1876. Measures were, however, taken for their temporary protection.

One hundred feet extension of the timber revetment and repairs to the old portion of the same of the light-house at Kootubdea Island were completed, but it was entirely washed away by the cyclone-wave, which also destroyed the Light Superintendent's house. A line of timber revetment parallel to the direction of the south-west monsoon was commenced and fairly pushed on, and a temporary bungalow for the Superintendent was put in hand.

Nizamut works. Nothing of importance as regards Nizamut works was undertaken during the year.

Works were carried out in the Zoological Gardens at Alipore by the agency of the Public Works Department from the funds supplied by the committee of management. The expenditure incurred during the year amounted to Rs. 1,21,188.

The statements in Appendix (B1 and 2) show the expenditure on capital and maintenance establishment of the various great works and classes of works, and the financial results of the works classed as reproductive.

Irrigation Works.

THE outlay of the department during the year was as follows:—

						Rs.
Charged to capital	extraordinary	32,80,854
Ditto	ordinary	1,11,935
Total capital						33,92,789
Charged to revenue	5,97,960
Ditto	ordinary agricultural works	4,21,090
Grand total extraordinary and ordinary						44,11,839

In addition to the above amount, there was an outlay of Rs. 2,92,734 on tuccavee works and repairs.

The works on account of which the foregoing sums were expended were, as in previous years, comprised in four circles of superintendence, and the following is a brief account of the operations in each circle.

ORISSA CIRCLE.

These important works were maintained in good order throughout the year. The floods were not of exceptional severity, and no damage of consequence was sustained.

Naraj, Mahanuddy, and
Kutjooree weirs.

No addition has been made to these works, which were maintained in good working order during the year. The important protective embankment in connection with the Toldunda canal along the right bank of the rivers Mahanuddy and Suk-pyka has been completed.

Toldunda canal and dis-
tributaries.

The break in the continuity of this canal has been removed by the closing of the branch Kutjooree. An additional four miles of length has thus been added to the canal, and the area irrigable has been more than doubled.

From the completed portion of this canal, 15 miles in length, seven main distributary channels with 37 branches take off, and are capable of irrigating about 17,590 acres. From the additional four miles of canal set free for irrigation by the closing of the branch Kutjooree three distributary channels lead off water for about 26,610 acres more. The works of these three distributaries were nearly three-fourths completed by the end of the year; but it was confidently expected that irrigation for the above acreage would be available by the 15th

Matchgaon canal distri-
butaries.

of July 1877. It is anticipated that this closing of the branch Kutjooree at its head near Singarpore, where the Matchgaon crosses it, will, by improving the outfall, benefit the canal drainage and the drainage of the country generally.

The cocoanut-trees and some of the areca-palms, as well as the oilnut-trees (poolung) along the canal banks, are beginning to bear fruit. By judicious management an income, increasing annually for some time to come, should be derived from these plantations. New trees are regularly planted as funds become available.

Plantations—Toldunda and Matchgaon canals.

The earthwork of this canal extension is about three-fourths completed, and the first seven miles out of a total length of fifteen miles have been sufficiently advanced to allow water to be let down, to the great benefit of the people of the neighbouring villages, who for seven out of twelve months depend on shallow dirty tanks of brackish water for drinking and culinary purposes. A continuous channel has been cut to the terminus of the canal at Jumboo, to provide a supply of fresh water for the workmen employed there. Generally the progress that was expected has not been made in the earthwork, owing to an unusual and heavy fall of rain during the working season and frequent outbreaks of cholera.

Kendrapara canal extension.

The lock and regulating weirs at Marsaghai have been completed, and the former is open to traffic.

The enlargement of the old embankment, which formed the only, and a rather precarious, protection to the town of Cuttack from the floods of the Mahanuddy and Kutjooree rivers on the west side of the town, has been satisfactorily completed. The revetment which protects Cuttack on the side next the Kutjooree was uninjured by the floods of 1876, but in some places the pitching used for strengthening the footing of the wall was carried away. The repairs to this work, as well as to the corresponding, but much less important, revetment on the north side of the city, next the Mahanuddy, have been executed.

Cuttack protective works.

A sufficient depth of water has been maintained between Cuttack and the entrances to the different canals, and laden boats have found no difficulty in traversing the river between Cuttack and Naraje, a distance of 12 miles up stream. In fact the navigable state of the river above the Mahanuddy weir was as good as in previous years.

State of the river Mahanuddy above Cuttack.

The condition of the harbour is generally good; but the gradual extension northward, and the inward trend of Point Reddie, cause some anxiety. If timely measures, which involve no very extensive works, be adopted, it is not likely that the harbour will in any way deteriorate.

False Point Harbour and works.

The new telegraph-office at Jumboo is said to be half finished. Its construction was, however, retarded by want of material, especially good bricks, which are not procurable from the salt soil of the neighbouring country.

The shoal which obstructed the passage through the Ramchunder Gullia channel has been deepened, but some expenditure will have to

be annually incurred to maintain a proper depth at this point. For native boats carrying rice, &c., from the southern districts of Cuttack and Pooree to the harbour station of Jumboo this channel affords the shortest, and at times the only safe, means of communication. Some further improvements in the way of cutting off sharp bends and clearing snags, &c., are in progress.

Various internal repairs to the light-house and its out buildings, of a heavier nature than usual, are now being undertaken. Although the locality is never likely to prove very salubrious, the place may be made less unhealthy by filling up the adjacent swamps, which are a fertile source of fever. The Superintending Engineer proposes that a sum of Rs. 3,000 be annually expended up to a limit of Rs. 13,000 in carrying out this work.

By the flood in the Kutjooree on the 22nd July 1876, which reached 80·75 plus mean sea datum, 104 breaches were made in the river embankments within its influence, and the necessary repairs were effected at an expenditure of Rs. 25,961. The Pooree district was the sufferer, and remains to this day as entirely at the mercy of the Mahanuddy flood as it ever was.

River embankments. No works of consequence were executed in this canal.

A few regulating falls and some minor branch channels have been constructed from these distributaries; but their liability to be breached annually by the floods of the rivers Beropa, Chota and Burra Gangootee, Kemereah, and Brahminee, is a most serious evil.

Two useful drainage cuts have been made in connection with these distributaries; but very much remains to be done in the way of removing bunds, which the people claim a right to throw across the natural courses of drainage for fishing and other purposes, in that part of the country. Legal steps are being taken for the permanent removal of these obstructions.

This canal, which is almost forty miles in length, is virtually completed. The first two reaches were taken over from the contractors, Messrs. Stoney & Co., on the 11th May 1876, and the third reach on the 13th January of the current year. The fourth and last reach will be accepted as complete whenever the small balance of earthwork in the bottoming up of the canal is removed.

Although no part of the works has yet been taken over from the contractors, the canal has for some time past been open for traffic as far as the town of Kendrapara. It is probable that the whole length of the canal will be open for traffic by November or December 1877. The immediate purpose of this canal, which was originally intended for a large distributary of the Kendrapara canal, is to establish and maintain direct water communication between Cuttack and the port of Chandballee on the river Byturnee; but it will be of little practical use for irrigation until branch channels and head-sluiques are constructed.

This canal was closed for the usual repairs from the 20th April to the 15th May 1876. Large quantities of silt were removed from its bed. A vigorous attempt to prevent the obstructive growth of weeds was made all through the dry months. It was entirely successful, but the expense considerable. The work of weed-clearing has been given out to contractors, who are paid at Re. 1 to Rs. 4 per mile per diem, according to the growth and denseness of the vegetation. A machine for cutting weeds has been constructed from designs by the Executive Engineer, Workshop Division, but it has not answered its purpose effectively. The distributaries have been maintained in good working order.

The body of this weir has been completed, together with the north and south abutments, but except the parapets.

Brahminee weir.

The masonry works of this weir have been completed, but the bridge and large shutters have not been fixed.

Pattia weir.

The head-lock and head-sluice at Jokodia, and the head-lock at Rorya, have been completed. Beyond some earth-work in the catch-drain, and further deepening of its bed, no work was done in this canal which is considered as finished. The iron work of the bridge, which carries the Calcutta road over the canal, has also been completed. Syphons Nos. 4, 6, and 7, have been finished, but the banks have to be raised to the full height. This section of the High Level Canal has not yet been formally declared open for navigation, as the shutters for regulating the height of water in the rivers Brahminee, Pattia, and Byturnee are under construction. The depth of water, though variable, sufficed however for a certain amount of country traffic.

Byturnee weir and Burha weir.

The masonry of these two works, with the exception of the breast-wall and part of the south abutment, has been finished.

The earthwork on this section of the High Level Canal has been completed throughout its whole extent, from the river Byturnee to the river Salindee. The masonry works as far as the Kopali aqueduct, on the 13½ mile, have been sufficiently advanced for the admission of water. The Tickora head-sluice and head-lock, the Rebboo aqueduct, and syphons Nos. 1 and 3, have been finished; the masonry of the bridge which is to carry the Calcutta road over the canal is ready, and the iron work is being put together in the Cuttack Workshops. No further progress has been made with the Kopali aqueduct, which remains in abeyance until the question of the further extension of the High Level Canal is disposed of. Like the second range, and for the same causes, this section of the canal has not been formally opened for public traffic; but it is gradually being taken advantage of by boats conveying local produce. Neither regulating head-sluices nor distributaries have yet been commenced on either of these two ranges of the High Level Canal.

High Level Canal, Range No. 3.

SOUTH-WEST CIRCLE.

The whole expenditure under the head "capital extraordinary" was incurred in connection with the Midnapore series of canals.

The principal works in progress on the Main Canal were the extension and lockage of the second range, the re-construction of a lock at Lutchmutpore, 8 miles from the canal head, and the clearance of silt from Range I.

Main Canal.

On the first-named work an allotment of Rs. 1,00,000 was expended in the year. The manufacture of bricks and the collection of materials were vigorously pushed on.

The excavation of the temporary diversion at the Damooda end, with a view to the construction of the Kooltapara lock in the line of the canal without obstructing traffic, was commenced during the year; and although a heavy task, it was opened early in January and work was commenced on the foundation pit of the lock itself. The excavation of the Katapooker lock-pit at the Roopnarain end was also taken up, and by the end of the year both the lock-pits were nearly ready for the concrete to be laid down. The extension of the canal at the Roopnarain end was also commenced. The work was made over to a contractor, who imported labour from Hidgellee, and was expected to be ready early in the monsoon. If the progress on these works continues as satisfactory as hitherto, it is possible that the locks may be opened out by January 1878.

The construction of distributaries under the Midnapore weir was in progress during the year. The total length of distributaries in working order under both weirs was increased from 227½ to 251½ miles, and the area commanded from 138,050 to 148,200 acres. The lockage of Narainghur (No. 1) distributary was completed, and 16½ miles of distributary were thus rendered navigable for small boats. The locks are each 55 feet by 12 feet, with a depth of four feet of water on the sills, so that they are passable by boats of small size only.

Distributaries.

The Patooa khal drainage scheme for diverting the flood-water of the Patooa khal was almost finished during the year. A small quantity of masonry work of the syphon for carrying the Authra distributary under the drainage cut is expected to be finished before the irrigating season.

Drainage works.

On the 5th September 1876 this lock, which for some little time previously had been showing signs of failure, finally collapsed,—the lower bay, and about one-fourth of the chamber, falling in. Fortunately traffic through the lock had been stopped two days before. The failure was due principally to the nature of the soil on which the lock was built, and which was found to be a quicksand full of springs. The work of re-construction was quickly taken in hand, but owing to the enormous quantity of spring-water encountered the progress at the commencement was necessarily slow. By the close of the year the *débris* of the fallen part of the old lock had been cleared away, and water-tight sheet-piling had been driven round the new portions of the lock. The work has since progressed rapidly, and it was expected that the

Re-construction of the Lutchmutpore lock.

lock would be rebuilt by the end of June 1877 and opened to traffic a month later.

The other important work was the clearance of silt from Range Clearance of silt in No. I, between the Hooghly and Damooda rivers. Range I. The canal was closed for traffic from the 1st February 1877. The work was let out to a contractor, who engaged to complete it by the 20th April, but who, having underestimated his difficulties, has incurred a heavy pecuniary loss by the contract. It was expected that the canal would again be opened to traffic early in June. During the time it was closed porte-valets were fixed to both the upper and lower gates of the Bansberria lock, so as to exclude the silty water of the Damooda from the canal and to admit the less silty water of the Hooghly.

DRAINAGE SCHEMES.

The operations of the Revenue Department for the apportionment of the expenditure on these works to the lands benefited are approaching completion. Dancuni drainage works.

A project for the reclamation of the Bullee, Dathbhanga, and Boyra swamps in the Hooghly and 24-Pergunnahs districts is under consideration, and others for the drainage of extensive bheels in the Hooghly district were in course of preparation during the year.

SONE CIRCLE.

This weir has been kept in a state of efficiency, although at one time some difficulty was experienced from a considerable deposit of silt in front of the Dehree head-lock of the Main Western Canal. Vigorous dredging operations—Fouracre's excavator being used in the absence of a more suitable machine—and judicious working of the shutters, however, prevented this evil from assuming any serious proportions. During the very heavy flood which occurred on the 7th July 1876 this weir sustained no injury; but there was a considerable scour round some of the telegraph piers, which were finished in May of last year. Several boatloads of stone were sunk near the threatened piers, and danger to the work was averted. Sone weir.

In the Eastern Sone division the Eastern Main Canal was kept dry during the year, the whole time being devoted to the completion of the canal prism to full section. Considerable difficulty was experienced in the course of this work from springs. A very large quantity of silt was excavated from this canal, chiefly from the lock and sluice channels, under two or more feet of water. Labour for this work was not easily procurable. Eastern Main Canal.

It was originally contemplated that the masonry works of this canal should be completed by the 1st June 1876. Patna canal. By successive alterations, modifications, and extensions of the contract time, the date now fixed for their final completion is the 1st June 1877. The brick masonry was finished by the 1st January of the present year; some trifling work, such as building in the sockets of bolts, bricking up round the counterfort stones, &c.,

only remaining to be done. The earthwork and the bridges on the canal are almost completed.

Out of a total length of 185 miles of distributaries taking off from the Eastern, Main, and Patna canals, 178 miles have been opened out and 48 turfed, but no single distributary is yet fully completed.

The first five miles of the Main Western Canal were completely bottomed up, and a great portion of the extra width of 80 feet, which had not been taken in hand in previous years, was excavated.

The Arrah canal, as far as lock 12 in the 56th mile, has been completed and opened for traffic. The outfall lock was during the year finished, with the exception of a small quantity of cut stone and masonry. The gates and moveable dam are in a forward state, and were expected to have been fixed before the rains.

The Doomraon and Beheea branch canals have been completed throughout their whole length. Out of 508 miles of distributaries in the Arrah division 362½ miles have been completed and 112 miles are under construction.

The Buxar canal was all but finished as regards earthwork, and little dressing or turfing remains to be done except from the 7th to the 18th miles, on which not much progress has been made. The masonry of the waste weirs has been nearly completed. Considerable progress has been made with the Thora aqueduct, the arching having been commenced by the close of the year. The foundations of the Buxar canal railway bridge have been laid, and the work is being pushed on rapidly. The foundations of the locks are being laid; but difficulty has been experienced, specially at Nos. 1, 2, 5, and 7, pumping having been found necessary.

The Chowsa branch canal and Bhojpore distributary are nearly completed; 9 falls and 15 bridges on the former still remain to be completed. But for the heavy rains of October last these works would have been opened by the end of the present year, as the manufacture of bricks was very seriously retarded by the weather. Four inspection houses on the Chowsa canal have been finished. Owing to the reduction in the budget grant, work on the Gurra Chowbey branch canal, and on the four left distributaries of the Chowsa branch canal, commenced at the end of the previous year, was abandoned, and not resumed except for the completion of the head-sluice and a few chains of earthwork at the head of each.

GUNDUK CIRCLE.

The following projects were submitted during the year:—

The lower Hurha project, providing for the irrigation of 379 square miles of country in the Chumparun district at an estimated cost of Rs. 17,83,262.

Lower Hurha project.

The Ramnuggar projects, consisting of three schemes for irrigation from the Pundye, Bulour, and Hurha nullahs. The area commanded, and estimated cost of each scheme, are as follow :—

					Area in square miles.	Estimated cost. Rs.
Pundye	89.65	1,65,038
Bulour	35.20	1,37,183
Hurha	44.96	1,60,815

The Teeur project, providing for the irrigation of 36.30 square miles at an estimated cost of Rs. 69,243. The greater part of the land to be benefited belongs to Baboo Doorga Prosad Singh, who has agreed to supply funds for carrying out the works.

The Bagmutti irrigation and navigation project is a modification of the inundation canal scheme originally proposed for the irrigation of 600 square miles in the Tirhoot district. In the present scheme a canal has been provided for a part of the Chumparun district also. The total estimated cost of the project is Rs. 47,67,348.

The Gunduki head project was initiated during the year in consequence of the threatened extensive failure of the rice and rubbee crops in the Sarun district. At a total estimated cost of Rs. 5,86,628 the project provided for throwing into the principal natural water-courses of the district a stream from the river Gunduk varying from 2,000 cubic feet in the khureef to about 800 cubic feet in the rubbee.

Projects under preparation.

The projects that remained in course of preparation were—

- The irrigation and navigation scheme for Sarun and part of Goruckpore.—The preliminary surveys were completed.
- Kumla project, the field work for which was also completed.
- Ganges and Gogra embankment project.—The plans and estimates for one-half of the scheme were ready.
- Bazetpore embankment.—The necessary surveys for a project for the restoration of this embankment were put in hand at the close of the year.

The principal works undertaken on the Gunduk and Toorkee embankments were the construction of drainage and irrigation sluices, retired bunds, river protective works, drainage cuts, and inspection bungalows. The bungalows and a few of the sluices were not completed by the end of the year. The total expenditure on tuccavee works, exclusive of establishment, tools and plant, was Rs. 1,38,088.

REVENUE.

The canals paying revenue during the year were the Orissa canals, the Midnapore canal, the Hidgellee tidal canal, and the Sone canals.

The area irrigated was 30,382 acres, and the assessments amounted to Rs. 41,789, compared with 18,409 acres and Rs. 24,021 in 1875-76, while the navigation tolls amounted to Rs. 24,004, as against Rs. 16,377 of the previous year. The collections, inclusive of old arrears, were, for water-rates Rs. 40,378, navigation tolls Rs. 22,881, and miscellaneous receipts Rs. 11,298, aggregating Rs. 74,557, against the total of Rs. 45,490 of the previous year. The expenditure chargeable against revenue amounted, on account of maintenance and repairs, inclusive of establishment charges and plant, to Rs. 1,83,821, and the cost of the revenue establishments was Rs. 30,840, against Rs. 1,76,180 and Rs. 31,438 respectively of the previous year. The result was a deficiency in net revenue, or excess of working expenses over revenue, amounting to Rs. 1,40,104, compared with Rs. 1,62,128 of the previous year.

The area irrigated was 32,681 acres, against 55,995 acres in 1875-76 and 72,318 in 1874-75, the successive falling off being due to copious and timely rainfall. The assessments on account of water-rates amounted to Rs. 49,156, against Rs. 87,289 of the previous year. The amounts collected and credited to revenue were, for water-rates Rs. 61,460, navigation tolls Rs. 67,651, and miscellaneous receipts Rs. 7,876, aggregating Rs. 1,36,987, against Rs. 1,11,109 of the previous year. The expenditure debited to revenue was as follows:—

	Rs.
Maintenance and repairs, inclusive of establishment and plant ...	1,46,885
Revenue and navigation establishments ...	24,394
Total ...	<u>1,71,279</u>

the deficit in net revenue, or excess of working expenses over revenue, being Rs. 34,292, as compared with Rs. 56,290 of the previous year.

The canal being for navigation only, the revenue was derived from tollage, with the exception of a small sum from miscellaneous sources, and amounted to Rs. 45,036, as compared with Rs. 22,935 of 1875-76. The working expenses amounted to Rs. 12,430, and the result was a surplus revenue of Rs. 32,606, against a deficit of Rs. 16,103 of 1875-76.

These canals were brought into operation during 1875-76, in which year the rainfall in Behar was very low, being 39·80 inches only, and the consequence was a general rush for canal water, and the area irrigated was 75,565 acres; but water was given without proper distributaries or village channels. During 1876-77 regular water-rate rules were framed in accordance with the new Irrigation Act which was passed in 1876, and water was given under systematic arrangements. The area irrigated was, however, 13,784 acres only, the falling off being due to timely rainfall.

The Main Western and the Arrah canals were for the first time opened for navigation in August 1876, but the traffic was mostly confined to the carriage of Government stores and material. The private traffic will, it is expected, increase rapidly. The collections of the year amounted to Rs. 73,180, viz. Rs. 59,761 for water-rates,

Rs. 4,852 for tollage, and Rs. 8,567 for miscellaneous receipts ; while the amount credited in 1875-76 was Rs. 50,900. The expenditure charged to revenue amounted to Rs. 1,99,590, of which Rs. 1,77,843 was expended on maintenance and repairs, and Rs. 21,747 was the cost of the revenue and navigation establishments. The deficiency in net revenue was Rs. 1,26,410, against Rs. 64,535 of the previous year.

Railways.

THE length of the main line of this railway on which rates and fares are calculated is 1,279·58 miles, of which 410·58 are double. The length, with sidings, is 1,972·62. The total capital expenditure was Rs. 28,63,12,734, which gives an expenditure per mile of Rs. 2,23,757 upon the paying length (1,279·58 miles) of the line, and Rs. 1,45,143 upon the total length (1,972·62 miles). During the year—

		Rs.	A.	P.
The capital expenditure amounted to	...	6,60,479	1	8
„ credits to capital	„ ...	3,09,475	8	6
Balance to capital expenditure	...	3,51,003	9	2

In addition to this capital expenditure, a sum of Rs. 4,549-14-11 was spent upon minor works of construction at the cost of revenue.

The engineering operations were of little importance. An entirely new design for the re-construction of the Howrah terminus was prepared under the Agent's supervision and submitted to the Board of Directors. Works comprising large additions to the accommodation at the stations Allahabad, Cawnpore, Allyghur, and alterations at Bally, Mokameh, and Dinapore, were sanctioned by the Board of Directors and the Government of India. The outlay involved is—

Capital.	Revenue.	Total.
Rs.	Rs.	Rs.
6,93,568	90,409	7,83,977

The Agent and Chief Engineer have received instructions from the Board of Directors to devote special attention to the improvement of the permanent-way. A joint report, dated 15th August 1876, by the Agent and Captain Wallace, R.E., proposing certain measures, has met with the full approval of the Government of India and the Board of Directors.

	1875.	1876.
The cost of maintenance per mile was	... Rs. 320	439
The number of sleepers renewed	... No. 154,063	225,336
Ditto of rails	... „ 24·81	24·53

The engines have been maintained in good order. The average daily train mileage run by the engines was 42 miles during the first half of the year and 42½ in the second half. The average daily mileage run in the corresponding periods of 1875 was 39 and 35 respectively.

The consumption of coal for passengers' engines was 40·29 pounds per train mile and 45·17 pounds for goods engines:—

			Engines.	
			Passenger.	Goods.
Consumption of coal.	In 1875	...	40·75	50·625
	„ 1876	...	40·29	45·175

The granting of premia to engine-drivers was found to conduce to economy in the use of fuel: thus—

			1875.	1876.
The saving of coal amounted to	Tons	58,458	64,492
„ money value of the saving	Rs.	1,75,374	1,61,231
„ premia paid to drivers	„	2,858	3,898
„ cost of coal per ton	„	3	2½

The Kurhurballee and Serampore collieries yielded—

				Tons.
In 1875	161,504
„ 1876	238,848
Increase				77,344

The whole of the rolling-stock is being maintained in a satisfactory manner. The working expenses per train mile amounted to—

3·06 annas in 1875.
2·92 „ in 1876.
0·14 „ decrease.

The vehicles repaired and turned out—

				Rs.
In 1875 were 187 in number, at a cost of	1,56,687
„ 1876 „ 314 „ „ „	2,90,245

The lines of telegraph have been efficiently maintained. An agreement for the transfer of the maintenance of the main line telegraph to Government was concluded. The number of messages sent—

				Rs.
In 1875 were 34,096, yielding	50,945
„ 1876 „ 35,773 „ „ „	53,754

Accidents.

Two accidents occurred during the year. On the 13th January, at Gidhour, a horse-box containing horses, whilst being shunted, escaped from the shunters, and, running down the incline for four miles in the direction of Jamui,

came into collision with the advancing mail train. The train, composed of engine, brake-van, and 13 carriages, was, with the exception of the two rear vehicles, thrown off the line. The injury done was—

Killed.	Shaken.	Smashed.	Greatly injured.
A native fireman. Brakeman. Syce. 3 horses.	Passengers.	Horse-box. Brake-van. 2 carriages.	5 carriages.

On the 10th August, at Assensole, an attempt was made by some malicious persons to throw the down mail train off the line by taking out of the road a rail 23 feet long. A light engine, travelling slowly in advance of the mail train, was thrown off without injury, and the design of upsetting the mail train thus frustrated.

No more appointments of natives to the post of guard have been made, but the number of native drivers has been increased.

Native guards and drivers.

When a native driver is employed, a European guard is attached to the train.

The cost of engine-men, firemen, and all labour connected with running the engines amounted to Rs. 9,58,132 for 7,450,469 miles travelled over by the engines, as against Rs. 10,10,704 for 6,583,617 miles travelled in 1875. The decrease is due to the introduction of native drivers in place of Europeans, and the scheme of employing natives has thus far been found to work satisfactorily.

Exclusive of the flotilla, the total earnings amounted to Rs. 3,27,69,142, the expenditure to Rs. 1,11,25,137, and the balance to Rs. 2,16,44,005, which yields a percentage of 7.3 upon the total capital guaranteed. Details are given in the table below :—

Financial results.

Total	596,590	810,780	214,190	204,119	199,146	5,973

The gross revenue expenditure exceeds that of 1875 by Rs. 6,75,060, of which the sum of Rs. 6,55,829 was due to maintenance of way, works, and stations. The explanation of this increase is given under the head "Maintenance." The decrease in the Telegraph Department is due to an abnormal expenditure in the half-year ending June 1875 for posts.

Abstract of Working Expenses during the years 1875 and 1876.

HEADS OF CHARGES.					Expenses in 1875.	Expenses in 1876.	Increase in 1876.	Decrease in 1876.
					Rs.	Rs.	Rs.	Rs.
Maintenance	24,70,204	31,26,032	6,55,828
Locomotive	28,50,868	26,94,287	1,56,581
Carriage and wagon	10,59,889	11,46,280	86,391
Traffic	24,24,689	24,05,571	19,118
General charges	13,86,310	13,98,978	12,668
Steam boat	76,758	55,980	20,778
Special and miscellaneous	2,37,838	3,53,987	1,16,649
Total	1,05,06,065	1,11,81,115	6,75,060

The details of the steamer traffic are given below :—

Steamer Traffic.

YEARS.								Earnings.	Expenses.	Profit.
								Rs.	Rs.	Rs.
1872	1,39,567	91,527	48,040
1873	1,42,805	80,604	62,201
1874	1,69,216	1,04,726	64,490
1875	88,919	76,753	12,161
1876	69,228	55,978	13,250

The rate for *food-grains*, which had been carried all distances over 300 miles at 0·22 pies per maund per mile, was reduced to 0·20 pies per maund per mile for distances over 500 miles.

The rate for salt, which had been carried all distances over 150 miles at 0·25 pies per maund per mile, was reduced as follows :—

		Pies.
Over 300 miles	0·22 per maund per mile.
„ 500 „	0·20 „ „

A special rate for *food-grain train-loads* from Cawnpore and stations westward of it to Howrah was fixed on 1st January 1876 at 0·187 pie per maund per mile, and withdrawn on 1st July 1876. The same concession was granted to oil-seeds and saltpetre for Howrah.

The special class rates, minimum 220 maunds, are $\frac{1}{4}$ pie per maund per mile for distances over 150 miles.

The rate for coal for foreign and State railways was $\frac{1}{4}$ pie per maund per mile; in the case of the Oudh and Rohilkhund State Railway the rate was $\frac{1}{4}$ pie per maund per mile, subject to a repayment of 10 per cent. when the amount carried equalled or exceeded 6,000 tons.

The length of line on which rates and fares are calculated is 223·57 miles, of which none are double. The length, with sidings, is 245·50 miles. The capital expenditure was Rs. 3,68,10,578, which gives an expenditure per mile of Rs. 1,64,516 upon the paying length of 223·57 miles, and of 1,49,941 upon the total length of 245·50 miles. During the year the capital expenditure amounted to Rs. 14,319-6-11, and the expenditure on credits to capital to Rs. 37,360-9-4, the balance added to capital being thus Rs. 23,041-2-5.

On new minor works there was an expenditure of Rs. 34-11-0.

The engineering operations were of little importance. Alterations and improvements to the station of Jubbulpore have been sanctioned

by the Board of Directors and the Government of India, involving a capital outlay of Rs. 65,703.

The engines were maintained in good order. The average daily mileage run by the engines was 44 miles in the first half of the year, and 43·5 in the second, against 39 miles and 35 miles in the previous year.

The consumption of coal per train mile was 36·69lb for passenger and 43·24lb for goods traffic.

The rolling-stock is being maintained in a satisfactory manner. The working expenses for repairs and oiling per train mile amounted to 3·5 annas.

In future the vehicle, not the train, mileage will be adopted as a basis for apportioning the charges for repairs between the main and Jubbulpore lines.

The whole of the covered goods wagons (634 in number) will be furnished with larger axles to support 10-ton instead of 6-ton loads.

On the 28th October 1876, near Jubbulpore, the down mail train was thrown off the rails; several passengers were injured. Two gentlemen preferred claims which were settled amicably; a third has put forward a claim for Rs. 5,000, which is under arbitration. The accident was due to the bad state of the road.

The total expenses of the year amounted to Rs. 26,74,576, and the total earnings to Rs. 13,09,508; balance profit Rs. 13,65,068, which gives upon the total capital guaranteed a percentage of 3·9.

Abstract of Earnings, Expenses, and Profits.

YEARS.	Average miles open.	Earnings.	Expenses.	Profits.	PER MILE OPEN.			Percentage of working expenses on earnings.	Capital on which guarantee is paid, or total capital paid up.	Rate per cent. of profits on total capital paid up.
					Earnings.	Expenses.	Profits.

The increase in maintenance and renewals of permanent-way is due to the greater consumption of permanent-way materials. The increase in the Locomotive Department is due to the increase of the train mileage. The increase in Carriage and Wagon Department is due to the greater number of carriages which have been renewed.

The length of this line on which rates and fares are calculated is 157·75 miles. The length with sidings is 196·34 miles. As mentioned in the report on the progress and administration of the Eastern Bengal Railway for 1875, the length of this line will not be increased. The total capital expenditure was Rs. 3,20,75,661, which gives an expenditure per mile of Rs. 2,03,332 upon the paying length (157·75 miles) of the line and of Rs. 1,63,376 upon the total length of 196·34 miles. During the year the capital expenditure amounted to Rs. 3,23,923, and the credit to capital to Rs. 25,522, leaving a balance to capital expenditure of Rs. 2,98,401.

In addition to this capital expenditure there was an expenditure of Rs. 2,330 upon new minor works. Engineering operations have been confined to the erection of the temporary terminus at Goalundo. The whole of the building and traffic lines connecting the station with the river frontage and the new *Khata Khall* were completed in July 1876. At Gorai station the encroachment of the river necessitated the shifting of the lines, and the corrugated iron goods-shed had to be pulled down. The floods were very light: no serious damage was done to any part of the line. At 134 miles, where the erosion in 1875 was so serious as to threaten the safety of the line, the cutting in 1876 was only 58 yards.

The way and works have been efficiently maintained. The renewals of sleepers cost Rs. 22,023, and the quantity of ballast put in was 262,000 c. f. The list of engineering stores has been compared with the quantities of material found by actual counting, and corrected accordingly.

The bridges are in good order, and a sum of Rs. 16,831 has been expended on the works at the new junction, Goalundo.

The engines have been maintained in good order. The average daily train mileage run by the engines was slightly less than in 1875.

The consumption of coal in pounds per train mile was slightly more than in the previous year.

			1875.	1876.	Difference.

Total ...	11,70,838	13,09,507	1,38,669

The condition of the rolling-stock has not been materially improved.
Carriage and Wagon Department.

There have been rebuilt and turned out—

- 1 first class carriage.
- 1 composite „
- 2 third class carriages.
- 2 „ „ „ (constructed out of open wagons).

Ten covered goods wagons have to be rebuilt at the cost of the Fire Insurance Fund; an experimental wooden cylindrical wagon has likewise to be built.

In anticipation of the opening of the Northern Bengal (State) Railway, an indent for 50 rectangular iron wagons has been sanctioned, and proposals submitted for—

- 25 third class carriages, and
- 5 brake-vans.

The negotiations for the transfer of the Company's telegraph to the Government of India have been in abeyance. It is understood that the Director-General of Telegraphs is about to propose a modification of the original scheme. There have been no accidents of a serious nature.

Telegraph.

Accidents.

The Port Trust Commissioners' line from Sealdah Station, *via* Circular Road and Bagh Bazar, to the Strand, was opened in November 1876, and carried 1,835 tons of goods, paying a freight of Rs. 586.

The total earnings and expenses for four years are given in the following table:—

Abstract of Earnings, Expenses, and Profits.

YEARS.	Miles open.	Earnings.	Expenses.	Profits.	PER MILE OPEN.			Per cent. of working expenses.	Capital on which ratee is paid, or total capital paid up.	Per cent. of profits on total capital paid up.
					Earnings.	Expenses.	Profits.			
	No.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.		Rs.	
1873	156	30,84,504	15,13,798	15,70,706	10,772	9,703	10,069	49.1	3,10,09,707	5.8
1874	168½	35,64,841	18,60,141	17,04,700	22,526	11,754	10,772	50.4	2,92,45,767	3.9
1875	158	29,34,328	18,23,908	11,10,420	18,572	11,548	7,028	62.2	2,92,67,585	6.2
1876	168½	39,01,337	14,41,286	18,60,091	20,862	9,108	11,754	43.7	3,37,37,040	5.4

The percentage on the total earnings (Rs. 33,01,377) was 35.8 for passenger traffic and 59.8 for goods traffic.

	No. of passengers.	Receipts. Rs.
In 1875 (exclusive of season tickets)	1,710,236	10,65,394
„ 1876	1,738,306	10,55,346
Difference ...	+ 28,070	— 10,048

Fourth class return tickets at a reduced rate were issued in October 1875. The tendency of this measure appears to be to draw passengers from the higher classes.

The following table shows the progress made in the more important items of goods traffic:—

YEARS.	Jute.		Seeds.		Rice.		Tobacco.		Salt.	
	Tons.	Rs.	Tons.	Rs.	Tons.	Rs.	Tons.	Rs.	Tons.	Rs.
1873	124,040	11,19,584	12,013	66,606	15,746	76,385	11,636	97,554	1,350	6,743
1874	112,407	11,66,691	26,460	1,48,353	101,452	6,30,079	14,531	1,29,165	3,117	15,320
1875	94,694	8,05,904	22,081	1,15,951	22,840	1,07,417	9,017	75,154	3,776	16,313
1876	144,970	12,53,505	28,608	1,46,873	15,483	79,520	11,251	89,838	15,338	73,166

According to the Port Trust Commissioners, one-half of the jute that reaches Calcutta is brought by Railway, the other half by steamers and country boats.

The railway has also to compete with the steamers and native boats for the carriage of—

Rice,
Salt, and
Various miscellaneous articles ;

the rates therefore should be as low as possible.

The results of the working of the steamer traffic during the last four years are shown as follows:—

Steamer Traffic.

YEARS.				Earnings.	Expenses.	Deficit.	Profits.
				Rs.	Rs.	Rs.	Rs.
1873	3,50,406	2,42,118	1,08,288
1874	4,27,133	3,02,147	1,24,986
1875	2,92,799	2,49,706	...	43,093
1876	3,38,570	2,40,366	98,204

The Cachar service was discontinued on 19th January 1876.

STATE RAILWAYS.

During the year 1876-77 the State Railways in the province were administered by the Director of State Railways under the Government of India. The work done on the several railways is briefly stated below.

About the close of the financial year arrangements were made for transferring the State Railways in Bengal to the local Government, but these were not finally concluded until May 1877.

The traffic of the Calcutta and South-Eastern Railway was carried on without interruption throughout the year, and the permanent-way stations, bridges, and culverts, were all maintained in working order. A supply of creosoted pine sleepers was obtained from England, and renewals to a large extent were made, although many are still remaining in line which require removal. Owing to heavy rains in the cold season very little could be done in the way of ballasting, much as it is required. Bridges and culverts and stations and staff quarters were repaired where necessary. Extensive repairs were executed on "rolling-stock," and two upper and five lower class carriages were handed over to the Eastern Bengal Railway for re-construction, as well as two engines.

There is a marked improvement in the passenger traffic, especially in the lower class of passengers, principally due to the inducements

afforded to *dhobies*, cloth merchants, and gardeners. There is a slight decrease in the goods traffic, due to dullness in the firewood trade, in consequence of the wood-cutters devoting their attention to harvesting more than to cutting wood. The rice traffic was improving towards the close of the year.

The following table gives an abstract of the merchandise traffic carried over this line during the year :—

Calcutta and South-Eastern State Railway.

HEADS OF TRAFFIC.	WEIGHT CARRIED.		Increase in 1876.	Decrease in 1876.	RECEIPTS.		Increase in 1876.	Decrease in 1876.
	1875.	1876.			1875.	1876.		
	Tons.	Tons.	Tons.	Tons.	Rs.	Rs.	Rs.	Rs.
(1) Merchandise for the public	32,095	29,962	2,133	27,809	26,156	1,653
(2) Materials for railway construction...
(3) Minerals— For the public	42	3	39	44	10	34
For railway construction	No.	No.	No.	No.
(4) Livestock	111	88	23	108	94	14
(5) Rents, demurrage, &c.	5	5

During the year the permanent-way, rolling-stock, bridges, and culverts of the Nulhattee State Railway, were all maintained in fair working order. A serious want was partially supplied in the shape of new sleepers in place of the old pressure plate ones, and dog-spikes were substituted for the old coach-screws. The screw-bolts and rivets used in fastening the fish-plates were also to a certain extent replaced by bolts and nuts of the ordinary type. A large quantity of new ballast was also spread. An important improvement was introduced in the shape of locking bolts and lever gradients for the points and crossings. Two of the bridges were severely tried by the extraordinary floods in August, and the permanent-way was raised six inches on the 9th mile in consequence of the water flooding the rails. A new goods shed at Azimgunge was completed during the year, and the construction of a new workshop and store at Nulhattee commenced.

The passenger traffic shows a decided improvement in all three classes, which proves that the introduction of the double train service and the reduction of fares were steps in the right direction. In the goods traffic, with the exception of minerals and miscellaneous, all commodities show a slight improvement. The large increase which had been anticipated in the grain traffic to famine districts was stopped by the inability of the East Indian Railway Company to take over goods from this railway, thereby causing considerable damage to the grain waiting at Nulhattee for transhipment, compensation for which had to be paid by the State line. Appended is a statement of the merchandise traffic over this line during the year.

Nulhattee State Railway.

During the year of report the temporary famine line from Tirhoot State Railway. Bazitpore to Durbhunga was made permanent, and a branch constructed from Samastipore junction to Mozufferpore. At the end of the year most of the stations and staff quarters were finished, and nothing remained to be done except fencing workshops at Samastipore and some level-crossing huts and gates. A branch line from the East Indian Railway station at Barrh to Nawada Ghât was commenced just at the close of the financial year.

As the traffic on this line during 1875 was not continuous, the line having been closed during the rainy season from June to November, a comparison of the results of 1875 and 1876 would be useless. Owing to the number of wagons required by the Engineering Department, the goods traffic could not be worked up to what it otherwise would have been; but the results were sufficiently satisfactory to cause sanguine hopes for the future success of the line. It cannot be expected that the full results will be obtained until through booking with the East Indian Railway is established. At present merchants have sometimes great difficulty in getting their goods across the river from Bazitpore to the East Indian Railway station, and many of them prefer the river route from Durbhunga and Mozufferpore, in which case transshipment of goods is unnecessary. The opening of the Barrh branch will, however, obviate this difficulty.

Appended are statements, as in the case of the Calcutta and South-Eastern and Nulhattee lines, showing abstract of merchandise traffic, mileage results, and comparative statement of traffic.

Native staff	573
Capital expended up to 31st December 1876	£371,140

During the year the embankment between Sara and Julpigoree was finished, and that of the Poradah section and Rungpore branch practically so; 127 miles of rails were laid, and a large amount of ballast collected and spread on the line. The masonry of all the bridges on the main line between Sara and Julpigoree was finished during the year with the exception of that of the bridges over the Baraloe and Atrai rivers. On the Rungpore branch the bridges were all well in hand at the close of the year, and it was expected that all would be finished before the rains with the single exception of the Ghogut bridge.

The Assam extension and Sebsaugor survey parties completed their outdoor work during the year.

There has been the usual amount of excessive fever and cholera, which seriously impeded work at the commencement of the working season.

Post Office and Telegraph.

THE following statistical information concerning the post offices in the Bengal circle during the year 1876-77 has been furnished by the Postmaster-General of Bengal.

The total number of imperial post offices and other establishments for the delivery of letters exhibited an increase of 38 offices, 221 letter-boxes, 85 rural messengers, and 20 letter-box peons, as given in the statement below :—

Appendix I.

EXISTING ON THE 31ST MARCH 1876.				EXISTING ON THE 31ST MARCH 1877.			
Post Offices.	Letter-boxes.	Rural messengers.	Letter-box peons.	Post Offices.	Letter-boxes.	Rural messengers.	Letter-box peons.
980	2,728	716	214	1,018	2,949	801	234

The following statement shows the distances over which mails were carried on the 31st March 1877, as compared with the previous year :—

DISTANCES AS RETURNED ON 31ST MARCH 1876.					DISTANCES AS RETURNED ON 31ST MARCH 1877.				
Boat and runners' lines.	Mail cart.	Sea.	Railway.	Total.	Boat and runners' lines.	Mail cart.	Sea.	Railway.	Total.
6,551½	282	2,900	1,001	10,734½	6,295½	317	2,900	1,079	10,591½

The net decrease of 256 miles in runners' lines is due partly to the transfer of lines to the district post, and partly to the closing of lines. Sea and boat lines remain unchanged. There was a nominal increase of 35 miles under the head of mail cart lines, but the increase was really caused by the establishment of a pony dāk connecting Nya Doomka with the East Indian Railway, and this has since been closed. The total distance of railway mileage in 1875-76 was 993 miles, but was erroneously shown as 1,001. The increase of 86 miles was due to the opening of the line (32 miles) between Samastipore and Mozufferpore, and the

remaining 54 miles represent the carriage of mails by trolley between Halulia and Parvatipore, on the newly constructed Northern Bengal State Railway.

There were 321 district post offices, and the total mileage of zemindari lines amounted to 10,977. The total number of peons and rural messengers amounted to 64 and 12 respectively. The transfer of the district post to the Postal Department was completed in all districts during the year.

The enumeration returns of the Postal Department gave an aggregate of a little under 29 millions (28,911,084) of letters, newspapers, packets, and parcels dealt with by the imperial Post Office in Bengal during the year 1876-77, as against 26,767,468 during 1875-76, or an increase of 8 per cent. The revenue from unpaid articles and correspondence during 1876-77 amounted to Rs. 5,62,099, against Rs. 5,32,500 during 1875-76, being an increase of 5 per cent.

The revenue derived from the sale of ordinary postage stamps during 1876-77 was Rs. 10,00,150, against Rs. 10,00,101 in the previous year. But for the lowering of the overland postage from 8 annas to 6 annas per $\frac{1}{2}$ oz., the increase would have been very considerable.

Thirty-two prosecutions were successfully instituted by the department against officers belonging to it, and 19 against the public for offences against the post office. In 1876-77 there was only one case of highway robbery, against five in the previous year.

Nine post offices were built during 1876-77,—at Bankoora. Madhupore, Parvatipore, Giridhi, Barh, Fatuha, Bakhtiyarpore, Pirpointi, and Kanchraparah.

The administrative divisions adopted for departmental purposes by the Telegraph Department render it impossible for any return to be furnished showing the working of that department in the Bengal province alone.

Telegraph Department.

The question of the establishment of a line of telegraph between Cuttack and False Point was noticed in the last year's report. The Commissioner of Orissa, the Collector of Cuttack, and three mercantile firms, entered into a joint guarantee securing the Telegraph Department against loss in working the line; but that department considered a joint guarantee insufficient, and required that each of the parties should also be held severally responsible. In view, however, of the great importance of the line, it was ultimately ordered by the Government of India that the line should be established irrespective of any guarantee, and it was accordingly opened in August 1877.

Telegraph from False Point to Cuttack.

The establishment of a line of telegraph from Dacca to Narain-gunge has been proposed. It has been shown that this line would be of considerable importance to the trade of Dacca and Eastern Bengal generally. The question is now under consideration, and will be settled as soon as the extent of the local guarantee for part of the expenses of working the line is determined.

Proposed telegraph from Dacca to Narain-gunge.

A proposal to establish a line of telegraph from Sherghotty to Gya is also under consideration.

V.—REVENUE AND FINANCE.

(a.)—Imperial Revenue and Finance.

FINANCIAL.

Imperial Service.

Statement showing the Imperial Receipts in 1876-77 as compared with 1875-76.

XVIII. Miscellaneous	8,21,957	10,01,778	1,79,821
Total	15,44,09,490	15,64,45,853	36,76,988	16,40,625
Net increase	20,36,363	

N.B.—The differences between the actuals of 1875-76 as given last year and those now entered in this statement are due to adjustments made subsequent to the close of the accounts under the authority of the Comptroller-General.

The following explanations have been furnished of the principal items of increase and decrease in imperial receipts in 1876-77 as compared with 1875-76 :—

INCREASES.

Forest, Rs. 24,127.—Larger receipts from sale of wood and bamboos.

Excise on Spirits and Drugs, Rs. 1,59,695.—Larger receipts under license and distillery fees, &c., more than covering a small decrease under sale proceeds of excise opium.

Salt, Rs. 3,54,028.—Increase under customs duty on salt and rents of warehouses, more than covering a falling off under excise duty.

Opium, Rs. 25,22,424.—The number of chests sold in 1875-76 was 45,520, against 47,240 in 1876-77, and the average selling price in 1875-76 per chest was Rs. 1,259, against Rs. 1,270-3 in 1876-77.

Stamps, Rs. 1,97,689.—Increases under the sale of court fee stamps and sale of plain paper for court fee stamps, more than covering a falling off under general stamps, fines and penalties, and miscellaneous.

Post Office, Rs. 88,098; Law and Justice, Rs. 46,407.—Transfer of recoveries on account of pauper suits from stamps to this head, and larger realizations under general fees and fines, &c.

Marine, Rs. 39,521.—Larger receipts under pilotage and dockyard services, &c., more than covering a falling off under sale proceeds of vessels, &c.

Interest, Rs. 56,202.—Increases under Calcutta Municipality and Port Trust, besides which the interest realized on the debt due from the Rajah of Keonjhar, which formerly was credited to the major head, miscellaneous, along with the principal of the debt, has now been brought here.

Miscellaneous, Rs. 1,79,821.—Increases under unclaimed bills of exchange and unclaimed deposits, both of more than three years' standing, more than covering a decrease under miscellaneous receipts.

DECREASES.

Land Revenue, Rs. 11,95,711.—This decrease of nearly 12 lakhs is confined chiefly to ordinary revenue, and is explained by the fact that a sum of nearly 13 lakhs was collected in 1875-76 on account of arrears due from the year of famine.

Customs, Rs. 4,35,580.—Decrease under customs imports of 6 lakhs of rupees, not counterbalanced by a small increase under exports and miscellaneous; the latter arising from transfer of the balance of the Customs Confiscation Fund.

Pensions, Rs. 9,194.—Smaller contributions from officers lent to municipalities, native estates.

Statement showing the Imperial Expenditure in 1876-77 as compared with 1875-76.

HEADS OF EXPENDITURE.	Actuals, 1875-76.	Actuals, 1876-77.	1876-77.

N.B.—The differences between the actuals of 1875-76 as given last year and those now entered in this statement are due to adjustments made subsequent to the close of the accounts under the authority of the Comptroller-General.

The explanations of the items of increase and decrease in imperial expenditure in 1876-77, as compared with 1875-76, are as follow :—

INCREASE.

Forest, Rs. 72,603.—Larger payments under conservancy and works and establishments.

Excise on Spirits and Drugs, Rs. 3,558.—Increase chiefly on account of establishment.

Customs, Rs. 12,809.—Increase chiefly under salaries and appraising establishment and a new charge for rewards to informers consequent on the transfer of Customs Confiscation Fund to this head.

Salt, Rs. 61,558.—Under salt preventive establishment in Behar, owing to the charges of that department having been debited to famine for some time in 1875-76.

Opium, Rs. 62,37,850.—Larger payments to cultivators in both agencies owing to the outturn of 1875-76 having been much larger than was anticipated.

Administration, Rs. 78,580.—Increases under tour expenses, Civil Secretariat, Board of Revenue, Civil Offices of Account and Audit, Stationery Office, and stationery purchased in the country, not covered by decreases under staff and household of Governor-General, &c., Legislative Council, and Commissioners.

Law and Justice, Rs. 50,832.—Chiefly under law officers, owing to the pay of the Superintendent and Legal Remembrancer having been increased, as also owing to the increase in the establishment of the Superintendent and the employment in the interior of Government mooktears.

Medical, Rs. 8,451.—Payments last year were below the average.

Political Agencies, Rs. 50,849.—Due to the expenditure incurred on account of the ceremonies on the occasion of proclaiming the assumption by Her Majesty the Queen of the title of Empress of India on the 1st January 1877.

Allowances, &c., Rs. 9,058.—Rs. 9,000 were paid as compensation to Bhooteahs and Rs. 6,000 to zemindars for their relinquishment of collection of all cesses and tributes, &c., not covered by a decrease under territorial and political pensions and sayer compensation.

Civil, Furlough, &c., Rs. 5,602.—Furlough allowance of a District Superintendent of Police under the Punjab Government, as also subsidiary leave allowances of Colonel Burn, Manager, Durbhunga Raj, and Mr. J. Lambert, Deputy Commissioner of Police, Calcutta.

Allotments, Rs. 50,057.—Increased assignments in 1876-77, as under:—

<i>Add—</i>			Rs.
Snake Poison Commission	6,000
Charges for exhibitions and fairs	2,000
Assignment for the Ungool and Bankee estates	3,271
Special Census grant, being balance at credit	49,483
Total			60,754
<i>Deduct—</i>			Rs.
Form Store Department, transferred to Superintendent of Stationery	8,000
Cost of insanes transferred from Dacca to Tezpoore	2,700
			10,700
Total			50,054

DECREASE.

Interest on Service Funds, &c., Rs. 4,458.—Smaller payments under interest on Presidency Savings Bank deposits.

Refunds, Rs. 1,36,090.—Smaller refunds under land revenue, &c., salt unclaimed deposits, and miscellaneous, &c.

Land Revenue, Rs. 93,842.—A net decrease, there being smaller payments for salaries of Collectors and Deputy Commissioners, commission on revenue collections, and malikana, as also no adjustment for stores supplied, against an increase under office establishments, charges of Government estates, revenue surveys, and land settlements.

Stamps, Rs. 5,362.—Decrease chiefly under superintendence.

Minor Departments, Rs. 7,180.—Expenditure on account of the *Bengal Gazetteer* and statistical memoirs ceased, more than covering increases under emigration salaries and establishments and cinchona plantations.

Marine, Rs. 1,59,733.—Decreases under Master Attendant's and marine establishments and Dockyard building and repairs of ships, Rs. 20,000; under coals purchased in the country, &c., Rs. 75,000; under timber, stores, &c., purchased in the country, Rs. 97,000; and under miscellaneous of over a lakh of rupees, due to the transfer of charges on account of False Point Port to Port Fund, to a decrease under Calcutta port charges, and to the charge of Rs. 65,557 on account

of a deficit balance of Balasore Port Fund at the close of 1873-74 being taken in the accounts for 1875-76; also owing to decrease in pilotage, pilot establishments, &c., and marine pensions and gratuities.

Ecclesiastical, Rs. 11,041.—Smaller payment for salaries.

Superannuations, Rs. 74,577.—Chiefly owing to some portion of the expenditure for marine pensions and gratuities not having been transferred to that head in 1875-76.

Miscellaneous, Rs. 1,40,060.—The heavier charge in 1875-76 was owing to the visit of His Royal Highness the Prince of Wales to India.

Famine, Rs. 50,79,667.—No grants made on account of famine relief in 1876-77.

MONETARY ARRANGEMENTS.

During the year 1876-77 there has been no increase in the number of Banks opened, and the average balance at credit of each depositor has diminished owing to a strict application of the rule which limits the amount which each person can deposit annually to Rs. 500. In other respects the Banks show satisfactory progress, as indicated in the following tables:—

	1875-76.	1876-77.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Number of Banks	45	45
Number of depositors	3,861	4,513	652
Average number of depositors per Bank	85	100	15
Balance of deposits	8,63,198	9,69,948	1,16,750
Average balance in each Bank	18,959	21,554	2,595

Amount of interest allowed to European and Eurasian depositors,	4,037	5,696	1,659

Number of Accounts and Balance of Deposits at the end of each of the past seven years.

	No. of accounts.					Balance of deposits.
						Rs.
1870-71	542					67,310
1871-72	1,201					1,82,091
1872-73	1,815					3,26,736
1873-74	2,531					4,90,091
1874-75	3,176					6,66,994
1875-76	3,861					8,53,198
1876-77	4,513					9,69,948

Money orders. The total issues of money orders during the two years 1875-76 and 1876-77 were as follow :—

	Orders issued.					Value.
						Rs.
1875-76	28,737					14,03,151
1876-77	32,934					17,92,199

showing an increase of 4,197 orders, to the value of Rs. 3,89,048.

The main part of this increase occurred in Noakholly, Calcutta, Balasore, Burrisal, and Cuttack, viz.—

								Rs.
Noakholly	1,27,263
Calcutta	69,064
Balasore	61,675
Burrisal	47,662
Cuttack	30,645

In the case of Calcutta there was a great demand for money for the use of the rice trade, which had received an impetus on account of the scarcity in the Madras presidency, and merchants availed themselves largely of money orders until a limit was placed on their issue. The increase generally, however, is accounted for by the fact that circumstances did not admit of so free a supply of currency notes to the district treasuries as had been furnished in the previous year, and the public was obliged to have recourse to money orders for making remittances.

The average value of each money order, which was 48·4 in 1873-74, 54·9 in 1874-75, 48·8 in 1875-76, rose again in 1876-77 to 54·4—that is, nearly to the average as it stood in 1874-75. The years 1874-75 and 1876-77 may be considered abnormal, the exceptional circumstance which led to the greater use of money orders in those years being the same, namely the briskness of the rice trade in connection with the relief of famine. But the normal years also show an increase in the smaller remittances, for which the money order system is specially intended, and indicate that it is steadily gaining ground in the estimation of the public.

The payments were as follow :—

	Orders paid.					Value.
						Rs.
1875-76	48,701					21,74,492
1876-77	54,248					27,80,105

showing an increase of 5,547 orders, to the value of Rs. 5,05,613.

The total amount of commission realized was Rs. 19,714, against Rs. 15,718, showing an increase of Rs. 3,996.

The opening balance on 1st April 1876 at the mofussil treasuries amounted to Rs. 40,83,645. The value of notes received during the year 1876-77 was 272 lakhs, and that of notes issued during the same period was nearly 150 lakhs.

The transactions in notes at the mofussil treasuries during 1876-77 and two previous years were—

<i>Receipts.</i>			
	1874-75.	1875-76.	1876-77.
In payment of dues ...	1,70,93,540	1,59,56,310	1,69,27,390
„ exchange for silver ...	71,47,880	95,53,530	1,02,88,295
„ „ „ notes ...	5,94,840	4,23,940	3,05,300
Total ...	2,48,36,260	2,59,33,760	2,75,21,180

<i>Issues.</i>			
	1874-75.	1875-76.	1876-77.

„ exchange for silver ...	1,17,51,935	1,24,99,100	70,19,690
„ „ „ notes ...	5,94,840	4,23,920	3,05,300
Total ...	2,45,12,525	2,27,76,020	1,52,87,880

The receipts during the year under review exceed those of the two previous years, but there has been a considerable falling off in the issues. This decrease is due to the restricted supply of currency notes to mofussil treasuries in 1876-77. Under orders of the Government of India the treasury balances of Bengal had to be reduced and kept as low as possible, and note remittances from Calcutta, which meant an addition to the mofussil balances, were therefore seldom made, the supply of notes at mofussil treasuries being principally kept up by transferring to treasuries where there was a dearth of notes the surplus of those possessing large note balances.

	<i>Receipts.</i>	<i>Issues.</i>
	Per cent.	Per cent.
Beerbhoom ...	29	14

The note receipts were 18 per cent. of the total receipts of cash and notes, and the note payments were 9 per cent. of the total payments of cash and notes. The percentage of the note receipts and payments at some of the more important treasuries, as compared with their total receipts and payments, is given in the margin.

The total cash balance of the Bengal treasuries on 31st March 1877 was Rs. 2,21,66,611, and of this Rs. 41,86,155 were held in notes.

Provincial and Local Finance.

IN the corresponding chapter in the Administration Report of last year a sketch was given of the financial administration of the Government of Bengal from the time of the inauguration of the system of provincial finances up to the end of the year 1875-76. It was there shown that in accordance with the orders of the supreme Government the accounts of the year 1875-76 had been closed, and the accounts of 1876-77 were to open with a clear credit balance of Rs. 5,00,000 under the two heads "provincial services" and "provincial reserve." On this basis the budget estimates of the year 1876-77 were framed; and after allotting to the various departments and services the funds necessary to carry on their work during the year, it was estimated that there would remain a gross surplus of Rs. 6,00,000 : thus—

				Rs.
Under provincial services	3,72,945
Ditto reserve	2,27,055
				<hr style="width: 100px; margin-left: auto; margin-right: 0;"/> 6,00,000 <hr style="width: 100px; margin-left: auto; margin-right: 0;"/>

In other words, the year, which began with an opening balance of five lakhs, would, it was originally estimated, close with a credit balance of six lakhs, thus showing an improvement of one lakh in the course of the year.

In preparing the estimates of 1877-78, however, it was believed that the original estimate for 1876-77 had been too sanguine, and the closing balance for that year was set down at only Rs. 47,692 under provincial services and Rs. 1,03,027 under provincial reserve, or Rs. 1,50,719 altogether. It would seem now that there was no sufficient reason for reducing so materially the estimate of the closing balances. From the accounts of 1876-77, which have now been closed, it appears that the year, which opened with a credit balance of Rs. 5,00,000, closed with a balance of Rs. 8,49,395, thus showing an improvement of Rs. 2,49,395 during the year.

PROVINCIAL SERVICES.

The following statement shows the accounts of the year 1876-77 under provincial services as compared with the figures for the previous year and the original budget estimates of the year :—

RECEIPTS.	Estimates, 1876-77.	Actuals, 1876-77.	Actuals, 1875-76.	DISBURSEMENTS.	Estimates, 1876-77.	Actuals, 1876-77.	Actuals, 1875-76.

Opening balance	5,00,000	5,00,000	Closing balance	3,72,944	2,87,285
	1,45,32,900	1,44,07,009		1,45,32,900	1,44,07,009

The following explanations may be given of the principal differences between the figures of 1876-77 and those of 1875-76 :—

The increase is due to certain additional services transferred to the Imperial allotment. control of the local Government during the year.

The decrease which is apparent in the receipts of the year as compared with the receipts of 1875-76 is not a real decrease of income, but is due to the discontinuance of the practice of adjusting under this head the value of printing work executed at the Alipore Jail Press and the hire of convicts on irrigation works. There is really an increase of Rs. 50,000 under jail manufactures. The expenditure side also shows a decrease owing to the new mode of adjusting Alipore Jail Press charges under head of "printing" instead of under "jails," as heretofore.

The receipts under this head show an increase over last year's figures, which is chiefly due to the inclusion under this head of receipts from copying fees, which were formerly credited to a local fund called the "copying fee fund." The increase in expenditure is due to the debit under this head of the charges of the "copying fee fund," and also to the charges on account of revenue record-room arrangements being transferred to this head from head "miscellaneous."

This head shows an increase of revenue, which is due to larger receipts. The expenditure side shows a decrease, which is due to no payments having been made to the Calcutta Justices during the year on account of contribution for Calcutta police, the full amount of the contribution for 1876-77 having been drawn between January and March 1876, and therefore adjusted

in the accounts of 1875-76. There have also been savings under the subheads of "superintendence" and "district executive force." Against these reductions, however, there is an increase for special police and also a full payment of contribution to the Suburban Municipality, the charge in the previous year having been short owing to an overpayment in 1874.

There has been an actual decrease of income under several sub-heads which has not been counterbalanced by increases under other subheads, and therefore a small decrease is shown in the year's receipts as compared with 1875-76. The expenditure side shows a considerable decrease, which is due to savings under the subheads "direction," "colleges," "schools," "grants-in-aid," and "miscellaneous."

A slight improvement is apparent in the receipts of the year, but the expenditure side shows a considerable decrease, owing primarily to smaller expenditure for epidemic fever hospitals. There is also a reduction under medical colleges and schools, partly from smaller charges for medical stores and contingencies. There is, however, an increase under the sub-heads "vaccination," "lunatic asylums," and "grants for medical purposes."

The receipts will bear no comparison with the figures for 1875-76, as in that year the very large sum of Rs. 88,68,292 was credited under this head as grants received from the imperial Government on account of the famine expenses, and also a sum of Rs. 9,34,120 as an adjustment of famine accounts, and a grant of Rs. 2,00,000 from provincial reserve for the Zoological Gardens. The charges show a considerable decrease; but this is not attributable to any real decrease in the normal expenditure of the year, but to the fact that the expenditure on account of the visit of His Royal Highness the Prince of Wales was debited under this head in 1875-76.

The expenditure under this head in 1876-77 shows only some grants made to district road committees for works, whereas in 1875-76 the grants made on account of famine expenses were adjusted under this head.

The receipts are largely increased by the sale of a stock of tools and plants to the Madras and Bombay Governments for relief works in those provinces. The expenditure during 1875-76 included charges for the famine in Bengal, whereas no such charges appear in 1876-77. Hence the apparent decrease in the latter year.

The year opened with a balance of Rs. 5,00,000, as explained above, and closed with a balance of Rs. 2,87,265, thus showing a diminution of capital under "provincial services" of Rs. 2,12,735. This diminution has, however, been amply compensated by an improvement under "provincial reserve," as will be shown in the review of that section of provincial finance.

Under the orders of the Government of India in connection with the imperial budget for 1877-78, the system of provincial finance has received a further and very important development, arising out of the pressing necessity of

providing a permanent surplus of income over expenditure in order to meet famine charges and to enable the Government to defray expenditure on all unremunerative public works out of ordinary income, and not from borrowed capital.

The decentralization scheme of 1870-71 had resulted both in economy and improved administration. The growth of expenditure had certainly been checked, and in the few branches of *revenue* that had been transferred there had been a decided development of income. The Government of India therefore considered that the best way out of present financial difficulties lay in giving the local Governments a direct interest in the improvement of some of the more important heads of revenue, securing at the same time to the imperial Government a share in the results that might be expected to follow.

Accordingly the revenues of the following departments, hitherto under imperial control, were surrendered to the local Government on condition of the payment of a fixed annual contribution to the imperial treasury:—excise; stamps, with law and justice; and portions of the customs, salt, marine, and miscellaneous receipts. The contribution to be made in respect of excise was calculated so as to secure an annual increment under that head of one lakh of rupees for the imperial Government. Under stamps and law and justice 2½ lakhs per annum was similarly demanded as the normal growth of that head. The contributions under the remaining heads transferred were generally calculated on the basis of existing receipts.

The opportunity was taken to make over to the local Government with fixed grants various branches of expenditure hitherto reserved as imperial. In fact, the supreme Government has now under its direct control only those grants which for some special reason it is undesirable to make over to provincial control.

The revenues thus surrendered, and the grants as now settled for all the expenditure which is thus entrusted to provincial management and responsibility, are as follow:—

RECEIPTS SURRENDERED FOR ANNUAL FIXED CONTRIBUTION.						CHARGES TRANSFERRED WITH FIXED GRANTS.	
	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.		1877-78.
	Rs.	Rs.	Rs.	Rs.	Rs.		Rs.
Excise	64,00,000	65,00,000	66,00,000	67,00,000	68,00,000	Refunds	4,91,000
Customs	36,000	36,000	36,000	36,000	36,000	Land Revenue ...	22,62,000
Salt	2,20,000	2,20,000	2,20,000	2,20,000	2,20,000	Excise	2,92,000
Stamps, Law and Justice.	1,06,75,000	1,08,50,000	1,11,25,000	1,14,00,000	1,16,75,000	Customs	6,93,000
Marine	10,84,000	10,84,000	10,84,000	10,84,000	10,84,000	Salt	39,000
Miscellaneous ...	7,92,000	7,92,000	7,92,000	7,92,000	7,92,000	Stamps	2,39,000
						Administration ...	12,61,000
						Minor Departments.	1,68,000
						Law and Justice	63,97,000
						Marine	10,92,000
						Police	7,000
						Miscellaneous ...	25,000
						Stationery	4,95,000
						Petty construction.	7,000
Total	1,91,07,000	1,94,82,000	1,98,67,000	2,02,32,000	2,06,07,000	Total	1,34,70,000

From the above statement it will be seen that the various departmental receipts have been transferred to the Government of Bengal for a fixed contribution in 1877-78 of Rs. 1,91,07,000, and the charges have been transferred with a fixed total assignment of Rs. 1,34,70,000. Combining the previous imperial assignment with the present figures, the result may be summarized as follows :—

	Rs.
Amount of previous imperial assignment for 1877-78	1,10,59,000
Total amount of present grants transferred	1,34,70,000
	2,45,29,000
Amount at which the supreme Government takes the receipts of departments surrendered in 1877-78	1,91,07,000
Amount of imperial grant for 1877-78	54,22,000

Under this arrangement the imperial grant for 1877-78 necessary to balance accounts would strictly be Rs. 54,22,000; but the Government of India, in concluding these arrangements, has deducted Rs. 5,90,000 from the previous imperial grant of Rs. 1,10,59,000 as a lump retrenchment or contribution from provincial resources. It will be observed that the net grant for 1877-78 will therefore stand at Rs. 48,32,000.

It is in contemplation to add a further sum to the Bengal assignment on account of stores purchased in England as soon as the past expenditure for these items for Bengal is ascertained. The receipts and charges under the head of "land registration" have subsequently been transferred to "provincial control;" but as the service is a new one the figures are not yet known. Meanwhile the Government of Bengal will be entitled to appropriate to provincial uses any surplus, and will be bound to make good from provincial sources any deficit which may accrue upon all the revenues and services which will henceforth be under its direct management.

There is a further proposal under consideration for transferring from imperial to provincial management the receipts and charges recorded under head "*Government estates*" subordinate to land revenue, but no definite arrangements have yet been concluded.

It is incumbent upon the local Government, in managing its finances, never to exhaust the balance at its credit with the Government of India. The Government of India will not accept any estimates or allow any transactions which involve the expenditure of more money than is at credit of the local Government in the imperial treasury; and it will be the duty of the Accountant-General, on behalf of the Government of India, to take care that this condition is never infringed. To enable the Government of India to enforce this condition, the local Government, when submitting its yearly estimates, is required always to state its opening balance and the effect thereon of the estimates presented.

Subject to this condition, and to the other rules and restrictions which have been laid down, the local Government may spend at its own discretion the funds placed at its disposal. These rules and restrictions need not be described here in detail; but the most important of them provide that without the previous sanction of the Government of India no fresh taxation can be imposed, or any change made in any system of revenue management; no new general service can be undertaken; no appointment with pay exceeding Rs. 250 a month can be created, or reduced, or abolished; and no class or grade of officers can be created or abolished or its pay altered; that no standing order or rule of the supreme Government shall be changed, and that returns and accounts shall be submitted in the forms prescribed. Full power is reserved to the supreme Government to modify, add to, or repeal any of these restrictions and conditions. The liberty of action thus conceded will not affect the duty of the local Government to keep the Governor-General in Council in the several departments fully informed of its executive and financial proceedings. The Government of India will continue to exercise its general powers of supervision and control in all departments, but it will as far as possible avoid interference with the details of the local administration, and everything which might lead to embarrassment of the provincial finances.

From 1870-71 to 1876-77 the accounts of provincial services were recorded under separate heads, and it was thought inexpedient to retain in the imperial accounts and estimates the details of the revenue and expenditure transferred to the local Government; and the whole transactions regarding them were represented in the imperial account by a single entry under head of "*allotments for provincial services.*" The Government of India, however, saw reason to regret this arrangement, by which figures of importance were relegated to subordinate statements: the general accounts were incomplete, and the character of the transactions between the imperial and local Governments was not truly represented, nor their operation sufficiently illustrated. The Government of India has therefore determined to re-incorporate in the general estimates and accounts the transactions of the local Government heretofore recorded as provincial, and the account of 1877-78 will be shown under this new classification in next year's report.

With reference to the above arrangements, the Government of India called for a revised provincial budget estimate for 1877-78. No actual revision of the details of the budget provisions was required, as the departmental estimates, when framed, were well considered, and were not susceptible of reduction. But a revised general estimate was needed, so as to combine and show in one view the receipts and expenditure of the services now transferred with those transferred in 1870. This revised estimate is really an amalgamation or consolidation of the provincial estimate of 1877-78, as previously sanctioned, with the receipts and charges of the several budget heads now transferred to provincial control. The only material alteration it has been found necessary to make is under the head of "stamps." The Government of India has surrendered to the Bengal Government the revenues under

Amalgamation of imperial and provincial accounts.

Revision of the provincial estimates for 1877-78.

head of stamps for a contribution during 1877-78 of Rs. 98,50,000.* But from returns which have been collected from local officers it appears that it may reasonably be expected that a sum of Rs. 5,90,000 in excess of the contribution will be realized during 1877-78 on account of sale of stamps owing to the operations of the Land Registration Act, VII (B.C.) of 1876; and this anticipated income being added to the stamp revenue surrendered restores the equilibrium in the closing balance of 1877-78, which otherwise would have been disturbed by the retrenchment of Rs. 5,90,000 ordered by the supreme Government from the former imperial assignment. The following statement shows the revised estimates of receipts and charges for provincial services for 1877-78 :—

Revised Estimate.

		51,32,000			
		70,000			
Contribution from provin- cial reserve fund.			Debt heads		
Total		2,74,65,166	Total		2,74,53,967
			Closing balance		11,199
					2,74,65,166

NOTE.—The figure shown as the opening balance of 1877-78 represents the opening balance as shown in the budget estimates; but the actual opening balance having since proved to be Rs. 2,87,265, it should be noted that the contribution of Rs. 70,000 from the provincial reserve fund, which was entered as a credit to balance the accounts, will not now be required.

The arrangements described above refer only to the ordinary finance of the Civil Department, and do not affect extraordinary public works receipts and charges. The Government of India has resolved further to enforce provincial responsibility for the financial results of works constructed at the public expense for local and

	Rs.
* Stamps	98,50,000
Law and justice	7,25,000
Total	1,05,75,000, as shown above.

imperial purposes. It has been decided to make each local Government responsible not only for the management of any great public works which are being carried on, but for meeting the charges which these works entail. The following works have accordingly been transferred to provincial control :—

Irrigation Works.

Orissa canals.	Damoodah canals.
Midnapore canals, including	Tirhoot canals.
tidal canals.	Hooghly canals.
Sone canals.	

Railways.

Calcutta and South-Eastern	Tirhoot Railway.
State Railway.	Tirhoot Railway, Kosi Extension
Northern Bengal State	Survey.
Railway.	Northern Bengal Railway
Nullattee and Azimgunge	Survey.
State Railway.	

It has been estimated that to defray the working expenses of the canals in Bengal in 1877-78, and to make good the interest on their capital cost, a sum of Rs. 22,19,000 must be provided from provincial resources; while the interest due upon the capital expended upon State railways in Bengal is estimated at Rs. 8,21,000, of which the net traffic earnings will supply Rs. 2,36,000, leaving a sum of Rs. 5,28,000 to be made good from provincial funds. Thus the sum to be paid to the imperial Government during 1877-78 from provincial resources on account of interest on the capital cost of canals and railways is—

				Rs.
For canals	22,19,000
„ railways	5,28,000
			Total	27,47,000

The calculations from which these results are deduced do not include the capital expended on the Calcutta and South-Eastern Railway, and the annual charges for interest are calculated on the principle of charging to the works half a year's interest on the capital expended during the year *plus* a year's interest on the capital expended up to the beginning of the year. The Government of India, in transferring these works to the local Government, said that if the canals and railways together yield less than the sum to be paid to the imperial Government, the deficiency must be supplied from separate provincial resources: if they should yield more, the surplus would be added to provincial balances. Now it was evident from past experience that these works could not, however economically or strictly managed, pay their own expenses, much less yield a surplus, and also that existing provincial resources could not bear the burden of the extra contribution of Rs. 27,47,000. It therefore became necessary to devise some measures for increasing provincial income, and a law was passed, on the model of the Road Cess Act, called

the Provincial Public Works Cess Act, under which it is expected to raise a revenue of about Rs. 30,00,000, which will enable the local Government to pay the extra contribution and meet any deficit under the head of provincial services. This law came into force on the 13th June 1877. As nearly a quarter of the financial year had then elapsed, it was apprehended that for 1877-78 Government could not hope to realize more than three-fourths the year's cess—about Rs. 24,00,000, and that, allowing for charges for collection and uncollected arrears, the actual net receipts from the cess would not probably exceed 20 lakhs during 1877-78. A representation to this effect was made to the supreme Government, and that Government has consented to reduce the contribution for 1877-78 from Rs. 27,47,000 to Rs. 20,00,000. Other measures are under the Lieutenant-Governor's consideration for increasing the revenues of the province by passing laws for the levy of a cess upon irrigated lands, and for the payment of a tax on trades and dealings. It has been decided to credit the receipts of the provincial public works cess under the head of Provincial Public Works Cess Fund in the provincial reserve fund budgets and accounts.

PROVINCIAL RESERVE FUND.

In last year's report the accounts of the Provincial Reserve Fund were reviewed from the commencement of the provincial system of finance to the end of 1875-76, and the precise constitution of this head of provincial finance was explained. It was shown that the provincial reserve fund accounts closed at the end of 1875-76 with a credit balance of Rs. 9,34,120, the whole of which was surrendered to the Government of India in final adjustment of famine accounts. The year 1876-77 therefore opened without any credit balance; but after allotting to the separate subheads the amounts required to carry on the necessary work, it was originally estimated that this head of provincial finance for 1876-77 would close with a credit balance of Rs. 2,27,055. But these estimates have been exceeded, and the final accounts submitted by the Accountant-General show that the year actually closed with a credit balance of Rs. 5,62,130. This variation of actuals from estimates is explained below.

The following statement shows the actuals for 1876-77 compared with the estimates of that year and accounts for 1875-76, as well as the budget estimates for 1877-78.

the opening balance as shown in the budget estimates, but annual opening balance proved to be the Rs. 70,000 shown under head "contributions" to the provincial services budget.

There is a large apparent increase under *Ferry Tolls* in the estimates of 1876-77 compared with the actuals for 1875-76 and 1876-77. In 1875-76 the practice was for district officers to collect all ferry tolls, and after paying the cost of collecting establishments, &c., to make over to district road committees the net receipts of certain ferries assigned to them by Government, and to show only the balance as receipts under local public works. But the Government of India ruled that the gross collections from ferries should be shown as receipts, and the amount made over to district committees should also be shown as a separate item of expenditure. Under this arrangement the receipts appear larger in the estimates, but are not really a larger revenue to Government. It should, however, be remarked that by recent orders the Government of Bengal has suspended its previous orders by which surplus receipts of ferries on district roads were made over to road committees; and as a rule no further assignment from these receipts will be made to road committees from and after the 1st October 1877.

Under the head of *Strand Bank Fund*, although the local estimates of expenditure for 1877-78 have been reduced by Rs. 65,000, yet it is still in excess of receipts by Rs. 12,244. Some deficit appears inevitable each year, as the fund receipts are insufficient to meet the expenditure necessarily chargeable to the fund, viz. the maintenance of the Eden Gardens and the repairs of roads on the Maidan and on the river-bank from Hastings Bridge to Chandpal Ghât.

Under the head of *Staging-bungalow Fund* it will be seen that the expenditure is in excess of receipts, and this has been the case for a number of years past. With the progress of railways and facilities for travelling the staging-bungalows on the main lines of roads have been deserted, and have ceased to be self-supporting, and it is to be apprehended that they may be a source of loss to Government in future. Unsatisfactory as the accounts under this head now appear, they will probably become worse when the Northern Bengal Railway is opened and the staging-bungalows on the Ganges and Darjeeling road remain unused. The attention of the Public Works Department has been called to the subject, with a view to some arrangements being made to improve the financial results under this head.

LOCAL FINANCE.

The finances of local funds do not call for any special remark. During the year 1876-77 they have remained in their normal condition. In former reports trust funds were treated under the headings local funds, municipal funds, and trust funds.

The system hitherto in force of recording the accounts of municipalities in Government books was found in practice to give rise to difficulties in reconciling the complete municipal accounts with the transactions of Government treasuries. It has therefore been decided, with the sanction of the supreme Government, to exclude details of municipal accounts from the Government books commencing from 1875-76, a separate debt head being opened in the imperial accounts for municipalities, and all record of details in the provincial and local accounts will cease.

LOCAL FUNDS.

The following statement shows the actual receipts and charges on account of local funds for the year 1876-77 as compared with the figures for 1875-76 and the estimate of 1877-78.

RECEIPTS.	Actuals, 1875-76.	Actuals, 1876-77.	Estimates, 1877-78.	CHARGES.	Actuals, 1875-76.	Actuals, 1876-77.	Estimates, 1877-78.
District Road Fund	75,40,723	31,44,511	31,78,000	District Road Fund	57,22,933	26,62,284	31,97,683
District Road Account	2,49,469	1,46,490	1,83,000	District Road Account	85,844	99,842	1,84,144

Total	85,27,124	40,12,559	40,70,311	Total	64,86,147	34,81,104	40,12,070
Opening balance	2,71,447	17,70,530	23,02,085	Closing balance	17,70,530	23,02,085	23,02,326
GRAND TOTAL	82,55,677	57,83,189	63,72,396	GRAND TOTAL	82,55,677	57,83,189	63,72,396

In the above statement it will be seen that certain funds which appear in the accounts of 1875-76 do not re-appear in the accounts of 1876-77, and that some funds which do not appear in the former year are shown in the latter year. The following explanation will throw light on the subject.

This fund has been amalgamated with the fund called "*Assignments for the Improvement of Government Estates*," and all transactions are now recorded under the latter head only.

These funds have been closed, and their receipts and charges have been transferred to local municipalities and district road committees. The old surplus balances of these funds have been credited to Government in the provincial reserve accounts.

This fund has been removed from the accounts of local funds, and its receipts and charges were transferred to the major head "customs" in the imperial accounts.

This fund has been closed, and its receipts and charges have been transferred to provincial services under head "registration," to which they more properly belong.

Both these are new funds, and had no existence in the year 1875-76.

The item of expenditure under this fund represents some old balances which have been written off and credited to Government under head "provincial reserve."

TRUST FUNDS.

There are at-present 45 small funds under this head, for which separate accounts are kept in the books of the Accountant-General. It is not necessary here to review each fund separately. Taken in the gross, the figures of receipts and charges stand as follow:—

				Actuals.		Estimates.
				1875-76.	1876-77.	1877-78.
				Rs.	Rs.	Rs.
Receipts	2,00,602	1,56,857	1,17,249
Opening balance	51,098	53,253	61,630
Total				2,51,700	2,10,110	1,78,879
Charges	1,98,447	1,48,481	1,06,082
Closing balance				55,253	61,630	72,797

Of the 45 funds under this head, 25 are educational trust funds, that is to say, funds placed in the hands of Government the interest of which is devoted to the advancement of education in Bengal. It is, however, understood that there are other small trust funds in charge of the departmental authorities not brought on the Government books. The question of dealing with these various funds in a more regular manner is under the consideration of Government.

ROAD CESS.

The District Road Cess Act X (B.C.) of 1871 has been extended to forty out of the forty-three districts under the Government of Bengal. In the remaining three (the Chittagong Hill Tracts, the Sonthal Pergunnahs, and Singbhoom), there are special local reasons which render the introduction of the measure undesirable. In twenty-two districts

1. Chumparan.
2. Julpigoree.
3. Dinagapore.
4. Patna.
5. Gya.
6. Durbhunga.

7. Mozufferpore.
8. Pubna.
9. Bogra.
10. Sarun.
11. Rungpore.
12. Shahabad.

the valuations were completed on the 30th September 1875, the last day of the road-cess year 1874-75.

In the twelve districts enumerated in the margin the operations were brought to a conclusion during 1875-76. In Backergunge, Lohardugga, Noakholly, and Midnapore, they have since been completed, and in Chittagong they are now drawing to a close. In Darjeeling, to which the Act was extended in September 1876, the valuations are still in progress, but the cess will be levied from the 1st of October 1877.

The result of the valuations of land in the first ten districts mentioned in the margin of the above paragraph was given in table 1 at page 362 of the Report for 1875-76. The figures for Shahabad, Backergunge, and Lohardugga are entered in the following table. No figures are available for the remaining districts, the completion reports and returns not having yet been received.

I.—Statement of Valuation of Land [Part II of the District Road Cess Act X (B.C.) of 1871].

DISTRICTS.	Number of estates valued.		Number of tenures.		Total.		Valuations made.		Revenue of district.	Number of times by which the valuation of estates exceeds the revenue.
	Over Rs. 100 revenue.	Rs. 100 and less revenue.	Over Rs. 100 rent.	Rs. 100 and less rent.	Estates.	Tenures.	Value of estates.	Value of tenures.		
							Rs.	Rs.	Rs.	
Shahabad ...	2,841	3,299	4,242	9,483	6,140	13,723	56,52,208	21,22,599	17,43,202	3.2
Backergunge ...	933	2,615	11,034	2,55,010	3,548	2,66,044	69,59,267	66,65,768	13,10,505	5.3
Lohardugga ...	138	692	954	33,953	830	34,907	15,12,227	14,87,254	1,02,559	14.7
Total ...	3,912	6,606	16,230	2,98,446	10,518	3,14,679	1,41,23,702	1,02,75,621	31,61,266	4.4

It will be seen that in the above three districts 10,518 estates, containing 314,679¹/₂ tenures, have been valued. The number of tenures, as compared with the number of estates, varies largely in the different districts. Thus while 6,140 estates in Shahabad contain only 13,728 tenures, 3,548 estates in Backergunge contain 266,044 tenures, and 830 estates in Lohardugga contain 34,907 tenures. Subinfeudation has been carried on to a very great extent in Backergunge, reaching the seventh or eighth degree. The valuation of these three districts is on the average 4·46 times the Government demand on account of revenue. The rate varies much, being highest in Lohardugga, where the valuations are 14·7 times the revenue, and lowest in Shahabad, where the valuations are 3·2 times the revenue.

Under part III of the Act operations were confined to assessing 74 mines—73 in Shahabad, valued at Rs. 13,690, and one in Lohardugga, valued at Rs. 404.

Mines, &c.

House assessment.

The following table shows the result of the house assessment :—

II.—*Statement showing the Result of House Assessment [Part IV of the District Road Cess Act X (B.C.) of 1871].*

DISTRICTS.	Number of assessors' circles or punchayets.	Estimated number of villages liable to assessment.	Number of villages assessed.	Amount of assessment calculated at the rate fixed by schedule E of the District Road Cess Act.
				Rs.
Shahabad	4	217	217	5,914
Midnapore*	5	924	692	16,495
Lohardugga	3	83	75	2,174
Total ...	12	1,224	984	24,583

* The assessment of houses in Backergunge was suspended up to October 1877 owing to the distress caused by the storm-wave of October 1876.

Out of 1,224 villages estimated as liable to assessment in Shahabad, Midnapore, and Lohardugga, 984 have been assessed at Rs. 24,583. The rest of the villages have been exempted from assessment, principally on account of their being purely agricultural.

The following table exhibits the demands, collections, and arrears of road-cess on lands and mines for the cess year 1875-76:—

III.—Statement of Demands, Collections, and Arrears of Road-cess on Lands and Mines for the cess year 1875-76.

* Only the demands for April 1876 have been shown here.

N.B.—The difference between the figures in column 2 of this statement and those in column 10 of the statement for 1874-75 is due to corrections.

In addition to the 18 districts in which cess was levied in 1874-75 collections commenced in six more districts, viz. Mymensing, Dinagopore, Bogra, Maldah, Julpigoree, and Chumparun. In two districts, Burdwan and Hooghly, collections which were suspended in 1874-75 were resumed in 1875-76. Thus there were 26 districts in which the cess was levied in 1875-76.

The total demand, after excluding all sums not fairly demandable within the year, was Rs. 17,21,994, of which Rs. 92,980 represent the arrear demand for previous years and Rs. 16,29,014 the demand for the year 1875-76. Of the arrear demand Rs. 81,155, or 87.28 per cent., and of the current demand Rs. 14,92,618, or 91.62 per cent., were realized during the year. The current and arrear collections taken together amounted to Rs. 15,73,773, or 91.39 per cent. on the aggregate current and arrear demand, against 90.81 per cent. in 1874-75. The remissions during the year amounted to Rs. 916,

leaving a total outstanding balance of Rs. 1,47,305, against Rs. 92,507 outstanding balance of the previous year.

Excluding from comparison the three Orissa districts, in which the dates fixed for the payment of the cess differ from those of other districts, and affect the returns in such a way that the collections actually made within the year cannot be fully shown in the returns of that year, the most unfavourable results are those in Bogra, where only 80·52 per cent. was collected, and in Beerbhoom, which realized 81·08. The most favourable results are shown in Tipperah (98·3 per cent.), Purneah (97·54), Hazareebagh (96·3), Nuddea (96·1), and Burdwan and Chumparun (95·5). The outstanding balance at the close of the year was smallest in Hazareebagh (Rs. 928), and heaviest in Hooghly (Rs. 13,598).

The short collections and enhanced balances are due to the last day of payment having fallen within the Doorga Poojah holidays, and to the delay in the payment of cess by non-resident zemindars, lakhiraj-dars, and holders of joint estates. The first of the above causes was special to 1875-76, the second is of annual occurrence, and will be dealt with in connection with the question of the amendment of the Road Cess Act, which is under consideration. On the whole, however, the results of the working of the Act as regards the cess on lands are not unfavourable.

The following table exhibits the demands, collections, and balances of road-cess on houses for the cess year 1875-76:—

Total ...	105	20,045	15,885	4,160	1,25,147	97,216	27,931	32,091	4,963	27,128	13	77.68

N.B.—The difference between the figures in column 3 of this statement and those in column 11 of the statement for 1874-75 is due to corrections.

The arrears of 1874-75 were Rs. 20,045, and the demand of the year 1875-76 was Rs. 1,25,147, making a total demand of Rs. 1,45,192. The collections up to 30th September 1876, the close of the cess year, amount to Rs. 1,13,101, of which Rs. 15,885 represent arrear and Rs. 97,216 current collections. The total balance outstanding at the close of the year was Rs. 27,128, after excluding remissions amounting to Rs. 4,963, or 18.68 per cent. of the demand. The percentage of collections has, however, risen from 69.3 in the previous year to 77.68 in 1875-76.

The collections of house-cess up to the end of September exceeded 95 per cent. of the demand in nine* only of the 26 districts included in the return. The largest demand (Rs. 17,552) is leviable in Hooghly, and the amount actually collected in this district was Rs. 12,507, which is the largest sum realized in any district. The uncollected balance (Rs. 5,045) outstanding in this district is also the largest. The demand of the 24-Pergunnahs (Rs. 10,128) contrasts unfavourably with that of Hooghly, considering the relative importance of the two districts, and that full rates of cess have been fixed in both. The smallest demand and collections (Rs. 33 and 31 respectively) are shown in the return of Pooree.

As regards the percentage of collections on demand, the most unsatisfactory returns are from Dinagepore, where the collections up to September amounted to only 23.63 of the demand, Bogra 35.78, Rajshahye 45.53, and Beerbhoom 56.88. The difficulties experienced in the realization of the house-cess are owing to the remissness of village punchayets in assessing the houses and collecting the cess in villages under their control, and to the absence of any provision in the law imposing penalties on them for neglect to perform their duties. The losses arising from the death and poverty of the house-holders, and the abandonment of houses within the five years fixed under section 91 of the Act as the period during which the valuations of the house-cess hold good, also tend to reduce the realizations.

District officers have been requested to endeavour to exercise directly, and through their sub-divisional and subordinate executive

* Bankoorn, Nuddea, Jessore, Tipperah, Bhagulpore, Muldah, Pooree, Balasore, Hazareebagh.

establishments, a more close and thorough supervision over the administration of the house-cess. Left to the working of punchayets and underlings it may be a great oppression to the people, while the present results are anything but satisfactory.

With a view to bring the figures for the financial year 1876-77 up to date as much as possible, the following statements have been prepared from such returns as were available without waiting for complete results for the year.

Besides the 26 districts in which cess was levied in the cess year 1875-76, collections commenced from 1st October 1876 in 11 more districts, viz. Midnapore, Backergunge, Pubna, Rungpore, Gya, Sarun, Shahabad, Mozufferpore, Durbhunga, Patna, and Noakholly, thus making a total of 37 districts. The figures, however, for six districts, namely, Rajshahye, Dinagepore, Bogra, Sarun, Shahabad, and Mozufferpore, have not been obtained. The following statement therefore contains the figures for the remaining 31 districts:—

N.B.—The difference between the figures in column 3 and those in column 11 of the previous year's statement is due to corrections.

The statement below shows the demands, collections, and arrears of cess on houses for the first half-year ending 30th April 1877. The districts of Rungpore, Sarun, Shahabad, Patna, and Noakholly are not included in the statement, because no returns have yet been received from those districts. In Backergunge the levy of the cess has been postponed until the 1st October 1877 on account of the devastations caused by the cyclone of October 1876. The collections in Pubna, Purneah, Manbhoom, Dinagepore, and Rajshahye were very small. Measures are, however, being taken for the speedy realization of the arrears.

* The difference between these figures and those shown in column 11 of the statement for 1875-76 is due to corrections.

Land Revenue.

THE results of the working of the Land Revenue Department of the administration were in general satisfactory. The prosperity of the year was marred by one great calamity—the cyclone which ravaged the south-eastern districts of Bengal on the 31st October 1876. This necessitated suspensions of land revenue to a considerable amount, and also put a stop for the time to settlement operations in the localities affected. In other respects the year was marked by no very striking incidents. An important measure for the registration of the names and interests of landed proprietors became law during the year, but the results of it were hardly felt within the period embraced by the present report. Except in the districts devastated by the storm-wave a good harvest was realized, and the cultivators reaped a large profit from the high price of cereals which prevailed during the latter months of the year.

The total number of estates on the revenue roll during 1876-77, as compared with the preceding year, is shown in the following table:—

Class of estates.		1875-76.	1876-77.
I.—	Permanently-settled estates ...	140,704	132,570
II.—	Temporarily ditto ...	8,286	7,500
III.—	Government estates ...	2,514	2,432
IV.—	Ryotwaree tracts ...	44	27
Total ...		151,552	142,529

The large decrease under class I arose from the transfer of about 10,000 holdings in Calcutta, which had previously been shown as separate estates under permanent settlement, to class III, as a single Government estate. The decrease under class II was in the Rajshahye Division, and was due to the revised classification of a number of holdings in Darjeeling, which are now treated as subordinate tenures instead of distinct estates. The decrease in class IV was the result of the transfer of 21 estates in Noakholly, held for the most part under farming settlements, to class III of the table.

The current land revenue demand for the year, including malikana, revenue of police lands, and quit rents of tributary mehals, amounted to Rs. 3,67,27,341, against a demand of Rs. 3,45,55,929 in 1875-76. This increase, however, was almost entirely nominal, being due to the inclusion in the demand of 1876-77 of sums excluded last year on account of their not being realizable by law within the year. Irrespective of this

nominal increase, the actual increase amounted to Rs. 1,15,070, arising from re-settlements, escheats, and resumptions. The arrear demand was Rs. 17,87,823, or considerably less than half of that of last year, which was Rs. 40,52,840. The total demand of the year thus amounted to Rs. 3,85,15,164.

The collections of the current demand were Rs. 3,51,21,042, or 95·35 per cent., and the arrear collections amounted to Rs. 13,98,711, or 78·23 per cent. of the demand. Taking current and arrear collections together, they amounted to Rs. 3,65,19,753, or 94·81 per cent. of the total demand. The current collections were thus larger than those of the preceding year; but owing to the larger demand the percentage shows a decrease. In the arrear collections there was a falling off both in the amount realized and in the percentage. In 1875-76 the total collections were 95·58 of the demand, and in 1874-75 they were 92·36 per cent.

The remissions granted during the year amounted to Rs. 76,117, four-fifths of the whole sum being remissions of revenue in estates belonging to Government. The classification of these remissions gives the following results:—

				Rs.
Nominal remissions	48,818
Remissions of right	18,236
„ of grace	9,063

Remissions of the first two classes were allowed on account of diluvion of lands and re-settlements at reduced rates. Remissions of grace were largest in the district of Pooree, where they were granted on account of the loss of crops by inundation.

The unrealized balances of the year amounted to Rs. 19,19,294, being 4·98 per cent. of the total demand, and exceeding the balances of the preceding year by Rs. 3,54,049. A considerable portion of this balance was subsequently realized, and only about Rs. 80,000 are likely to prove eventually

Class I	...	2·80
„ II	...	9·73
„ III	...	28·71
„ IV	...	17·12

irrecoverable. The percentage of balances on demand under each class of estates is shown in the margin. Briefly it may be said that almost all the balances under class I were either on estates under the charge of the Court of Wards or on estates which have been advertised for sale for arrears; while most of the arrears under class II either accrued from suspensions granted on account of the cyclone, or were due from estates of which the settlements are not yet finally completed. The estates shown in classes III and IV are the property of Government, and their management is noticed in a separate section of the present report.

There were no sales of waste lands during the year, but there was an increased demand in the Dooars for leases both of tea lands and of lands intended to be brought under ordinary cultivation. A grant of 800 acres of land for tea cultivation was also made in the province of Chota Nagpore.

Waste lands.

Sources of Imperial Revenue other than Land.

CUSTOMS.

INCLUDING the revenue on imported salt, the administration of which has been separately dealt with, the following statement furnishes a general view of the gross and net revenue derived from customs duties in the whole of Bengal during the past five years:—

Bengal.

		1872-73.	1873-74.	1874-75.	1875-76.	1876-77.

Refunds and draw-backs.	Imports ...	5,27,899	2,74,978	3,10,901	3,06,028	2,90,965
	Exports ...	41,738	69,475	57,351	31,619	39,517
Total ...		5,69,637	3,44,453	3,68,252	3,37,647	3,30,482
Total net duty ...		3,53,64,888	3,41,84,223	3,50,89,725	3,48,29,370	3,46,67,644

Notwithstanding a considerable increase in the gross duty on imports of salt, the total net amount of duty collected in Bengal fell during the year 1876-77. from Rs. 3,48,29,370 to Rs. 3,46,67,644, being a decrease of Rs. 1,61,726. Excluding salt, the revenue from which is

based on a constant demand and is comparatively independent of trade fluctuations, the customs duties on imports are mainly derived from cotton goods, liquors, and metals. Under the single head of cotton goods the duty declined to the extent of Rs. 5,06,295, due for the most part to the prevalence of unfavourable rates of exchange, which discouraged importation. Liquors show an increase of Rs. 1,09,188 on account of spirits, and a decline of Rs. 53,279 under wines and liqueurs. The duty on metals rose by Rs. 53,459 during the year. Apparel, drugs and medicines, silk goods and woollen manufactures, also show a slight decrease. Among exports the duty on rice rose from Rs. 10,04,158 to Rs. 14,47,695, and that on lac from Rs. 2,29,573 to Rs. 3,39,109. This latter increase was probably due for the most part not to enhanced exports, but to the raising of the tariff valuations of lac in August 1875. The revenue derived from indigo fell from Rs. 3,46,721 to Rs. 2,84,881. Looking to the results of the entire year, it will be observed that although the net revenue fell by more than eleven lakhs in 1875-76 the further decrease of net revenue in 1876-77 amounted to Rs. 1,61,726, and that the expectations entertained at the time of the revision of the tariff, that the customs revenue would speedily recover itself by the natural growth of the import trade, have not yet been fully realized.

Details of the trade of Bengal, both foreign and interportal, will be found in another section of the present report.

OPIUM.

The report for 1876-77 not being due till the 1st of February 1878, the following paragraphs relate principally to the season 1875-76, regarding which detailed information has been received by Government since the publication of the last year's report.

The total number of beeghas under poppy cultivation in the Behar and Benares Agencies during the year 1875-76 was 8,49,168, which yielded an outturn of 1,28,818 maunds of opium. This is the largest outturn on record. An opium beegha contains 3,015 square yards, or about five-eighths of an acre. The extent of land devoted to opium cultivation, its outturn, and the average produce per beegha in each of the opium divisions of the two Agencies during the year 1875-76, as compared with 1874-75, are exhibited below.

DIVISIONS.	Total quantity of beeghas under cultivation after deducting failure.		Outturn of each division.		Average produce per beegha.

1874-75	359,353	39,201	4	5 $\frac{1}{10}$
1875-76	378,242	60,113	6	4

The season in both Agencies was a very favourable one, as is shown by the high rate of the average produce. The outturn was worst in the unirrigated lands to the north of the Ganges, and best in the Behar lands south of the Ganges, where the whole of the cultivation is irrigated. In the Shahabad district the general average produce was as high as 8 seers 10 chittacks per beegha.

Advances for the construction of wells for irrigation purposes were made liberally, and with good results. Manuring experiments were not very successful. The experimental cultivation during the season under review was again confined in both Agencies to seed selected by Mr. Scott, but it was found that the average produce per beegha obtained from the selected seed was rarely, if ever, greater than that obtained from the ordinary seed. The experiments, therefore, must be said to be very discouraging, and they have been renewed during the present season in a few of the Sub-Agencies only.

The policy of continuing rewards in the form of presents of shawls, &c., to deserving cultivators has been under consideration during the year, and it was found that the officers who were best qualified to give an opinion were in favour of the system. The distribution of these rewards is in accordance with old custom, and it seems to be appreciated by the people, and to stimulate them to the production of better opium. The extension of the challan system of weighing opium has also been under discussion, and there is much difference of opinion as to its advantages over the system of home weighments, which still prevails over part of the Benares Agency. The principal argument in favour of the challan system is that it is calculated to relieve the officers at head-quarters, especially the Principal Assistant, of some mechanical work, and to enable them to devote more time and attention to their proper duty of analysis. On the other hand, home

weighments are said to be more popular with the cultivators; and this is a point of special importance, as the price to be paid by Government to the cultivators for the crop of 1877-78 has been reduced from Rs. 5 to Rs. 4-8 a seer of the present consistence, 70°.

The Chota Nagpore Sub-Agency and the Rohinee factory in the Monghyr district, the outturn of which has for years been unsatisfactory, have been ordered to be closed.

Measures have been taken to provide the additional accommodation of two godowns in the Goolzarbagh opium factory for the storage of puttee or trash, and they are expected to be available for use in January 1878.

The following statements, compiled from data furnished by the Accountant-General of Bengal, show the receipts, charges, and net revenue of the Opium Department during the official year 1876-77, as compared with the results of the official years 1860-61, 1861-62, 1870-71, 1874-75, and 1875-76. Some of the figures for 1875-76 will be found to differ from those given in last year's statement, owing to the accounts for that year not having been finally closed when the Accountant-General submitted his statement from which the figures were taken. For the same reason the figures for 1876-77 are open to correction. It will be seen that the number of chests of provision opium of both Agencies sold during the year under review amounted to 47,240, being 1,730 chests in excess of the number sold during the preceding twelve months. The total receipts amounted to Rs. 6,17,35,725, and the charges to Rs. 2,83,30,164, leaving a net revenue of Rs. 3,34,05,561, being Rs. 36,51,782 less than that of the preceding year and Rs. 7,60,252 more than that of 1874-75. The average price realized per chest amounted to Rs. 1,270-1-10 $\frac{3}{4}$, against Rs. 1,259-2-11 $\frac{1}{2}$ in 1875-76, showing a difference in the price per chest of Rs. 10-14-11 as compared with the previous year. This result is attributable to the prices for opium which prevailed in the China market during the year under report.

1874-75 ...	26,115	18,885	45,000	3,21,26,795	2,21,89,250	17,12,310	5,60,28,255	2,33,82,046	3,26,46,309
1875-76 ...	26,055	19,455	45,510	3,34,48,150	2,38,62,425	19,12,207	5,92,17,782	2,21,60,439	3,70,57,343
1876-77 ...	26,350	20,890	47,240	3,43,24,900	2,56,75,500	17,35,325	6,17,35,725	2,83,30,164	3,34,05,561

The statement given in the margin shows the quantity of land engaged for cultivation during the past two years. It will be seen that in the year under report there was a decrease in both Agencies, as compared with the area engaged in the previous year, amounting in the aggregate to 12,614 beeghas.

The outturn of provision opium in the Behar Agency available for sale in 1878 is reported to be 32,166 chests, against 34,957 chests manufactured in 1875-76, being 2,791 chests less in the year under review as compared with the produce of the preceding year. The outturn in the Benares Agency is reported to be 35,001 chests, against 33,094 chests manufactured in 1875-76, or 1,907 chests in excess in the year under review. It will thus be seen that the total quantity of opium manufactured during season 1876-77 is 67,167 chests. A total of 54,000 chests will be brought forward for sale in 1878, which will include the reserve (35,315 chests) of the manufacture of season 1875-76.

Statement showing the Receipts, Charges, and Net Revenue of the Opium Department for the following years.

1876-77	11,76,537	6,025	11,69,512

EXCISE.

The Excise Report of last year showed the recovery of the excise revenue from the effects of the scarcity, which had so seriously diminished the receipts of 1874-75.

Financial results.
In 1873-74 the revenue had exceeded 58 lakhs of rupees; in the following year it decreased to about 56½ lakhs. But as soon as the pressure of scarcity was removed the revenue recovered itself and the collections of 1875-76 amounted to Rs. 60,86,919—an increase of about 4½ lakhs compared with 1874-75, and a revenue largely exceeding the receipts of any former year. The revenue, however, had by no means reached its limit, for in 1876-77 the gross receipts amounted to Rs. 62,47,059, showing an increase of Rs. 1,60,140 over the returns of the preceding year. The improvement extended to all exciseable articles except rum and chandu, and was attributable partly to the general prosperity of the country and partly to better management and more careful supervision. The proceeds of the excise revenue were transferred by the Government of India to the local Government with effect from the 1st April 1877, the conditions of the transfer assuming that the gross receipts will amount in 1877-78 to 64 lakhs of rupees, and that the net revenue will thereafter show an annual increase of one lakh. Any further increase than this which may be obtained will be available in relief of general provincial finances, while any amount by which the increase may fall short of this sum will have to be made good by the local Government.

The principal changes introduced during the year under review were the following:—The outstill system was extended to the districts of Burdwan and Shahabad. The duty on country rum was raised from Rs. 3 to Rs. 4 per gallon London-proof. The duty on country spirit was increased in several districts of Bengal. The opium shops in Calcutta and the suburbs, including part of the 24-Pergunnahs situated within a radius of four miles of the town, were settled by auction. The system of levying fees for opium licenses was extended to Darjeeling, Monghyr, and the Patna and Chota Nagpore Divisions, and the fees for these licenses in some districts were increased. The selling price of opium was increased in Midnapore, Cuttack, and Pooree.

A measure for consolidating the existing excise laws in Bengal was passed during the year by the local Legislature, but it did not receive the assent of the Governor-General, and an amended Bill is

now under preparation. A new Opium Act was passed by the imperial Legislative Council in December 1876, but it has not come into operation, pending the issue of rules under section 8 of the Act for regulating the possession, sale, and transport of opium. A draft of these rules has been prepared by the Board, and is now under the consideration of Government. The cultivation of the poppy and the manufacture of opium are already regulated by Act XIII of 1857, and are not affected by the new law.

The revenue of the year under review showed an increase of Rs. 5,30,577, or 9·2 per cent. over the average of the past five years, and of Rs. 1,60,140, or 2·6 per cent., over the receipts of 1875-76. The subjoined statement shows the total collections of the years under comparison under the different heads of exciseable articles, with the fluctuations which occurred.—

ARTICLE.	REVENUE.			IN 1876-77, AS COMPARED WITH 1875-76.		IN 1876-77, AS COMPARED WITH THE AVERAGE OF 1871-76.

Opium	11,45,221	12,15,568	12,35,585	20,017	90,364
Miscellaneous	163	207	255	48	92
Total	57,16,482	60,80,919	62,47,059	2,65,708	95,626	6,13,091	82,514

The increase in 1876-77, as compared with the average of the previous five years, was chiefly in country-made and imported spirits, târi, chandu, spirits used for arts, ganja, and opium, against which must be set the heavy decrease under rum. Generally speaking, the improvement in the case of country and imported spirits and ganja was due to the auction system, and also, as regards the former article, to the gradual revival of the outstill system; in the case of târi to greater demand increasing the competition for licenses at the auction settlement; and under opium to the levy of fees for licenses to sell by retail, and also to the enhancement of the price at which the drug was sold to the public. The falling off in the revenue from rum was due to the increase in the rate of duty, to the importation of cheap brandies, and to large clearances made in February and March 1876 in anticipation of the increase in duty. The increase over the revenue of 1875-76 occurred in all articles except rum and chandu, and was due to the increase in the rate of duty on country spirits; and in the case of târi, pachwai, ganja, and opium, to increased license fees.

The charges of the department amounted to Rs. 2,96,295 in 1876-77, against Rs. 2,98,115 in the preceding year. There was a slight increase in the cost of the establishments employed; but this was more than balanced by reductions in the contingent charges. A sum of Rs. 215 was remitted on account of some shops in Noakholly which were destroyed by the cyclone. The unrealized balance of the year was Rs. 7,269, of which Rs. 6,541 were subsequently recovered and Rs. 761 were irrecoverable. The charges of the department decreased, and the percentage of cost showed a steady diminution. In 1874-75 the cost of collection was 5·3 per cent., in the following year it fell to 4·8, and in the year under review to 4·7. A high percentage still prevailed in some districts. In four districts—Bankoora, Bogra, Furreedpore, and Manbhoom—the cost of collection exceeded 10 per cent., and in Dinagepore, Noakholly, Mozufferpore, and the Sonthal Pergunnahs it was very nearly 10 per cent. The percentage was lowest in Balasore and Lohardugga, where it amounted to only 2·1 on the collections.

The revenue derived from country spirits is subdivided into the following heads:—

			Rs.
License fees (fixed duty system)	6,42,846
Ditto (monthly tax system)	2,94,626
Distillery fees	80,346
Still-head duty	15,98,581
Total	<u>26,25,399</u>

The receipts from license fees under the monthly tax system increased by Rs. 26,153, owing partly to higher prices being obtained for licenses, and partly to the greater extension of the outstill system, which has been found to be more suitable than the distillery system to thinly-populated tracts of country. The licenses granted under this system in 1876-77 were 782, against 747 in the preceding year. On the other hand the licenses under the fixed duty system decreased from 3,645 to 3,502, and the consumption from 2,611,323 gallons to 2,397,597 gallons. The license fees under the fixed duty system and the distillery fees naturally showed a decrease, but there was a large increase of duty, owing to the rates having been raised during the year in most districts of Bengal. Altogether the returns presented the satisfactory result of an increased revenue combined with a diminished consumption and a reduction in the number of shops.

The plan of taxing the materials used in distillation has been tried for some years in Behar, but the reports of its working are on the whole unfavourable. The rates, however, have hitherto been fixed much lower than the corresponding rates under the hydrometer system, and consequently the plan, while popular with the distillers, has not been profitable to the Government. The Lieutenant-Governor has authorized the levy of higher rates during 1878-79, and he will await the report of the results of that year before deciding whether the experiment shall be continued or not. In the district of Sarun a system of taxing the distillers' vats according to their capacity has been tried with some success.

The receipts from license fees for the sale of rum were very little below those of last year, but there was a great falling off in consumption, and consequently in duty. This was attributable principally to the duty having been raised to the same rate as that levied on imported spirits, viz. Rs. 4 per gallon.

There was a small increase in the number of licenses for the sale of imported spirits and wines, and a corresponding increase in the amount of license fees. The importations of foreign wines, spirits, and beer showed a considerable decrease, attributable partly to the unfavourable rate of exchange, and partly to the increase of duty under the new Tariff Act. This increase of duty, however, had the effect of raising the customs revenue from imported spirits from Rs. 8,73,964 to Rs. 9,83,210 in spite of diminished importations. The receipts from the duty on foreign wines declined from Rs. 3,73,068 to Rs. 3,19,070.

Under the heads of târi and pachwai there was an increase of revenue owing to the issue of licenses at higher rates. Care was taken to reduce the number of shops on the borders of the Sonthal Pergunnahs with a view to diminish the temptations to excessive indulgence in drink among the Sonthals. It appeared that the efforts of the local officers to check intemperance in the Sonthal Pergunnahs have met with a considerable measure of success. The minimum rate of license fee; however, for the sale of fermented târi and of pachwai was as low as Rs. 12 per annum, and orders have since been issued for increasing this rate.

The returns under the head of ganja during the last two years give the following results:—

			Number of licenses.	Consumption.			Revenue. Rs.
				Mds.	s.	c.	
1875-76	3,262	7,389	8	9	11,20,349
1876-77	3,130	7,458	22	5	11,97,116

The year under review, therefore, showed a decrease of 4 per cent. in the number of licenses, an increase of about 1 per cent. in the quantity consumed, and an increase of 6 per cent. in the revenue. There was not, however, any real increase of consumption in the Lower Provinces, as the exports to the North-Western Provinces, which are included in the figures given above, exceeded those of the preceding year by 110 maunds. The area of land cultivated with ganja increased in 1876-77, and the average production per acre was unusually high, owing to the favourable character of the season; the result being that the ganja crop amounted to 10,814 maunds, or about 4,300 maunds in excess of the previous year's produce. A careful inquiry into ganja cultivation and traffic was made during the year, under the orders of Government, by Deputy Collector Baboo Hem Chunder Kerr, and various measures for the improvement of the existing system have been approved by the Lieutenant-Governor, and steps are now being taken for their introduction. The duty on ganja will also be increased from the 1st April 1878. The duty on the Gurjat ganja consumed in Orissa has already been doubled from the 1st January 1877.

The experiment of levying a fee on licenses for the retail sale of opium was very successful, and it is proposed to extend it by selling these licenses generally by auction—a plan which has already been introduced into Calcutta and the suburbs. The revenue from opium license fees, which first appears in the returns for 1873-74, amounted in 1876-77 to Rs. 60,024. The number of licenses issued, and the quantity of opium consumed, are shown in the following table:—

	Average from 1871-73 to 1875-76.		In 1875-76.	In 1876-77.
Number of licenses	...	4,709	3,270	3,099
		Mds. s.	Mds. s.	Mds. s.
Consumption	...	1,776 15	1,752 17	1,736 19

Although the consumption of the drug declined during the year, the receipts showed a considerable increase, which was due partly to the more general levy of license fees, and partly to the enhancement of the selling price in several districts. In the Orissa Division the increase of price did not avail to check the growing consumption of opium, and it will be considered whether a further enhancement is not practicable. In Purneah also orders have been given to raise the price from Rs. 22 to Rs. 24. There was a slight increase in the sales of Government opium in the producing districts, and no serious cases of opium smuggling occurred during the year. Of madat and chandu, which are preparations of opium, the revenue from the former showed a small increase, while that from the latter decreased in consequence of the withdrawal of the license for the export of the drug to the Mauritius. Rules have since been issued to regulate this export.

During the year there were prosecutions under the excise laws in all the districts of Bengal, and of 2,420 persons arrested 2,032 (or 84 per cent.) were convicted, 360 of these being imprisoned and the rest fined. The great majority of the cases were of a trivial nature. The fines imposed during the year amounted to Rs. 38,825, of which the sum of Rs. 23,179 was realized. Rs. 16,252 were distributed in rewards to informers and apprehenders, and the amount sanctioned for special rewards was Rs. 2,047.

SALT.

There was an increase of Rs. 3,48,731, or 1·3 per cent., in the receipts from salt during the year under review. As compared with the four previous years, the results of 1876-77 may be shown as follow:—

					Rs.
1872-73	2,61,19,562
1873-74	2,59,92,661
1874-75	2,64,87,143
1875-76	2,53,41,925
1876-77	2,56,90,656

This increase was almost entirely due to the enhanced receipts from duty on imported salt cleared for consumption. There was a slight decline in the revenue from excise salt and in the receipts from

rowannah fees and miscellaneous receipts; but this was more than counterbalanced by an increase of Rs. 47,686 under the head of golah rents.

Salt supply.

The salt supplies for the past five years have been as follow :—

	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.
	Mds.	Mds.	Mds.	Mds.	Mds.
Quantity imported and manufactured...	75,31,304	78,41,600	82,98,081	1,00,24,736	82,66,990
Ditto cleared for consumption ...	79,81,286	79,44,247	81,99,389	79,14,513	81,07,022
Ditto in stock at close of year ...	23,23,766	20,59,418	20,87,317	41,53,880	42,50,816

There was a considerable decline during the past year in importations, which fell from 1,00,24,736 maunds to 82,66,990 maunds, or about the same quantity that was imported in 1874-75. The importation of 1875-76 was entirely abnormal, the actual clearances for consumption for that year having been below the clearances of the two years preceding it. The Calcutta imports in 1876-77 were 77,06,649 maunds, against 95,36,664 maunds, and the Chittagong imports 1,51,488 maunds, against 1,63,646 maunds in the previous year. In the case of Chittagong importation was checked by the general stoppage of trade consequent on the cyclone and storm-wave of the 31st October 1876, and also by the fact that the stock of salt in hand at the beginning of the year amounted to 1,95,527 maunds, or 45,211 maunds more than the average stock of previous years. The large decrease in Calcutta appears to have been due to the large quantity of salt left in stock at the close of the preceding year in consequence of the excessive importations of 1875-76.

As in the preceding year, the entire supply of Chittagong was derived from Great Britain, which also furnished 60,65,533 maunds of the Calcutta imports. A considerable increase occurred in the imports into Calcutta from Egypt, and a less conspicuous rise in the imports from Bombay. On the other hand the imports from Great Britain fell, for reasons already explained, from 74,91,833 to 60,65,533 maunds, and the Madras imports from 5,09,946 maunds to 1,91,714 maunds, while a smaller decrease occurred in the imports from France, the Arabian and Persian Gulfs, and Italy.

The return of salt conveyed by the several routes into the interior of the country showed a net decrease of 5,10,209 maunds in the amounts despatched by water, and an increase of 5,02,700 in the consignments by rail. The despatches by the East Indian Railway increased by 1,47,756 maunds, and those by the Eastern Bengal Railway by no less than 3,54,944 maunds.

The salt manufactured under the excise rules in the 24-Pergunnahs and the Orissa districts rose in the past year from 3,22,883 maunds to 4,07,974 maunds. In Pooree the increase reached the very large amount of 1,65,017 maunds, against

Excise salt.

which is to be set a decrease of 16,476 maunds in Cuttaek and of 65,808 maunds in Balasore. In the case of Cuttaek the diminished manufacture was due to the competition of cheaper salt from Pooree and Ganjam, while in Balasore the season was unfavourable, and large stocks of salt remained unsold in the district.

The increase in the amount of salt manufactured in Pooree appears to have been due to quite exceptional causes. During 1875-76 the weather was very unfavourable to the manufacture, and the molunghees were unable to work out the advances they had received from their employers. These advances, therefore, were carried on into 1876-77, and as the season was a good one a large quantity of salt was made. The fact, however, that the amount sold declined from 1,68,068 maunds to 1,33,303 maunds placed it beyond a doubt that the increased manufacture did not indicate a genuine revival of the Pooree salt trade, but merely proved that neither manufacturers nor molunghees were able to withdraw from the business without incurring a loss which they were as yet unwilling to accept. With regard to the molunghees, who derive their entire subsistence from salt-working, the salt trade of Pooree appeared to occupy an entirely different position to that of Cuttaek. In the latter district the decay of the salt industry is accompanied by the cultivation of cereal crops on land formerly reserved for salt-working and the diffusion of larger and more certain profits among the agricultural population. But in the tracts bordering on the Ohilka Lake the soil is unfit for cultivation, and the cessation of the salt manufacture deprives the people of their only means of subsistence.

The duties on salt manufactured in Ganjam have not been raised sufficiently to enable the molunghees of Pooree to compete on even terms with the Ganjam manufacturers. The condition of the people in both districts which border on one another is identical, and it can hardly be believed that the Madras consumers are not in a position to pay as much for their salt as the people of Orissa. In the meantime the discount of 5 per cent. allowed in Ganjam to all purchasers of not less than 1,200 maunds has been ordered to be discontinued, and the Pooree manufacturers have been relieved of the cost of the preventive establishment for guarding the aurungs during the season of manufacture. These measures may be found sufficient to afford some relief to the Pooree trade, and it may be hoped that both manufacturers and molunghees will be able in time to adjust their business to the new conditions under which it must be carried on.

The clearances of salt for consumption during the past year were as follow :—

	Quantity. Mds.	Duty. Rs.
Sales of imported salt from shipboard	57,94,742	1,84,11,563
Ditto ditto from bond ...	19,68,062	60,95,245
Sales of excise salt ...	3,44,218	9,43,292
Total ...	<u>81,07,022</u>	<u>2,54,50,100</u>

The clearances are the real test of the condition of the salt trade, not the importations—and these somewhat exceeded those of 1875-76 ;

but no less than 42,50,816 maunds were in stock at the close of the year—an amount more than sufficient to supply the whole of Bengal for six months.

The actual consumption in Orissa was 4,06,274 maunds, against 3,97,398 maunds in 1875-76. The sales of Orissa-made salt, however, fell from 3,40,987 maunds to 3,22,968 maunds, so that there remained a balance of 83,306 maunds to be supplied by imported salt from Ganjam. The total amount of salt imported from Ganjam into Orissa is not stated, but it is probable that it can hardly have been less than a lakh of maunds, as there is a considerable demand for cheap salt in the Tributary States.

The sales for consumption in the ten districts which lie within the salt law limits amounted to 13,73,796 maunds, being a net decrease of 19,822 maunds as compared with the sales of the previous year. The bulk of this decrease occurred in the districts of Backergunge, Noakholly, and Chittagong, and arose from the loss of life caused by the cyclone and storm-wave of the 31st October, and by the subsequent outbreak of cholera. It should be observed, however, that the amount sold for consumption in the saliferous districts, although less than that of the previous year, exceeded the consumption of 1874-75 by more than 10,000 maunds, and represented an average consumption of more than 10½ per head by the population within the salt law limits as returned in the census of 1872. In Chittagong there is said to have been some illicit manufacture shortly after the storm-wave, when the soil was strongly impregnated with salt; but this seems to have been only on a small scale for domestic consumption, and can have had no material effect upon the revenue. In Noakholly the operation of the salt rules was suspended for a month, with the object of giving relief to the distressed people by enabling them to supply themselves with salt.

The number of prosecutions instituted under the salt laws was 1,591, besides eight cases which remained pending from the previous year. This is an increase of 40·2 per cent. over the number of cases brought to trial in 1875-76; but as convictions were obtained in 96·5 per cent. of the cases, it is clear that prosecutions were not instituted on insufficient grounds. A sum of Rs. 9,223 was realized in fines and forfeitures, and Rs. 4,624 were distributed as rewards to informers and apprehenders. As usual, cases of illicit manufacture were most numerous in the 24-Pergunnahs and in Midnapore. In the former district the number of cases instituted rose by no less than 435, or 176·8 per cent., by reason of the greater attention paid to the salt law by the police and the consequent discovery of a large number of cases of illicit manufacture. The cases, however, seem to have been mostly of a trivial nature. Midnapore had 348 cases, being 23·6 per cent. less than in the previous year. This decrease is attributed to the more prosperous condition of the salt-producing tracts, which reduced the temptation to manufacture illicit salt. At the same time, where the soil is strongly impregnated with salt, it is to be expected that the lower classes will continue to manufacture for their own consumption. In Noakholly the number of cases rose from 43 to 210, but the majority were cases of

neglect to give up rowannahs; and the increase was due for the most part to the extension of the jurisdiction of the Fenny sub-division by the inclusion of the thana of Mirkaserai. There was a decrease in the number of salt cases in all the districts of Orissa, where illicit manufacture is comparatively uncommon, in consequence of the extensive production of salt under license.

STAMPS.

The general financial results of the administration of this branch of the revenue during the year, as compared with the results of the two previous years, are shown in the following table, in which the sale receipts of postage, service, and telegraph stamps are not included :—

	1874-75.	1875-76.	1876-77.
	Rs.	Rs.	Rs.
Bengal	87,88,028	91,82,860	93,91,094
Assam	4,72,591	5,03,462	4,84,179
Punjab	23,86,345	24,58,005	24,30,290
North-Western Provinces	35,15,382	34,90,859	36,24,364
Oudh	9,25,670	9,23,566	9,41,247
British Burmah	5,05,489	6,09,816	6,22,231
Port Blair	283	842	1,485
Nepal	14	5
Political Agencies	5,850	6,736	6,031
Total ...	1,65,49,650	1,71,83,162	1,75,10,511

The receipts from Bengal were more than equal to the revenue realized from the other provinces together, and the total shows an increase of Rs. 3,27,349 compared with the returns of 1875-76. There was an increase of more than two lakhs in Bengal, and of above 1½ lakh in the North-Western Provinces, besides smaller increases in Oudh and British Burmah; but the returns for Assam and the Punjab show a decrease in those provinces.

The following statement shows the gross revenue of the year in the Lower Provinces of Bengal under the several heads of receipt, as compared with the results of the three years immediately preceding :—

YEARS.	DUTIES UNDER GENERAL STAMP ACT.					Duties under Court Fees' Act.	Total under both Acts.
	Non-judicial stamped papers.	Special adhesive stamps.	Receipts, share transfer, and foreign bill stamps.	Hoondies or bills of exchange.	Total of general stamps.		
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1873-74	16,80,685	5,22,322	1,81,687	96,731	24,81,405	58,98,956	81,80,361
1874-75	16,93,308	5,58,256	1,91,761	97,914	25,41,239	62,46,787	87,88,028
1875-76	17,71,571	5,46,353	1,86,604	99,788	26,03,314	65,70,555	91,82,869
1876-77	17,03,845	5,46,324	2,00,969	98,378	25,39,536	68,52,158	93,91,094

It will be seen from this table that while there was a net increase of Rs. 2,08,825 in the total revenue in Bengal, this was entirely owing to the sales of judicial stamps, the revenue under the General Stamp Act showing a decrease of Rs. 63,778. Of the sub-heads of general stamps,

there was a satisfactory increase in the sale of one anna receipt stamps, showing that the provisions of the law regarding these stamps are more generally obeyed; but there was a serious falling off in the receipts from hoondee stamps, and a decrease of nearly 4 per cent. (Rs. 67,726) in the sale of non-judicial stamped paper. This result must be regarded as unsatisfactory, and no sufficient reasons are assigned to account for the diminished revenue of the year. The receipts from general stamps are now less than they were two years ago, while the duties under the Court Fees' Act have increased in the same time by more than six lakhs of rupees. It is not reasonable to suppose that litigation has so greatly increased concurrently with a decrease of those monetary and commercial transactions from which the general stamp revenue is derived; and it can only be inferred that the duties leviable under the General Stamp Act are systematically evaded, and that the measures taken to enforce the observance of the law have thus far proved ineffectual.

As the stamp receipts have now been made a part of the provincial revenues, the question is one which has an important bearing on the financial position of the local Government. The conditions imposed by the Government of India assume that the net stamp revenue will increase at the rate of $2\frac{1}{2}$ lakhs per annum. This expectation was not realized during the year under review, and it cannot be hoped that it will be realized in future if the revenue under the General Stamp Act remains stationary or shows a decrease. The receipts from judicial stamps may be temporarily swelled by the effect of the Land Registration Act; but it is evident that this item does not admit of indefinite expansion, and there are already indications that the normal increase of duties under the Court Fees' Act is approaching its limit. The financial safety of the Government as regards the stamp revenue cannot, it is believed, be assured unless the receipts from general stamps show an annual increase of at least $1\frac{1}{2}$ lakh, or (say) 5 per cent. per annum. There can be no doubt that if the law were generally observed the increase would be much greater than this; and it has been earnestly impressed upon the Board and upon all revenue officers that it is important to maintain a vigilant and strict supervision over this department of their duties.

The largest amount of stamp revenue was of course realized in Calcutta, but in each of the following districts the receipts exceeded three lakhs of rupees:—

DISTRICTS.	1876-77.			Total of 1876-76.	Total of 1874-75.
	General stamps.	Court fee stamps.	Total.		
	Rs.	Rs.	Rs.	Rs.	Rs.
Calcutta ...	7,58,858	8,62,076	16,20,934	15,67,909	15,58,118
24-Pergunnahs ...	88,083	3,57,404	4,45,087	5,14,842	5,21,255
Dacca ...	1,06,031	3,25,480	4,31,501	3,84,092	3,60,454
Jessore ...	71,118	3,42,719	4,13,837	4,15,990	4,00,052
Mymensing ...	1,03,382	2,97,972	4,01,354	3,87,231	3,82,752
Burdwan ...	58,242	2,62,474	3,20,716	3,10,782	3,06,888

The district of Dacca, which has hitherto stood fifth in order, now takes the third place. The unfavourable results of the year are shown by the fact that whereas last year nine districts returned receipts exceeding three lakhs, the number has now fallen to six, Midnapore, Backergunge, and Chittagong being excluded. The receipts in Midnapore have fallen from Rs. 3,05,366 to Rs. 2,63,822; those in Backergunge from Rs. 3,05,088 to Rs. 2,86,714; and those in Chittagong from Rs. 3,02,959 to Rs. 2,97,059. Again, the returns of last year showed 13 districts with stamp revenues below a lakh of rupees; but the number has now increased to 14, the receipts in Beerbhoom being only Rs. 94,702, against Rs. 1,06,647 in 1875-76.

The sales of postage, service, and telegraph stamps during the last four years are shown in the following table:—

			Postage.	Service.	Telegraph.
			Rs.	Rs.	Rs.
1873-74	15,15,614	4,16,354	14,30,620
1874-75	16,35,688	4,30,253	15,58,424
1875-76	17,22,063	4,33,263	15,81,671
1876-77	17,47,334	4,58,061	20,04,380

This steady increase in the sale of postage and telegraph stamps is a matter for congratulation, though some part of the increase under the head of telegraph stamps is attributed to the influx of business consequent upon the scarcity in Southern and Western India. The larger sales of service stamps are accounted for by the opening of additional public offices, involving an increase of official correspondence.

The actual sales of stamps in the Lower Provinces of Bengal, excluding postage, service, and telegraph stamps, amounted during the year to Rs. 93,91,694, as shown above. But the gross revenue from stamps, including duty on unstamped paper, adjudication fees, penalties, and some other smaller items of miscellaneous receipt, amounted to Rs. 94,18,536. The charges of the year were Rs. 2,26,004, and the refunds were Rs. 39,083, leaving a net stamp revenue of Rs. 91,53,449, against Rs. 89,47,092 in the year 1875-76. It is satisfactory to find that the charges of the department are not increasing; and it appears that the net revenue has risen about 2 per cent. during the year. But it has been observed above that the estimates of the Government of India assume a much larger increase than has been realized during the year under review.

In the matter of prosecutions instituted by local officers for infringements of the stamp law, the Board are of opinion that a creditable degree of watchfulness and activity has been shown by the officers concerned. The amendment of the stamp law is now under the consideration of the Government of India, and it may be hoped that many of the difficulties which are felt in working the present law will be removed by the proposed legislation.

Under a system introduced during the year, inspections of mofussil offices and courts are made from time to time by the Inspector-

General of Registration and the Inspectors subordinate to him, in order to ascertain whether the rules for the custody, sale, and defacement of stamps are duly carried out. The registration officers are stated to have rendered the Board very useful assistance, and it is anticipated that their inspections will greatly diminish the danger of the fraudulent removal of judicial stamps from records. Only two instances of the commission of a fraud of this kind are known to have occurred during the year.

VI.—VITAL STATISTICS AND MEDICAL SERVICE.

Births and Deaths.

THE collection of vital statistics, that is the registration of births and deaths, among the civil population has been hitherto carried on in Bengal under two systems,—the system of “general circles” and the system of “selected circles.” The returns for the general circles include the figures of the selected circles, and relate to the whole of Bengal; the thana, or some recognized subdivision of the thana, being the ordinary unit for rural, and the municipality or union for urban circles. The selected circles, on the other hand, are comparatively limited areas, in which a superior degree of accuracy in registration was sought to be obtained by the employment of special agency under closer supervision. The theory of this arrangement was that the selected circles would enable us to arrive at a correct knowledge of the *actual* rate of mortality among the civil population in different districts throughout the province; while the returns from all other circles, though inaccurate in themselves, would indicate in a general way the prevalence and distribution of disease, and the corresponding need of sanitary measures or precautions. It was expected that the selected areas would serve as examples of how registration ought to be conducted; that they would habituate the people to the duty of reporting births and deaths; and that their influence would continually tend to produce more accurate returns from the general circles within which they lie.

The sanitary authorities themselves, both of the Government of India and the Government of Bengal, have within the last few years come unanimously to the conclusion that the system of selected areas has not led to satisfactory results. Although the selected areas have throughout shown a higher reported death-rate than the general circles, there are strong grounds for believing that these more favourable results have been frequently artificially produced. In one district, for instance, the Civil Surgeon's clerk was found to have drafted a circular to the select thanas, informing the police that the Sanitary Commissioner was not satisfied with the number of deaths, and they were to “be sure to make the people die faster.” Even where there were no positive instructions, some such acceleration of reported mortality has been generally suspected; while the concentration of attention, even in a legitimate way, upon the work in the selected circles has been found to lead to neglect of general registration. Altogether the selected area system is believed

by every sanitary officer in the country to cost more than it is worth. A few district and police-officers were consulted on the subject by Government last year, and every officer save one pronounced in favour of the abolition of the system. The Government, however, were not then prepared to abandon it, in the belief apparently that the publication of the results in the *Statistical Reporter* would in time lead to some marked improvement in the registration. The returns of selected circles certainly formed a prominent feature in the columns of that publication. But with its discontinuance there is now no object in harassing the Sanitary Commissioner with the monthly or quarterly compilation of these special returns; while as regards the maintenance of the system for the purposes of the annual report, the figures given in the Sanitary Commissioner's report for 1876 seem conclusively to show its practical inutility. The figures in the general circles have improved yearly from the very commencement of the mortuary registration system; but in the year 1876, which is conspicuous for a marked extension of the system of selected circles, the registration in these circles has actually deteriorated, while it has never from the first shown any very marked advance. The rate of mortality per thousand of population recorded in the general and selected circles has been as follows:—

						General.	Select.
1873	7·77	24·82
1874	8·42	24·72
1875	10·01	24·80
1876	16·40	23·15

No doubt a death-rate of 16·40 per thousand is very inadequate; but the rate recorded for the selected circles is only 23·15 per thousand. The difference is certainly not sufficient to warrant the maintenance of the system, or of any special agency on that ground alone; and the Sanitary Commissioner has therefore been directed to take immediate measures to dispense with the services of all special agencies that may anywhere be employed, and arrange for the collection of vital statistics by the same machinery that is used in the general circles. Municipalities and towns must of course continue to be treated distinctly, and will remain a kind of selected circles, but the general circle unit should be the thana.

It is to be hoped that by a cordial and intelligent co-operation on the part of district officers, civil surgeons, and police-officers, the vital statistics of the general circles will continue to show improved results, though it is hard to believe that for many years to come there is any prospect of obtaining really reliable registers. It will probably be a long time before the penal provisions of Act IV (B.C.) of 1873 can be enforced in rural circles; but the Act itself is in force in 84 towns and municipalities, and might very well now be more firmly, though judiciously, pressed in some of the more advanced towns and unions. Elsewhere the district officers must make the best use of the agency at their disposal. Besides the agency of the ordinary police and ohowkidars, in Behar the putwaris, and in many parts of Bengal the punchayets under Act VI (B.C.) of 1870, as well as schoolmasters, pundits, and similar intelligent persons, might be utilized either to collect or to supervise the collection of vital statistics within limited areas. There.

is not a district in which a little trouble and care on the Magistrate's part would not ensure better results.

The recorded deaths throughout the province during the year were 983,400, as against 600,104 last year. The increase is ascribed solely to better registration, as apart from the calamity of the cyclone-wave and the subsequent cholera the year was not in any way an exceptionally unhealthy one. The rate of mortality was 16·40 per mille, against 10·01 per mille in 1875. (The above figures do not include the numbers born dead, reported at 16,469.) The number of registering circles was increased from 726 to 1,263 by subdividing areas, so as to make registration less troublesome to the people. The results were, however, compiled under 666 main circles.

Twenty-one out of 44 districts were pronounced by local officers healthier than in former years, and, save in the cyclone districts, there was no exceptional mortality, so that no doubt can exist as to the real advance made in registration. The districts which contributed most to the mortality of the year were—

From Cholera.	Deaths per 1,000.	From Fever.	Deaths per 1,000.	From bowel complaints.	Deaths per 1,000.
Noakholly ...	20·34	Dinagepore ...	22·05	Balasore ...	5·04
Darjeeling ...	18·30	Beerbhoom ...	18·89	Cuttack ...	3·02

		Darjeeling ...	12·07		

The following statement indicates the relative fatality of the principal diseases per thousand of population, as deduced from the returns of the selected circles for the last three years, and of the general circles for 1876 :—

					SELECTED CIRCLES.			GENERAL CIRCLES.
					1874.	1875.	1876.	1876.
Cholera	2·36	2·86	3·35	3·27
Small-pox	·68	·22	·39	·17
Fevers	14·31	14·58	13·09	9·36
Bowel complaints	2·41	2·44	1·86	97
Injury	·54	·46	·99	·90
All other causes	4·40	4·21	3·45	1·69
Total ...					24·72	24·80	23·15	16·40

The increased mortality from cholera is attributed to exceptionally severe outbreaks in the districts of Noakholly, Backergunge, and Chittagong after the cyclone of October last.

The returned mortality from fever, though comprising 58 per cent. of the total casualties, does not in the opinion of Dr. Coates, the

Sanitary Commissioner of Bengal, represent more than half the real fatality of this disease. There was what is thought to be a real decrease, however, in small-pox. The excessive death-rate from injuries was caused by the cyclone.

The extent to which the four chief causes of death prevailed in Bengal, Behar, Orissa, and Chota Nagpore is shown thus:—

	RATIO OF DEATHS PER 1,000 FROM—				
	Cholera.	Small-pox.	Fever.	Bowel complaint.	All causes.
Bengal	4.12	.11	10.24	.74	17.83
Behar	1.71	.25	8.18	.86	13.10
Orissa	5.54	.38	6.95	3.51	23.02
Chota Nagpore	2.15	.17	9.62	1.63	15.51

It will be observed that cholera was comparatively more fatal in Bengal and Orissa, fevers in Bengal and Chota Nagpore, and bowel complaints in Chota Nagpore and Orissa. This result accords fairly well with the popular estimates of the comparative healthiness and liability to special diseases of the four great divisions of Bengal.

The variation of the rate of mortality according to season is shown thus:—

SHOWN thus:—

Deaths.			Ratio per mille.	Deaths.			Ratio per mille.	
November	139,734	2.33	August	...	72,271	1.20
December	129,716	2.16	September	...	71,184	1.18
April	89,580	1.49	March	...	60,352	1.15
October	82,462	1.37	June	...	68,810	1.14
May	75,360	1.25	January	...	58,395	.97
July	74,077	1.23	February	...	52,459	.87

The usual disproportion between the number of deaths among males and females has been slightly reduced during the year of report. In the general circles it is stated that there were 99 females living to every 100 males; but the registered mortality shows 128 male deaths to every 100 female deaths, as against the ratio of 132 to 100 recorded in 1875. In the selected circles there are 101 males living to every 100 females, and among the deaths registered the proportion of males to females is as 120 to 100. There is still a serious deficiency in the registration of female deaths, but the superiority of the selected areas in this respect is by no means marked.

The registered rates of mortality per thousand among the various classes of the population are as follow:—

	GENERAL CIRCLES.		SELECTED CIRCLES.	
	1875.	1876.	1875.	1876.
Christians	16.28	19.51	27.17	26.03
Hindoo	9.91	15.47	24.62	22.70
Mahomedans	10.20	18.52	26.60	24.55
Buddhists	18.69	23.93	32.60	39.71
Other classes	9.91	13.69	13.72	19.64

Excluding Christians and Buddhists, in whose case the smallness of the populations dealt with tends to produce apparently abnormal rates of mortality, it appears, supposing the returns to be of any value, that Mahomedans are less healthy than Hindoos, and that those who come under the denomination of "other classes" are healthier than either Hindoos or Mahomedans.

The following statement compares the mortality per thousand of the population of the town of Calcutta in 1876 with the general average mortality of the town of the selected circles throughout Bengal:—

	Calcutta.	Town selected circles.		Calcutta.	Town selected circles.
All causes ...	30.18	32.98	Bowel complaints ...	4.33	4.02
Cholera ...	4.30	5.52	Injury47	1.12
Small-pox16	.64	All other causes ...	10.73	5.77
Fever ...	10.15	15.87			

It has now been established that the registration of deaths in Calcutta approaches very nearly to absolute correctness; and the fact that the average death-rate of the selected urban circles exceeds the Calcutta rate of mortality tends to prove the correctness of the registration of those circles. The last report of the Health Officer for Calcutta has, however, placed it beyond a doubt that the recorded mortality of that town is altogether exceptional, as it fails to show the deaths which occur among the floating population, who leave the town to die at their homes after contracting the seeds of disease in Calcutta itself. Dr. Coates expresses his belief that the actual mean death-rate of the provinces lies between 35 and 40 per thousand. But very little importance can be attached to these speculations. Nothing accurate is known, or can for years be known, of the actual mortality of the country: all that can be done is gradually to endeavour to construct a system of statistics which it is hoped may some day, as the people become used to it, lead to conclusive results. In the meantime, what can be definitely determined is that certain seasons and certain years are more unhealthy, and are attended with greater mortality, than other seasons and other years; and this conclusion must be based on general reports of the state of public health rather than on figured statements.

The collection of birth statistics in the general circles was attempted for the first time during the year 1876. In forty districts 575,579 births were registered, giving an approximate birth-rate on the population of 18.22 per mille. The males were to females as 117 to 100. But it was in only thirteen districts that births were registered during the *whole* twelve months. In these districts the death-rate was 16.91, and the birth-rate 14.65—a very encouraging beginning, showing that the people are not so suspicious of registration as they were in 1870, when the first returns of general death registration gave a mortality of only 3.92 per thousand.

In the selected circles birth registration, like mortuary registration, shows a falling off this year, giving only 22.58 births to the thousand, against 24.07 last year: males were to females as 114 to 100. The average English proportion is 104 males to 100 females. There is

nothing in these figures, as compared with those of general circles, opened this year for the first time, to warrant maintenance of the select circle agencies. The birth-rates among the various classes stand thus:—

Budhists	46·97
Other classes	28·09
Christians	26·99
Hindoos	23·09
Mahomedans	20·55

Cholera was present in Bengal during every month of 1876, and appeared in every district. Out of 666 circles it was absent only from 19, and it attacked 27,242 out of 188,805 villages in the province. It caused 196,590 reported deaths, or 19·93 per cent. of the total mortality of the year: the deaths were 1·47 per thousand more than in 1875. After allowing for improved registration, the district returns leave no doubt that in some tracts there were altogether exceptional outbreaks of this disease in 1876. This is known to have been the case in Noakholly and other districts affected by the cyclone. But the same fact is found in Darjeeling, where cholera raged among the tea gardens; in Balasore, where it broke out at Chandbally, now a busy port for native passengers; in Furreedpore, where it was remarkably virulent; in Pooree where, as usual, the pilgrims suffered; and in several other districts, chiefly of Bengal proper. The special attention of Civil Surgeons and Magistrates in each of these districts has been drawn to the causes, so far as these have been traced and found to be preventible. In Darjeeling and the Terai, for instance, there can be no doubt that much can be done, and has been done, to remedy the insanitary state of the gardens.

Cholera showed the same characteristics of seasonal prevalence as in former years, there being in Bengal and Orissa two periods annually in which it rages most fatally, viz. from March to May (in Bengal), and from March to July (in Orissa), and again less intensely from October to December. In Behar and Chota Nagpore the worst months are March to July or August, and there is no special winter outbreak. Heavy rain seems to stop the disease, at least in Bengal.

There was no general epidemic of small-pox during the year, but it was reported in 460 out of 666 circles, though only in 30 was the outbreak severe. The registered deaths were 10,746, against 5,280 in the previous year, the increase being entirely attributed to better registration. As usual, the hot months showed most of the disease, Behar and Orissa suffering most as provinces. But the districts that were worst were Patna, Cuttack, Monghyr, Lohardugga, Mymensing, Noakholly, Gya, Chittagong, Midnapore, Sarun, Singbhoom, and Hooghly, in the order named. Dr. Coates's general conclusion is that vaccination is gaining ground, though only by slow degrees. The officers of the Vaccination Department appear to have done all in their power to induce the people to adopt it.

As usual, the recorded mortality from fevers exceeded that from any other disease. No less than 561,530 deaths, or 9·36 per thousand, are reported to have occurred from this cause during 1876. The number in 1875 was 368,087, or 6·14 per thousand of the population.

The large increase of nearly 200,000 is entirely attributed by Dr. Coates to greater accuracy of registration; and the fact that the increase has taken place mainly in the rural areas of the general circles gives support to this view. The comparative rates of mortality from fever in the fever divisions of Bengal are shown thus:—

Bengal proper	10·24
Chota Nagpore	9·62
Behar	8·18
Orissa	6·95

This seems to confirm the ordinary opinion that Bengal proper and Chota Nagpore are considerably more feverish than Behar and Orissa. But it must be remembered that the people are disposed to classify all kinds of inflammatory disease as fever.

The Burdwan fever has disappeared from that district after having caused in seven years a recorded mortality of 78,970, bringing 4,073,039 persons under medical relief and costing Government Rs. 5,27,632. To make these figures of any value, it would be necessary to know the number of deaths in previous years from fever, which has always been a fruitful cause of death in this district. In Midnapore and Hooghly the disease was much less than in former years, and it seems to be rapidly disappearing. It is said of Hooghly that “the epidemic fever, which in former years was so bad in this district, did not appear in severe form this year.” In Midnapore it is said that “the epidemic fever of this district continued to prevail this year, but with much less intensity and fatality. It commenced declining from the beginning of the year, and by June it almost disappeared.” Of Burdwan it is recorded “the disease that was distinguished by the name of Burdwan fever is a thing of the past in this district this year also.” It does not appear that this is the result of improved drainage. No doubt the remedy is really in the hands of the people. If it be true that this fever arises from the dampness of the soil and want of house drainage, the people of these districts should do what is done in Rungpore, Burmah, and other places subject to the same causes of disease,—sleep on raised beds or platforms of bamboo, or build houses of bamboo well raised from the ground. At present the people do nothing, and make no attempt to help themselves, and appear to believe that it is the duty of Government to undertake house-drainage and the construction of sleeping platforms in all the houses of many of the largest villages of Bengal. If such a duty were really a proper function of Government, it could only be carried out by imposing upon the province a large and heavy taxation. If the villagers will help themselves, they may make their villages dry, so far as this is possible in Bengal, at a very slight expense; and at all events they can make their houses very much drier than they are. Where fevers are caused by local obstructions to drainage, the Lieutenant-Governor has indicated in a recent circular what remedies are open to the people in the provisions of the Embankment Act.

Bowel complaints are debited with 58,701 deaths, or ·97 per mille of the population. They were naturally most frequent in Orissa among the ill-fed, ill-clad pilgrims.

The deaths by injury in 1876 numbered 40,151, being just six times the number that occurred in the previous year. This abnormal increase was due to the loss of life caused by the cyclone and storm-wave in Backergunge, Noakholly, and Chittagong, the recorded number of deaths in that calamity being 34,173—a figure which, large as it is, is far within the early estimates of the extent of this calamity.

Shortly before his departure from Bengal Sir Richard Temple issued orders appointing a committee to inquire into the obstructions to drainage in the districts around Calcutta, with the view chiefly of testing by local inquiry the theory advanced by Rajah Digumbur Mitter regarding the causes of the severe fever which had for some years prevailed in this province. The Rajah maintained that by the construction of roads and embankments the natural drainage of the country had been obstructed, and that this was the sole cause of the fever. But it had been demonstrated again and again that the fever had prevailed in villages and in parts of the country with which roads and railways could have had no possible concern. On the other hand it was believed that this theory was right in some degree, and that artificial obstructions had in many cases occasioned, and in others aggravated, the outbreak of fever. It was the original intention of Government that the function of the committee should be to inquire whether in certain specified villages the theory of Rajah Digumbur Mitter held good absolutely, as he maintained it did.

The committee were accordingly instructed to proceed to examine Seebpore, Bally, and Connagurh, the places mentioned in the Rajah's memorandum, and to inquire carefully into the condition and sanitary history of these villages.

The report of the committee left matters exactly in the position where they were. The inquiry showed that the artificial obstructions to which the Rajah referred, such as the filling up of the Chowdhry's Gurh in Seebpore, the construction of metalled and kutchra roads in Bally and Connagurh, &c., had little connection with the outbreak of fever in those localities. On the other hand the committee could not dispute the position that the saturation of the subsoil in the deltaic districts of Bengal was one chief cause of fever, or that this saturation might have been aggravated of late years by both natural and artificial changes.

Even were the measures which Government ought to adopt clear and indisputable, the financial condition of the province prevents it from undertaking anything like a general system of district drainage at the cost of the public revenues. The attention of the district officers and municipalities has, however, been invited to the provisions of the Embankment Act and of Act VI (B.C.) of 1873, so far as these furnish a means of improving the drainage of towns and village sites, and they have been directed to devote special attention to this branch of conservancy. The Public Works Department has also been warned to see that in all projects for roads careful attention is paid to the question of drainage, and that wherever existing roads and works injuriously affect the outfall such measures as are practicable are taken to remedy the defect.

Emigration.

IN colonial as in inland emigration the operations of the past year show a remarkable falling off compared with the results of previous years. The number of emigrants despatched to the colonies was 24,569 in 1873-74, 20,230 in 1874-75, 9,251 in 1875-76, and only 7,734 in 1876-77. The stimulus experienced in the two former years was undoubtedly owing to the scarcity, which was to some extent felt in all the districts from which the great majority of the recruits for transmarine emigration are collected; but, on the other hand, the plentiful harvests of the past two years will not entirely account for the remarkable slackness in colonial emigration which has since supervened. The last annual report of the Superintendent of Emigration shows that Assam is beginning to compete successfully with the colonies in procuring labourers from Behar and the Upper Provinces. Unfortunately the statistics show that with increasing demand for labour both in this country and abroad, and competition among recruiters, the supply, though practically unlimited, is becoming less and less accessible, and that greater inducements are year by year becoming necessary to prevail on the people to leave their homes.

The decrease in the number of emigrants to the colonies is a matter for regret. It would, no doubt, be a great gain to the country if the yearly demands of the British colonies at least could be fully met. The greatly improved circumstances of the many labourers who return to their homes with considerable savings, enlarged ideas, and some education, show how great are the advantages to the Indian emigrant of a short residence in the colonies. One emigrant recently returned from a stay of twelve years in Trinidad with savings amounting to nearly Rs. 17,000, besides a quantity of valuables. During the past year no less than 254 persons again emigrated, and in addition to these 14 paid their own return passages to Demerara and eight to Trinidad. There can be little doubt that if recruiting operations were generally conducted with ordinary moderation and honesty the full number of labourers annually required for the British colonies could be procured.

The subjoined table shows the most prominent results of the year's operations compared with those of the two previous years:—

	1874-75.	1875-76.	1876-77.
Number of emigrants required by the colonies	14,760	12,965
„ „ admitted to the depôts ...	23,393	11,126	9,417
„ „ despatched to the colonies ...	20,230	9,251	7,734
„ „ returned from ditto ...	3,534	2,674	2,931
„ „ rejected or released from depôts...	1,560	826	1,155

			1874-75.	1875-76.	1876-77.
Percentage	6.6	7.41	11.84
Number absconded from depôts	1,178	660	509
Percentage	5	5.93	5.21
Death-rate per cent. in depôts	33	26	41

Altogether 306 licenses were granted during the year to the emigration agents of six colonies, against 326 to six agencies in the previous year. In 1876-77 12 licenses were cancelled, against 21 in 1875-76. This, however, cannot be accepted as evidence of an improvement in the conduct of those employed in collecting emigrants. The nature of their business, and the very extensive area over which their operations are conducted, have rendered it impossible for the emigration agents to exercise anything like efficient local control over their recruiters. They have been compelled to employ sub-agents to look after their interests in the principal recruiting centres. The existing law contains no provision for the recognition and control of those persons; nevertheless their employment is absolutely necessary, and it is by their honesty and vigilance, rather than by the good will of the emigration agents, that the operations of the recruiters can be effectually controlled. Hitherto, unfortunately, these qualities have not been exhibited by them, and they have in many instances taken advantage of their irresponsibility under the law to countenance, if not to suggest, malpractices on the part of the recruiters. Mr. Eden has decided that, pending the amendment of the law, these sub-agents should be made amenable to control by requiring them formally to take out licenses as recruiters. At the same time Magistrates have been instructed not to enforce in their respect the section of the law which requires recruiters to wear badges.

The returns for the past year show that the action of the local sub-agents has been positively mischievous. Out of 9,755 persons received in depôt, including 338 remaining from the previous year, no less than 1,155, or 11.84 per cent., were either rejected by the medical inspector or emigration agents or released from their engagements by the Protector. The percentage of rejections and releases ranged from 4.96 in the Natal agency to 17.11 and 17.69 in those of Trinidad and Guadeloupe respectively. The increasing number of coolies released or rejected at the depôts appeared to Mr. Eden to call for the adoption of special measures against the recruiters and sub-agents concerned, and the Protector of Emigrants was accordingly desired to note carefully in future the name of the recruiter and sub-agent through whose hands each labourer who absconds on the way to Calcutta or from the depôts, or who is rejected or released, has passed, in order that the licenses of all shown to have participated in the recruitment of any large number of labourers subsequently found unfit or unwilling to emigrate might be cancelled.

The total number of emigrants received in depôts actually exceeded by 1,342 the number shown by the Magistrates' reports to have been originally registered. As without a knowledge of the number originally recruited, and of the number who abscond on the way to Calcutta, it is impossible to gauge the extent to which improper recruiting is practised, it was pointed out to the Magistrates that the

law requires them, on registering emigrants, to submit to the Protector copies of the entries made by them. The attention of all district officers in Bengal has again been directed to this important matter, and other Governments have been addressed with a view to the issue of similar orders.

Of the labourers received in the depôts, 5·21 per cent. absconded.

Depôts.

This result was attributed to the large number (14·22 per cent.) of desertions among the coolies recruited for Mauritius. Altogether 40 deaths, or ·42 per cent., occurred among the coolies after admission to depôt. As the average duration of detention in depôt was only 29·2 days, the death-rate amounts to 52·8 per mille per annum, which is high for a class supposed to be specially selected. Dr. Grant, who held the office of Protector throughout the year, was perfectly satisfied with the cleanliness of the depôts and with all the arrangements made for the health and comfort of the emigrants. Judged by the returns, it would seem that the operations of the Natal agency were most satisfactorily conducted. That depôt showed by far the lowest percentage of rejections and releases and of desertions, and no deaths occurred among the 806 emigrants admitted to it. Emigrants were detained on the average 29·2 days in the depôts, so that the provisions of the rule which requires the despatch of emigrants within one month of admission to depôt if possible were in most instances complied with. In the Mauritius agency, however, the average length of detention was 41 days.

At the beginning of the year the Mauritius, Demerara, and Guadeloupe agencies had still a number of women to despatch in order to make up the required proportion of 40 per cent. The Mauritius agency made up its deficiency in full during the year; that of the Demerara agency was reduced from 115 to 40. No surplus of women was despatched to Guadeloupe, and the deficiency remained at 192 at the close of the year.

The total number of labourers required by the several colonies, British and foreign, during the year under review was 12,965 statute adults. Of this only 7,138½ statute adults were despatched. The colony of

Proportion of female emigrants.

Jamaica did not require any labourers during the year. The prohibition on emigration to Cayenne or French Guiana, and to Surinam or Dutch Guiana, continued in force. Trinidad was the only colony which succeeded in obtaining the full number of emigrants required. To Demerara and Mauritius not much more than half of the number which those colonies sought to obtain was despatched. Natal could only procure 715 out of 2,730 indented for. This colony has obtained a number of labourers from Madras, but in Bengal it appears unable to compete with Mauritius and the West Indian Colonies, which are better known to the people. The latest information shows that since the Commission of 1872 submitted its report the condition of the Indian labourers in Natal has been most satisfactory. A retired Indian officer has been appointed Protector of Immigrants, and many of the labourers who have worked out their term of indenture have adopted lucrative trades in the neighbourhood of the chief towns. It is probable that as its excellent climate, comparative proximity to India, and general

Requisitions for emigrants.

prosperity, are more generally known, Natal will have no difficulty in procuring the labourers it requires.

The condition of Indian subjects in Cayenne and Guadeloupe is a matter for grave concern. One of the great inducements to labourers to proceed to those colonies has hitherto been the promise of a free return passage after five years of service. Recent reports, however, show that this advantage is not really enjoyed. On the 25th February 1876 there were 13,543 adult Indian immigrants in Guadeloupe, of whom a large number must have completed their term of indenture and become entitled to return passages. During the year 1875 no less than 1,200 immigrants terminated their engagements. It has been stated that all these renewed their engagements; but it is a remarkable fact that during the past five years no Bengal emigrants have returned to their homes from Guadeloupe. In Cayenne it appears that the coolies only labour 14 days in the month. There must clearly be something wrong in the system of tasks and payment for work, for no labourer works more willingly than the Indian if it is made his interest to do so. The experience of the other colonies shows that with liberal rates of wages the coolies are excellent and industrious labourers. The result of the system pursued in Cayenne is that the immigrant's first indenture for five years, or 1,560 days, cannot expire until he has passed some ten years in the colony, and that he is as poor at the end of the term as he was at the beginning. It appears, moreover, that the privilege of a free return passage is withheld after it has been earned. The British Consul reports that throughout the years 1875 and 1876 there were 238 immigrants awaiting an opportunity to return to India, yet that not one was able to leave the colony, though it is evident that the number was sufficient to fill a vessel if one had been chartered for their use. There were at the close of the year nearly 4,000 Indian labourers in Cayenne, and it is feared that the condition of all is far from satisfactory.

The death-rate on board those vessels whose arrival in the colonies has been reported was not high, averaging only 1·38 per cent. The highest mortality, 2·75 per cent., occurred among the emigrants despatched by the *Jorawur*; more than half the deaths in that instance were caused by measles and their sequelæ. The Lieutenant-Governor inquired into the case, but it did not appear that any blame attached to the medical inspector under whose superintendence the emigrants embarked.

Altogether 2,931 emigrants returned from the colonies during the year. The average savings of those from Trinidad amounted to Rs. 379-5-6, and the general average was Rs. 178-0-1. In no instance was the death-rate on board the return vessels exceptionally high, though of course many of the passengers were invalids.

The number of labourers and dependents despatched to the tea districts during the year was 24,317, against 29,314 in the previous year and 21,690 in 1874-75. Of the above number 18,239 proceeded to Assam, and the remainder (6,078) to Cachar and Sylhet.

Nineteen contractors took out licenses during the year. Of these one died, and two were punished, for irregularities on the part of their subordinates and want of care in the conduct of their business, by the cancellation of their licenses. At the end of the year there remained sixteen contractors at work, against eleven at the same period in the preceding year. Eight hundred and forty-two recruiters were licensed during the year, against 766 in 1875-76. The licenses of 37 of the former were cancelled, while 43 recruiters' licenses were cancelled in the previous year.

The total number of labourers and their dependents registered during the year was 26,581, against 33,175 in 1875-76. Of these 3,785 were recruited by garden sirdars and escorted by them to Assam *via* Dhubri, against 2,516 in the previous year. Of 22,796 registered for transmission through Calcutta 4,944 were conducted to their destination by garden sirdars without resort to depôts. Of the 17,852 who were registered for despatch through depôts 13,539 were collected by recruiters and 4,313 by garden sirdars. Of these 70 (of whom 63 were produced by recruiters and 7 by sirdars) declined to emigrate after registration and were left behind, and 330 in all, or 2·24 per cent. of the recruiters' and 0·60 per cent. of the sirdars' labourers, absconded on the way to Calcutta. The number of labourers who actually arrived in depôt was 17,434, of whom 13,169 were of the first class and 4,265 of the second. The medical inspector finally rejected 515, or 3·60 per cent., of the former, and 141, or 2·72 per cent., of the latter. No less than 701 of the recruiters' labourers obtained their release from the Superintendent of Emigration as unwilling to emigrate, and 72, or 1·39 per cent., of those collected by garden sirdars were similarly discharged. Of the former class 1,053, or 7·36 per cent., and of the latter 169, or 3·26 per cent., absconded from the depôts.

These results are unsatisfactory, and show that concurrently with a considerable decrease in the number of labourers recruited and despatched there has been a large increase in dishonest recruitment and not a little laxity in the local medical inspections. From the following table it would seem that abuse and neglect of the provisions of the law are on the increase :—

	1875-76.	1876-77.
Number registered after medical inspection for Calcutta depôts	22,878	17,852
Absconded	5·12	8·59
Unwilling to proceed	1·26	4·34
Rejected by the medical inspector at Calcutta	2·14	3·36

The large and increasing percentage of rejections at Calcutta shows very clearly that the civil surgeons of the recruiting districts do not conduct their examinations with sufficient care. Instructions have been issued with a view to the Government being informed in future of the districts in which rejected labourers were originally passed by medical officers. The number of labourers who either absconded on the way to Calcutta or from the depôts, or declared themselves before the Superintendent unwilling to proceed, was also very great, and gave evidence of improper practices in the process of recruiting. A record of the measures taken in consequence will best find place in the report for 1877.

Altogether 20,724 emigrants embarked at Goalundo, against 26,884 in 1875-76. 'This includes 3,803 sirdars' coolies who did not resort to depôts either at Calcutta or at Goalundo, and 1,101 of the same class who here first presented themselves and were accordingly placed under observation for four days. Of the total number embarked 5,935 were alleged to be *dhangurs*, 5,250 were Bengalis, 4,700 Beharis, and 1,036 natives of other parts of India, including a number of persons from the distressed districts of Madras. The Beharis formed 27 per cent. of the total number of emigrants, against 19 per cent. in 1875-76; and there were many families amongst them. This increase in the number of Behari emigrants to Assam is synchronous with a decrease in colonial emigration, in which this class of labourers has generally taken the chief part. The death-rate at Goalundo was .15 per cent. among recruiters' labourers and .13 per cent. among sirdars' labourers from Calcutta depôts. The death-rate among the last-mentioned class was 1.38 per cent. in 1875-76. Among the sirdars' emigrants who had not visited the Calcutta depôts the mortality was 1.31 per cent. It should be remarked, however, that these emigrants were detained on the average four days and nine hours, while the average detention of the other two classes was only 23 and 25 hours respectively. This class of emigrants was chiefly composed of *dhangurs*. The mortality among the Beharis was only .02 per cent., among the Bengalis it was .09, while among the *dhangurs* it was .55.

With a view to obviate complaints of the detention of steamers at Goalundo for the embarkation of emigrants proceeding to the labour districts of Assam, &c., and to allow the officers of the Emigration Department sufficient time to make the necessary arrangements for the despatch of emigrants from Calcutta to Goalundo and for their embarkation at that place, it was considered necessary to fix a period after the receipt of notice of arrival of steamers at Goalundo within which the arrangements for embarkation should be completed. No formal rule was laid down, but it was directed that the Emigration Department should be allowed a period of 36 hours after the receipt of notice of arrival of steamers at Goalundo in the cold weather, and 24 hours in the hot weather, within which the emigrants should be despatched from Calcutta and embarked on board the steamers by which they were to proceed. It was provided, however, that if notice of arrival of a steamer was given after 3 P.M. the interval allowed should be held to commence from the morning of the succeeding day. The above arrangement was accepted by the Indian General Steam Navigation Company, the owners of the steamers plying on the Assam line, and was also concurred in by the Chief Commissioner of Assam. The Superintendent of Emigration, Calcutta, was requested to instruct the Embarkation Agent at Goalundo to survey the steamers immediately on receipt of notice of their arrival, and telegraph to him the number of emigrants to be despatched from Calcutta. It was added that in no case, with proper arrangements, should the steamers be detained beyond the period fixed, and that should any delay occur on any occasion in the embarkation of emigrants the Superintendent should report the matter to Government, with full explanation of the cause of such delay.

The river passage from Goalundo was somewhat healthier in 1876-77 than in the previous year, the mortality from all causes being 1·46, against 1·70 per cent. It is noticed that 70·7 per cent. of the trips were free from cholera, against 74·6 per cent. in 1875-76. Nevertheless the number of deaths from cholera (146 out of 14,646 labourers) was considerable.

The statistics of emigration through Dhubri are given below. The death-rate on the river passage from Dhubri was only ·89, against 1·44 among the Goalundo coolies. It is difficult to establish an exact comparison, but the general drift of the evidence supplied is to show that emigrants marched by land to the Upper Brahmaputra and there embarked are less subject to disease than those who pass by rail through the Gangetic Valley and ascend the Brahmaputra from Goalundo.

Medical Relief.

THERE was a slight falling off during the past year in the number of patients treated at the different medical institutions of Calcutta and its suburbs. The number, however, was still much greater than that attained in any year before 1875. The following table shows the extent to which the public resorted to the different hospitals and dispensaries during the past three years:—

	1874.			1875.			1876.		
	In-door.	Out-door.	Total.	In-door.	Out-door.	Total.	In-door.	Out-door.	Total.
1. Medical College Hospital.	4,349	45,199	49,548	4,456	45,374	49,830	4,352	44,679	49,031
2. General Hospital ...	2,826	1,107	3,933	3,234	9,544	12,778	3,909	16,293	20,202
3. Mayo and Chandney Hospitals and Dispensaries.	1,004	155,611	156,615	2,006	191,759	193,765	2,029	187,661	189,690
4. Campbell Hospital ...	7,558	...	7,558	7,782	7,782	6,640	...	6,640

6. North Suburban Hospital.	711	711	625	...	625	635	635
7. Sumbhoo Nath Pundit Dispensary.	9,608	9,608	9,907	9,907	6,475	6,475
8. Alipore Dispensary...	130	9,092	9,222	119	5,968	6,087	110	4,495	4,605
9. Arratoon Apcar Dispensary.	8,858	8,858	9,539	9,539	9,559	9,559
10. Howrah General Hospital.	2,003	15,631	17,633	2,245	18,024	20,269	2,340	18,498	20,838
Total Suburban Hospitals	2,843	40,189	43,032	2,989	43,439	46,427	3,085	39,017	42,102
GRAND TOTAL ...	20,921	242,106	263,027	23,347	290,115	313,462	22,366	287,650	310,016

The following statement shows the race and sex of all the persons treated:—

RACE.				Males.	Females.	Children.	Total.
Europeans	6,415	1,414	1,351	9,180
Eurasians	11,044	7,741	15,343	34,128
Mahomedans	60,112	14,253	28,345	102,709
Hindoo	106,168	22,750	23,014	152,932
Other castes	3,465	2,919	4,793	11,167
Total	187,204	49,078	73,736	310,016

It appears from this statement that 60·38 per cent. of the total number treated were males, 15·83 per cent. females, and 23·78 per cent. children. The low proportion of females to males among Hindoo

and Mahomedan patients is explained by the relative smallness of the female population which the census returns brought to light, and of course to a large extent by the social customs of these races. It is, no doubt, less agreeable to the women of all classes and sects to seek relief at a public dispensary than it is to men.

There was some increase in the number of in-door patients treated for enteric fever, but the disease was of a comparatively mild type. Half the sufferers treated were Europeans, and 14 out of the 22 native patients were constables. No less than 11 of these 14 cases ended fatally. It does not, however, appear that this result was due to specially defective sanitary arrangements in the police hospital or the thanas. There were 136 cases of cholera in the shipping in 1876, against 110 in 1875. Of 108 cases during the past year of which the locality was specified, no less than 71 came from the moorings off Prinsep's Ghât and the Esplanade, and from Fort Point. A committee met during the past cold season to discuss the means by which the Fort drains can be connected with the municipal sewers. The scheme submitted has met with Mr. Eden's approval, and he has asked the Government of India to have this important work carried out as soon as possible.

In all 669 important surgical operations were performed, with only 74 deaths. The operations on the eye were specially successful, only one out of 223 ending fatally. Out of 40 deaths which followed operations at the Medical College Hospital only two can be attributed to hospitalism. This is a great improvement on previous years, when this affection was so prevalent as to suggest a radical defect in the construction of the hospital building.

The appended table shows the health of the town and suburbs during the past nine years, as exhibited in the hospital returns :—

YEARS.	ALL DISEASES.			CHOLERA.			Death-rate, excluding cholera.	Number of deaths registered by the municipality.	Rate per mille of population.
	Treated.	Died.	Died per mille.	Treated.	Died.	Died per mille.			
1868 ...	16,996	3,386	199	1,224	563	461	179	13,730	32
1869 ...	18,035	3,043	169	1,144	558	487	147	12,795	29.8
1870 ...	15,816	3,250	142	605	258	426	131	10,462	24.4

1876 ...	*21,532	3,226	147	740	399	539	134	12,904	30.2

* Excluding 534 patients in the Eye Infirmary.

The death-rate per thousand among those treated was 147 including cholera cases, and 134 excluding them. From this table it may be gathered that the public health was exceptionally good in the years 1870 and 1871 in respect both of the amount of sickness and of the virulence of disease, and especially of cholera; and that disease was more successfully treated in the hospitals during the past year than in either of its immediate predecessors.

The total amount disbursed on account of these institutions during the year was Rs. 5,07,473, against Rs. 4,88,835 in 1875. Of this increase the General Hospital was responsible for Rs. 33,223. A part of this sum was represented by Rs. 18,768 for medicines and books supplied by Government. There was no corresponding entry in the accounts for 1875. The charges of the Mayo Hospital for 1876 amounted to Rs. 59,175, exceeding those for 1875 by Rs. 8,414. In the report for 1874 the Surgeon-General estimated the permanent annual expenditure, exclusive of repairs, at Rs. 48,000. That this estimate was not unduly low was shown by the results of 1875, when, excluding expenditure on repairs, the gross disbursements were only Rs. 47,349. After deducting the charge on account of repairs, however, the expenditure for the past year was found to have been Rs. 6,861 over the estimate of 1874. The Campbell Hospital showed a decrease in the gross charges from Rs. 78,793 to Rs. 75,241. The number of persons treated—all in-door patients—was 6,640, against 7,782 in the previous year. Although the number of patients was so much smaller, there was actually an increase in the amount expended on bazar medicines and on wine and spirits, and a large increase in the wages of servants; while the decrease in the cost of dieting the sick does not at all correspond with the falling off in the number of patients. The Lieutenant-Governor has found it necessary to appoint a committee to report on the expenditure of this hospital. The Sumbhoo Nath Pundit Dispensary is the only institution which showed money invested during the year out of surplus income. The financial management of the Howrah Hospital was successful. Though there was an increase in the number of sick, the charges for dieting, for medical comforts, and for "miscellaneous charges," showed a decrease.

Of the 3,818 in-door patients treated in this hospital 1,795 were Christians and 2,023 were natives. The death-rate was 13·61 per cent.,—7·18 for Christians and 19·32 for natives. Exclusive of moribund cases, however, the mortality was only 10·35 per cent. of the total number treated. The death-rate among Christians was higher than in any of the preceding five years. The maximum death-rate of that period was 6·18 in 1872. The very satisfactory decrease in hospitalism has already been noticed. Deaths from this cause were only 5 per cent. of the number operated on in 1876, against 25·80 per cent. in 1875 and 31·06 per cent., the average of the six preceding years. The gradual falling off in the attendance at the out-door dispensaries of this hospital, which has been noticed for some years, is apparently attributable in some measure to the want of accommodation. There was a satisfactory increase in the number of minor surgical operations performed, as well as in the attendance at the ophthalmic dispensary.

The in-door patients admitted during the year numbered 3,805, including 409 natives. The death-rate of the Christians was 4·48, and that of the natives 13·96 per cent. Nearly one-third of the deaths among the former class resulted from cholera, 51 out of 101 cases treated ending fatally. It appears that 15 of these persons were moribund when they reached hospital. No less than 91 of these cases came from the shipping. Government has recently sanctioned the addition of an operating theatre to the surgical ward and a lying-in-room to the women's and children's wards.

The admissions to this hospital were 1,147 less in 1876 than in 1875. The death-rate, though still remarkably high, showed a decrease from 280 per mille in 1875 to 250. Exclusive of moribund cases, the mortality was 224 for each thousand treated. The statement of the prevalent diseases showed that more than three-fourths of the total mortality resulted from ailments chiefly occasioned by malarious poisoning and exposure aggravated by poverty. The monthly cost per patient rose from Rs. 16-13 in 1875 to Rs. 17-2-10 in 1876. The excessive expenditure in this hospital has already been adverted to, and has formed the subject of inquiry by a special committee.

These hospitals, with their affiliated dispensaries, continue to afford medical aid to the vast bulk of native patients. In all 189,690 persons received treatment at them during the year. The decrease of 4,075 on the returns for 1875 was entirely due to a falling off in the attendance of out-door patients at the dispensaries and at the Chandney Hospital. The returns of the out-door patients treated at the Mayo Hospital itself showed an increase of 2,079; but those of Park Street and Chitpore Dispensaries exhibited a falling off of 1,797 and 3,561 respectively. The mortality at these institutions was 127 per mille in 1876, against 117 in 1875.

The past year saw an increase among all classes of patients,—in-door as well as out-door, European as well as native. The utmost possible use was made of available accommodation, and at times the verandahs were used as wards. The mortality among the European and native patients was widely divergent, being only 34 per mille among the former and no less than 218 per mille among the latter. The death-rate was particularly high among native females,—275 among Mussulmans and 286 among Hindoos. There was a slight decrease in the number of cases of cholera treated; but the disease was of a specially virulent character among the native patients, producing a death-rate of 564 per mille, against 254 in the previous year. Phthisis contributed the high death-rate of 555 per mille. Remittent fever was also of a severe type.

The Superintendent of the Police Hospital noticed the state of debility to which many of the up-country constables reduce themselves by their parsimonious habits, and the attention of the Commissioner of Police was drawn to the matter. The death-rate in the Alipore Dispensary showed a satisfactory decrease, from 319 to 136 per mille.

Two hundred and seven charitable hospitals and dispensaries were open on the 1st of January 1876. During the year 23 new dispensaries were established,—two under class I, one under class III, grade 2, nineteen under class III, grade 3, and one under rule VII—, one was re-opened and one was abolished; so that 230 dispensaries remained open at the close of the year. Of these 151 were under the new rules, viz. 15 under class I, 12 under class II, 112 under class III, and 12 under rule VII; and 79 were under the old rules. Of the 34 temporary dispensaries which were open on 1st January 1876 in the districts

of Burdwan, Midnapore, and Beerbhoom, nine were made permanent. The remaining 25 were closed during the year.

The number of hospitals which received in-door patients was 146, or 11 in excess of the number shown in 1875, and they formed 65·17 per cent. of the (224) institutions from which returns were received, against 68·18 in 1875.

Attendance.

Patients Treated in Dispensaries.

YEARS.	In-patients treated.	Out-patients treated.	Total.	Mortality among in-patients per cent.
1871 ...	17,892	405,528	423,420	15·41
1872 ...	18,118	439,177	457,295	16·07
1873 ...	20,240	598,470	618,710	16·22
1874 ...	23,842	636,289	660,131	16·84
1875 ...	22,009	698,730	720,739	16·89
1876 ...	23,012	809,275	832,287	16·81

The table in the margin shows the recorded attendance of patients during the past year and in the preceding five years. The increase in the number of patients treated during 1876, particularly in the number of out-patients, was principally due to the inclusion of the statistics of a larger number of dispensaries in the returns for the year.

Of the total number of patients treated in 1876, 61·33 per cent.

Proportion of males, females, and children.

were adult males, 20·83 per cent. adult females, and 17·83 per cent. children under twelve years of age, against 64·16 per cent. of adult males, 18·69 per cent. of adult females, and 17·14 per cent. of children under 10 years of age in the preceding year. There was a slight decrease in the proportion of adult males and children amongst the in-door patients, while there was a slight increase in the proportion of adult females. Amongst the out-door patients the decrease in the proportion of adult males was more marked, and was probably due to a generally more healthy season and to the decline of the epidemic fever in the Burdwan Division. The proportion of female adults who attended as out-patients increased by 2 per cent., while there was a slight increase in the attendance of children.

The proportion of those cured and relieved was somewhat less than in 1875. The general death-rate in 1876,

Results of treatment.

16·81 per cent. of the number treated, was a little lower than in the previous year. In the Presidency and Dacca circles there was a slight increase in the mortality, and in the Dinapore circle a slight decrease. The death-rate was highest in the Presidency and lowest in the Dinapore circle.

Amongst the in-door patients injuries, fevers, and their sequelæ (such as general dropsy, anæmia, spleen diseases, and debility), bowel complaints, cholera, ulcers, syphilis, &c., were the principal causes of admission; amongst the out-door patients fevers and their sequelæ, goitre, rheumatism, ulcers, parasitic skin diseases, bowel complaints, &c., constituted the diseases from which a large portion were found to suffer.

The following diseases, in order of frequency, were the most fatal, viz. cholera, dysentery, tetanus, pneumonia, phthisis, diarrhœa, dropsy, small-pox, &c.; while dysentery, cholera, diarrhœa, fevers, dropsy, &c., in order of frequency, contri-

Principal causes of mortality.

buted the highest proportion of the total mortality. These results generally accord with the statistics of 1875; but cholera was of a more fatal type, and caused a considerably greater proportion of the total mortality in 1876 than in 1875. The same may be said of pneumonia.

During the past year 2,400 major and more important surgical operations, and 37,929 minor ones, were performed in the charitable hospitals and dispensaries in the interior, against 2,321 and 34,118 in 1875. Of the former number 14·2 per cent. were performed by Superintendents and 85·7 per cent. by the medical subordinates. Eighty-three per cent. of the patients were cured, 5 per cent. were relieved, 6 per cent. were discharged otherwise, 3 per cent. died, and 3 per cent. were remaining at the end of the year. No less than 233 important operations were performed on the eye and its appendages, inclusive of 181 operations (mostly extraction of the lens) for cataract. Sixty-nine per cent. of the total operations on the eye and its appendages were successful, while 62 per cent. of the patients operated on for cataract were cured—a more favourable result than that attained in 1875. Among the major operations there were four cases of amputation at the shoulder-joint, which all terminated fatally; 14 cases of amputation of the thigh, with a death-rate of 29 per cent.; 15 cases of amputation of the leg, with a mortality of 7 per cent.; 147 cases of lithotomy, with a death-rate of 12 per cent.; and 11 cases of herniotomy, with 27 per cent. of deaths.

The total income obtained in 1876 was Rs. 4,40,631-11-2, and the expenditure Rs. 4,38,885-7-5, leaving a surplus of Rs. 1,746-3-9, against Rs. 14,923-4-11 in the previous year. The average income of each dispensary was Rs. 1,967-1-8, against Rs. 2,216-15-6 and Rs. 2,051 in 1875 and 1874 respectively; and the average expenditure was Rs. 1,886-5-8, against Rs. 2,110 12-7 in 1875 and Rs. 1,985 in 1874.

The total income of all charitable dispensaries in the interior for 1876, exclusive of the floating balance and cost of medicines and forms which were supplied by Government, as well as the proportion of income derived from various sources, is shown, in comparison with the five preceding years, in the following statement:—

YEARS.	Total income.	PERCENTAGE OF THE TOTAL INCOME OF INCOME RECEIVED FROM—				
		Government.	Local funds.	Interest on invested capital.	European subscriptions.	Native subscriptions.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1871	3,08,773	45·71	(1) 16·15	5·44	13·70	20·94
1872	2,91,601	38·61	(2) 17·4	7·09	7·47	29·43
1873	3,10,886	34·31	(3) 19·69	6·23	7·93	31·84
1874	3,36,197	36·83	(4) 19·93	4·92	7·09	32·32
1875	3,74,902	32·60	(5) 27·82	4·64	6·74	28·19
1876	3,77,017	32·50	(6) 22·91	5·86	6·66	32·06

- 1) 4·07 from municipalities and town committees, and 12·08 from all other local sources.
 2) 3·97 ditto ditto and 13·43 ditto ditto.
 3) 5·17 ditto ditto and 14·58 ditto ditto.
 4) 6·77 ditto ditto and 13·16 ditto ditto.
 5) 7·22 ditto ditto and 20·58 ditto ditto.
 6) 8·97 ditto ditto and 13·98 ditto ditto.

The total income of the past year exceeded that of 1875 by Rs. 2,115, and the average income of the five years preceding 1876 by Rs. 52,546. The proportions of income contributed by Government and local funds during 1876 were slightly less than in 1875. There was a slight increase in the proportion of income derived from invested funds, and an increase of nearly 4 per cent. in the subscriptions from natives; while there was a very trifling decrease in the subscriptions from Europeans.

The cost of medicines, books, &c., supplied by Government to the charitable dispensaries in 1876 amounted to Rs. 63,615, against Rs. 64,058 in 1875 and Rs. 61,689 in 1874. If to this is added the value of medical stores supplied to the Calcutta medical institutions, Rs. 87,433; to dispensaries in the epidemic fever districts, Rs. 4,774; and Rs. 1,619 to dispensaries (both old and new) from which no returns were received, the sum total of Rs. 1,57,441 will be obtained, which represents the full amount expended by Government on these items in connection with the provincial medical charities for the financial year 1876-77.

Obstetric cases were received into 56 of the institutions, against 64 in 1875. The total number of women confined was 188, against 180, 159, 136, 104, and 94 in 1875 and the four years immediately preceding. Of the 188 cases, 43·6 per cent. were confined prematurely, 33·5 per cent. were cases of difficult labour, and 22·8 were natural. The hospitals and dispensaries to which the greatest number of these cases were admitted during the past year were Dacca, Moorshedabad, Hooghly, Jajpore, Ghattal, and Berhampore.

Sir Richard Temple was of opinion that the sale of Government medicines should not be confined to the sick and indigent poor only, and that every encouragement should be given to charitably disposed persons to buy quinine from the Government stores for free distribution to the poor. With this object it was ruled that planters or other employers of labourers should be allowed to purchase the drug from Government stores. It was also decided that quinine should be sold in small quantities, not exceeding one drachm, to persons requiring it for their own use and that of their families, provided they were too poor to procure them from the druggists. The further restriction placed on the sale of Government quinine was that it should not be sold to those who intend to sell it again, or to those who practise medicine for use by their patients, and that it should be a condition of sale in the case of those who buy an ounce or more that it will be used for free distribution to the poor only. It was also added that officers should use a discretion in selling more than one ounce to one person in one month with special reference to the quantity of the drug they may have for sale and the other demands likely to be made for it. A set of rules giving effect to the measures above noted was drawn up by the Surgeon-General and circulated, under orders of this Government, for the information and guidance of all Divisional Commissioners, District Magistrates, and Civil Surgeons in the mofussil. These rules came into operation from the 1st April 1876.

From the following table it will be seen that the total value of Government medicines sold in the mofussil during the year amounted to Rs. 6,539-6-2½ :—

	Half-year ending 30th September 1876.				Half-year ending 31st March 1877.			
	Rs. A. P.				Rs. A. P.			
Quinine ...	2,012	0	7		4,371	14	9½	
Darjeeling quinine				57	9	10	
Chiretta ...	1	14	0		0	3	0	
Jalap ...	2	15	3		0	4	0	
Castor-oil ...	54	5	0		30	7	9	
Cholera pills ...	7	3	0		0	10	0	
Total ...	2,078	5	10		4,461	1	4½	

The total value of the medicines sold during the half-year ending 31st March last amounted to Rs. 4,461-1-4½, or Rs. 2,382-11-6½ in excess of the sales effected during the previous half-year. The increase is chiefly attributable to the large sales of quinine. During the second half-year 61lb 4oz. 10dr. and 56gr. of the drug were sold, against 28lb 1oz. 2dr. and 45gr. in the previous half-year. There was thus an increase of Rs. 2,359-14-9½ on the amount realized during the preceding half-year. Increased sales of quinine took place in the 24-Pergunnahs, Burdwan, and especially in Rungpore.

The Darjeeling quinine was first offered to the public for sale during the second half-year, but the amount realized was only Rs. 57-9-10. There was a marked decrease in the sale of the other medicines, such as chiretta, jalap, castor-oil, and cholera pills, in the second half-year.

In April 1874 the Government of India forwarded copies of report on the treatment of leprosy with gurjun oil by Dr. Dougall, Senior Medical Officer of Port Blair, in view to his mode of treatment being tried in Leper Asylums. In August 1874 attention was again drawn to the subject, and the co-operation of local Governments was invited towards the extension of the use of gurjun oil as a cure for leprosy through the medical agencies at their disposal. The medicine was tried in the Leper Asylum, Calcutta, in the Medical College Hospital, the Sealdah Hospital, and in some of the hospitals in the mofussil. The reports of the results of treatment showed that no radical cure had been effected in any case. It was, however, thought that the patients might have been under treatment for too short a period to have derived any complete or permanent benefit, for though no radical cure had been effected it was evident that in many cases much relief was afforded by the use of the oil; and it was accordingly considered advisable to direct the continuance of the experiment of treating leprosy with this oil for another year. But further experiments showed similar results, and as the use of the oil was not attended with any permanent improvement the Lieutenant-Governor decided that it was unnecessary to pursue the inquiry further. The subject was not noticed in the last year's Administration Report, as the correspondence was not then complete.

Her Majesty's Secretary of State for India requested that a collection of native drugs might be made in each of the three presidencies for transmission to England for the Museum at Netley Hospital. The preparation of the collection for Bengal was entrusted to Assistant Surgeon Rai Kanai Lal Dey, Bahadoor. The Presidency General Hospital, Medical College, Calcutta, Campbell Medical School, Sealdah, Dacca Medical School, Temple School of Medicine, Patna, have also been supplied by Assistant Surgeon Rai Kanai Lal Dey with a complete collection of indigenous drugs, each collection comprising 251 specimens of drugs. The thanks of Government have been communicated to the Rai Bahadoor for the valuable services rendered by him in this matter. The cost of the entire six collections was only Rs. 950.

LUNATIC ASYLUMS.
 New Asylum at Hazareebagh.
 Principles of admission into Asylums.

The number of Lunatic Asylums in Bengal was increased during the year by the opening of the Hazareebagh Asylum on the 26th May. Up to this time complaints had been constantly made of the overcrowded condition of the other Asylums, and Sir Richard Temple took advantage of the removal of the prisoners from the district to the central jail to provide accommodation for about 250 lunatics. In according sanction to the establishment of the new Asylum, the Government of India asked that due attention might be paid to the principles which should govern the reception of lunatics for maintenance and treatment at the public cost. There was reason to believe that these principles had been more or less lost sight of, and that a large number of persons had been received into Asylums whose friends were perfectly well able to give them support and the requisite care, or whose condition was the temporary result of habits which rendered them unfitting objects for gratuitous medical treatment in public institutions. The attention of the district officers was prominently drawn to the subject, and instructions were issued which have had the effect of considerably reducing the number of admissions. The principle which has now taken the place of more or less indiscriminate admission is that persons suffering from the temporary results of sickness, intemperance, or debauchery, and those whom their friends ought to support, should be excluded from Asylums, and that, in addition to criminal lunatics, those only should be received who are absolutely dangerous, or who, having no friends or resources, may be in the acute stage, in which there is most hope of recovery from medical treatment. Inquiries were also instituted to ascertain to what extent lunatics had been received in Asylums who would on this principle have been excluded. Some lunatics were made over to their friends during the year; several have been similarly dealt with since the beginning of the current year, and inquiries are still in progress regarding others.

Results of the working of these principles.

The number in confinement on the last day of the past year was 1,131, against 1,147 on 1st January 1876 and 746 on 1st January 1870. As has already been observed, several releases have since taken place. The total number of admissions was 329, and of re-admissions 37, against 384 and 34 in the previous year.

The following table exhibits the capacity of each of the native Lunatic Asylums, allowing 50 superficial feet to each patient, and the number of lunatics confined in each on the last day of the year :—

	MALES.		FEMALES.		TOTAL.	
	Capacity.	Number on 31st Decem-ber.	Capacity.	Number on 31st Decem-ber.	Capacity.	Number on 31st Decem-ber.
Dullunda ...	246	164	47	65	293	229
Dacca ...	127	168	50	84	177	203
Patna ...	190	149	70	60	260	209
Cuttack ...	32	41	11	5	43	46
Moydapore ...	59	88	10	12	68	50
Berhampore ...	175	113	55	59	230	172
Hasareebagh ...	352	223	40	392	223
Grand Total ...	1,180	896	283	235	1,463	1,131

With the completion of the new ward under construction in Dacca, the capacity of that Asylum will be raised from 177 to 217. There was some overcrowding of females in Dullunda, Moydapore, and Berhampore, and of males in Dacca and Patna. It has been pointed out that this need not have occurred, and that it can easily be obviated in future. The Lieutenant-Governor has recently directed the closing of Moydapore, a small and unhealthy Asylum, which is quite close to Berhampore.

The number of criminal lunatics in Asylums was 232 at the beginning and 269 at the close of the year. The admissions and re-admissions numbered 85 and 6 respectively, while 31 were discharged and 23 died. Of the total number 29 have recovered their reason, but are detained under the orders of Government. Mr. Eden has at present under consideration the question of the place in which these persons should be confined.

Among the causes of insanity excess in ganja accounted for 30·66 per cent., and excess in spirituous liquors 4·16 per cent., of the cases treated during the year. Grief was assigned as the predisposing cause in 5·55 per cent. of the cases. Altogether 45·73 per cent. were attributed to the operation of physical, and 7·93 per cent. to that of moral causes, while in 46·33 per cent. the cause was unknown. The various types of insanity prevailed in the following proportions :—chronic mania 38·86, chronic dementia 24·25, acute mania 20·42, melancholia 9·05, acute dementia 4·36, idiocy ·79, and imbecility and amentia ·39 per cent. The recoveries were 21·03 per cent. of the cases in acute mania, 15·15 in acute dementia, 7·31 in chronic mania, 1·45 in melancholia, and 1·08 in chronic dementia. There were no recoveries from idiocy or amentia. The proportion of complete cures was 10·61 per cent. of average strength, 8·58 per cent. of cases treated, and 35·51 per cent. of admissions. The proportion of recoveries, partial and total, was 17·14 per cent. of average strength, 13·86 per cent. of the total treated, and 57·36 per cent. of admissions. These results were much less favourable than those of the previous year, which gave 28·23, 21·31, and 76·07

per cent. respectively, and were also considerably below the average of the preceding quinquennial period.

There were 1,152 admissions into hospital, or 94 per cent. of average daily strength, against a proportion of 102·4 per cent. in 1875. The average daily number of sick was 8·02 per cent. of mean strength, against 7·48 in the previous year. The admissions into hospital were exceptionally numerous in Dacca and Moydapore, where they numbered 250 and 230 per cent. of males and 103 and 235 per cent. of females respectively. In Dacca the daily average proportion of sick to mean strength was 17·49 per cent. of males and 12·54 per cent. of females; in Patna it was 9·42 and 7·46 respectively; and in Hazareebagh, where only males were confined, it was 10·83. In Dullunda and Berhampore the rates were, for males 53·6 and 55·48 admissions and 3·49 and 2·47 daily average sick per cent. of mean strength, and for females 49·6 and 3·3 and 65·9 and 1·9 respectively. The average mortality in the Asylums during the year was 9·7 per cent. of mean strength. This death-rate was lower than was attained in any one of the previous ten years, and was no less than 5 per cent. below the average mortality of that period. Cuttack headed the list with 18·11 per cent., chiefly caused by diarrhoea and dysentery; Dacca and Dullunda came next, with 13 and 11·3 respectively; at Hazareebagh and Moydapore, in which the number of sick was large, the mortality was, curiously enough, below the average. Berhampore and Patna were the only Asylums which preserved a fairly low rate both of sickness and of mortality.

Receipts and expenditure.

The following statement shows the receipts and expenditure of each Asylum.

ABSTRACT.	1	2	3	4	5	6	AVERAGE COST OF EACH PATIENT IN RELATION TO—

The daily average strength of the Hazareebagh Asylum is given as 204. This, however, is only the daily average for the seven months and six days during which the Asylum was open. The very trifling sum realized from the friends of patients did not fail to attract the attention of the Lieutenant-Governor, and inquiries have been set on foot which will, it is hoped, effect better results in this respect for the future. While the Dacca Asylum earned only Rs. 408 from manufactures, the actual profits in Patna were Rs. 2,577, and in Dullunda Rs. 9,708. No profits are shown against Cuttack, Moydapore, and Berhampore. The Superintendents, however, reported that the manufacture departments in those Asylums earned Rs. 179, Rs. 158, and Rs. 1,330 respectively during the year. The gross average cost of maintaining each patient varied most markedly. In Dullunda it was Rs. 142, in Dacca Rs. 110, in Cuttack Rs. 96, in Patna Rs. 87, in Hazareebagh at the rate of about Rs. 81, in Berhampore Rs. 80, and in Moydapore Rs. 78. The gross cost per head on account of "establishment" ranged from Rs. 70 in Dullunda and Rs. 58 in Cuttack to Rs. 39 in Berhampore and Rs. 38 in Patna. The annual average charge for "diet," which was Rs. 55 per head in Dullunda and Rs. 54 in Dacca, was only Rs. 32 in Berhampore, Rs. 31 in Cuttack, and Rs. 27 in Hazareebagh. The average charge for "contingencies" was Rs. 12-8-9 at Dullunda, or much more than double the charge at any other Asylum except Hazareebagh, where the circumstances were exceptional, the Asylum having initial charges to meet. The variation of expenditure and earnings was made the subject of a special reference to the Surgeon-General, who was requested to submit a full report on the subject.

The Bhowanipore Asylum is reserved for Europeans, Eurasians, and Armenians. The Asylum population on the first day of the year numbered 27, and 31 patients were admitted. Nine males were discharged cured, seven males and three females were "improved" and made over to their friends or the military authorities, and five men were despatched to Europe under the Shipping Act. There were four deaths, of which two resulted from organic cerebral disease. In this Asylum, as in Dullunda, the cost of maintenance is very high. Inclusive of the amount paid by the friends of lunatics, the cost of each patient averaged Rs. 1,123 per annum, or nearly Rs. 100 per mensem. After deduction of these payments, the average cost was Rs. 823. The chief item of expenditure was under the head of "establishment." The Lieutenant-Governor invited the attention of the Superintendent to the possibility of reductions in the scale of expenditure.

There was during the year a continued and steady increase in the number of women on the register. The year 1875 closed with 7,925; the number on the 31st December 1876 was 8,241. Altogether 435 names disappeared from the list in January 1876, and the closing number of the previous year was not recovered till May. In all 913 new names were registered in 1876, against 1,204 in 1875; and after allowing for casualties and absence on leave, the net increase to the number on the books was only 316. Out of the 913 new registrations, 142 were

Working of the Contagious Diseases' Act in Calcutta and its Suburbs.

effected spontaneously by the women and 771 after arrest. In 40 of the former cases and in 226 of the latter the women were found diseased. Only three women were prosecuted under section 4 of the Act, and of these only one was convicted; 3,708 women were arrested for default from periodical examination, and of these 183 were imprisoned, 555 were fined, 310 were warned, and 25 were discharged by the Magistrate. The activity of the police in this respect was not so great as in 1875, when 4,588 women were arrested. The results of the arrests, however, were much more satisfactory.

The ratio per cent. of newly registered women found diseased fell from 34.1 in 1875 to 29.1 in 1876. The gradual increase in the number of admissions of women to the lock-hospitals, which was reported in 1875, was still more apparent in the returns for the past year; and it was much in excess of the corresponding increase in the number of registered women. In 1875 there were 2,648 admissions, of which 410 were of women newly registered. In 1876 the total number was 3,322, including 266 of the new accessions to the rolls. The increase, however, was found principally among the minor affections, and there was a very marked decrease in the more virulent cases of infecting syphilis.

According to the practical test of the health of the male population, there was a general improvement. There was a large reduction in the total number of persons treated at the different hospitals for venereal complaints, and especially for primary syphilis. The comparative statistics of the years 1867 and 1876 afford substantial proof of the beneficial working of the Act. In 1867, 181,348 patients produced 13,083 cases of venereal; whereas in 1876 only 8,778 such cases were treated out of a total of 237,042. Admissions to hospital for primary syphilis fell from 5,943 in 1867 to 2,797 in 1876. In 1867 the ratio per cent. of venereal cases of all descriptions to the mean strength of the garrison was 33.56: in 1876, notwithstanding specially unfavourable circumstances, which need not operate for the future, it was only 12.6. The increase from 10.3 in 1875 to 12.6 in 1876 resulted from the formation of a temporary camp on the glacis of the Fort, and from the want of efficient inspection of the 2-12th Regiment during the first four months of its stay. Dr. Payne bore testimony to the ready assistance afforded him by General Ross in having the regiment examined. The statistics of venereal disease in the Fort William garrison are very favourable compared with those of some of the towns in England to which the Contagious Diseases' Acts have been extended. The latest returns for towns in which the Acts have been five years or more in force give 33 per cent. for Shorncliffe, 40 per cent. for Portsmouth, 49 per cent. for Chatham and Sheerness, 59 per cent. for Devonport and Plymouth, and 62 per cent. for Cork. The average ratio in the Fort William garrison for the past four years was only 9.9 per cent.

The total cost of maintaining the lock-hospital during the year amounted to Rs. 41,745-7-1, of which two-thirds, or Rs. 27,830-4-9, were paid by Government. The charges on account of the preventive police establishment amounted to Rs. 17,518-0-7.

The experience of the practical working of the Act in Calcutta justifies the conclusion that a very fair measure of success has been

attained. At the same time it cannot be denied that much yet remains to be done. The hospital returns show that there is still a great deal of venereal disease in course of propagation, and that many diseased women are still left free to spread contagion without the cognizance, or in defiance, of the police. There are many circumstances which render the successful administration of this special law much easier in Calcutta than in the European towns to which similar enactments have been applied. The comparative want of success which has attended the measure in Europe is owing to the undisputed fact that only open, and not clandestine, prostitution can be touched by any practicable repressive law. In Indian towns, however, and specially in Calcutta, the social customs, of the people and the general character of the population do not foster clandestine prostitution; and it may be broadly said that women of fallen character divide themselves into two great classes—those who live in concubinage with single men, and those who practise prostitution more or less openly in brothels. The number of women living as mistresses with men is no doubt large, but they do not really come within the scope of the Act in any way. No less than 8,500 women acknowledged themselves to be prostitutes to the census enumerators, while the names of 6,682 of these were borne on the register on 31st December last. In Paris it is estimated that there are 30,000 prostitutes out of a total population of about two millions; yet of these only 4,225 were on the register in 1865, and only 3,656 in 1870. In Calcutta there were 5,305 women on the registers in 1870 and 6,682 in 1876 out of a population of 429,535. In the 14 districts of the United Kingdom to which the Contagious Diseases' Acts have been extended there were 2,461 women on the registers at the close of 1869, and only 1,907 at the close of 1875. Nearly all the registered prostitutes of Calcutta reside in brothels, whereas in 1867 only 1,302 of the 3,861 registered women in Paris lived in *maisons tolérées*. The principal cause of the difference in success in the administration of these repressive laws in European towns and in Calcutta is probably to be found in the fact that Calcutta prostitutes are a clearly defined class, who practise their profession openly, and under certain well understood conditions. This fact is further illustrated by the comparative stability of the prostitute population in India. Their profession is unfortunately regarded by some as a hereditary occupation: prostitutes openly train their natural or adopted daughters to follow their trade, and those who have been born in, or who have once joined, the ranks of the abandoned class, rarely voluntarily forsake their occupation permanently. These circumstances render supervision comparatively easy. In European towns, however, the difficulties of the police are much enhanced by the transitory character of the prostitute population. Thus in the 14 districts of the United Kingdom 13,121 women were registered between 1869 and 1875, yet at the close of the last-mentioned year only 1,907 names appeared on the registers. Of the remainder only 271 are reported to have died, 562 got married, 1,395 entered homes, 4,067 "returned to their friends," and 7,304 were lost sight of. The fluctuations in the numbers registered in Calcutta bear a marked contrast to these figures. It appears that 12,112 women have been registered

in Calcutta since the 1st April 1869, when the Act came into force: of these 426 have died, 575 only have been exempted, and 4,429 have been lost sight of. All this points to the possibility of very successful working of the Act in Calcutta.

The results taken for the whole year do not, it is true, show any improvement in the state of health of the troops; but this is mainly owing to the very high percentage of disease which prevailed in the first quarter.

Lock-hospital at Dina-
pore.

During the first quarter the troops were moved about a good deal, having to attend at Calcutta and at Bankipore on account of the Prince of Wales's visit, and were necessarily liable to contract disease to a greater extent than in cantonments. Accordingly it appears that in the first quarter the amount of disease reached the very high figure of 308 per thousand on the strength of the troops, but after that the number steadily and regularly diminished. The figures were 212·72 in the second quarter, 196·72 in the third quarter, 189·56 in the fourth quarter. The average for the whole year was 226·75 per thousand, against 217 for the previous year; but the circumstances above stated explain that this result was due to causes beyond the control of the local authorities. The rapid and steady diminution of disease in the three last quarters of the year is satisfactory. This improvement is doubtless due to increased supervision by the local authorities, and to the special measures adopted during the year, the most important of which were the strengthening of the establishment, increased police supervision, the more complete segregation of the women, and, finally, their more frequent examination.

There can be no doubt that advantage was derived from this increased strictness. The number of men suffering from disease in each quarter was always in inverse proportion to the number of prostitutes sent to the hospital. As the frequency of examination increased, the number of prostitutes sent to hospital increased, and the number of men suffering from disease diminished.

There was a steady diminution in the number of women on the register. There were 69 on the average in 1874.

At Barrackpore.

The next year the average was reduced to 60·7, and in the year under review it was reduced to 56. It seems a very difficult thing to keep the numbers even at this figure; and it seems that though the register bears this number of women, yet it is no index to the real population of prostitutes, as the women newly brought on the register for the most part abscond, and the residuum that does not fluctuate cannot be much more than half the registered number. With an average number of 56 women only on the register, there were 44 removals, mostly from women leaving the jurisdiction, and 33 new registrations. There were 57 admissions into hospital among the registered women: in other words, each woman remaining permanently on the register, and regularly attending the examinations, came at least once during the year into hospital, and probably a great deal oftener.

There was an increase in the proportion per thousand of soldiers admitted into hospital from 61 in 1875 to 101 in 1876. Even this number is, however, obtained only by arbitrarily excluding 28 cases, which are said to have been contracted elsewhere. The real figures

show 445 : 73 :: 1,000 : 164, or 164 per thousand. It is quite certain, however, that much of this disease was contracted, not at Barrackpore, but while the troops were encamped in Calcutta during the visit of His Royal Highness the Prince of Wales. The returns from other cantonments show that this duty has been a fruitful source of disease among the troops; and in the case of those stationed at Barrackpore, no less than 53 per cent. of the admissions during the whole year are debited to the first quarter, when the troops were on duty in Calcutta.

The rules appear to have been more carefully enforced at Dum-

At Dum-Dum.

Dum than at Barrackpore, and to be worked more easily than at the latter cantonment. With an average number of 34 prostitutes on the register, there were only 12 reported for absenting themselves from the examination, and in four instances they were prosecuted and fined. These figures contrast favourably with the number of absentees at Barrackpore, viz. 143, of whom apparently none were punished or fined. The fluctuations, too, in the *personnel* of the women on the register are much less marked. With an average number on the books of 34 women, there were only four removals and seven fresh registrations. The explanation probably is that at Dum-Dum fewer women are brought nominally on the register merely to leave the jurisdiction the next day rather than undergo examination, and those who do appear on the register are stationary. It is in accordance with this view that the hospital returns show 56 entries during the year among the small number of 34 registered women.

The state of health among the soldiers in respect to venereal disease was not good, and the number of admissions into hospital was great.

There was an average strength of 100 men in garrison, out of whom there were only 10 admissions altogether into hospital. Of these 6 were for disease con-

At Hazareebagh.

tracted at Dinapore, and the other 4 were for gonorrhœa. There was not a single admission for primary syphilis throughout the year. Obviously the large proportion which the registered women (28) bear to the strength of the troops has much to do with this immunity. It is noticeable that out of the number of these registered women there were only 4 cases of absence from examination, though it appears that the examinations at Hazareebagh are held weekly. There were, moreover, only 6 cases of primary syphilis among the registered women during the year.

The arrangements for removing the lock-hospital to the cantonment on Jullapahar, as decided by the Government of India, have not yet been carried out.

At Darjeeling.

There were 15 cases of venereal disease among the troops, against 18 in the previous year. The average number of registered women was nine during the year, five having been removed from the register since the beginning of 1876. The admissions into the hospital during the year were 14, against 26 in the previous year.

Vaccination.

THE progress of vaccination was more extensive and satisfactory than in 1875-76. The total number of vaccinations performed during 1876-77, including re-vaccinations, was 1,509,034, against 1,086,373 in 1875-76. The number of persons vaccinated by the staff of Government vaccinators in the several circles of superintendence, and by vaccinators working under the supervision of the civil surgeons of the several districts during the past four years, is shown in the following comparative table :—

	1876-77.	1875-76.	1874-75.	1873-74.
Calcutta and Suburbs	37,473	40,173	41,300	38,796
Metropolitan circle	521,050	471,856	402,385	306,676
Darjeeling circle	330,218	136,905	120,669	97,757
Ranchee circle	50,442	13,818	27,343	37,411
Sonthal Pergunna circle	42,822	30,306	22,967	15,039
Eastern Bengal circle	140,534	90,840	110,050	78,401
Orissa circle	24,868	1,293
Behar circle	11,423	4,328
Dispensary vaccination	340,305	290,854	234,159	217,464
Total	1,509,034	1,086,373	959,673	791,634

In all the circles excepting Calcutta there was an increase in the amount of work performed. It was greatest in the Darjeeling circle, in which the number of operations performed was 193,313 greater than in the previous year. The number of vaccinations performed in this and the Metropolitan circles exceeded the estimated birth-rate of the respective circles. In the Ranchee and Eastern Bengal circles, which showed a falling off during 1875-76, the outturn of the past year exceeded that of any of the four previous years. There was also an increase in dispensary vaccinations. The greater portion of the decrease in the Calcutta circle was the result of a falling off in emigration and consequent decrease in the emigrant population of the town and its suburbs, and the prevalence of an epidemic of measles during the months of February and March, the season which the better classes of natives prefer for vaccination.

The total number of successful operations performed during the past year was 1,458,286. This gives a percentage of 96·6 on the total number of vaccinations, against 93·01 in the preceding year and 92·37 in 1874-75. In primary vaccinations the ratio of successful cases was

98·18 per cent., against 97·2 per cent. in 1875-76 and 96·53 per cent. in 1874-75. It was highest in the Calcutta circle, where it reached 99·9 per cent.

Of the 1,509,034 persons vaccinated during the past year the sex, caste, and age of more than 1,147,700 were registered. Of these 52·5 per cent. were males and 47·5 females; 50·4 per cent. were Hindoos, 45·5 per cent. Mussulmans, 18 per cent. Christians, 3·8 per cent. "other castes;" 7·2 per cent. under one year of age, and 92·8 per cent. above that age. The proportion of females and Christians was the same, and of infant and "other castes" nearly the same, as in 1875-76. There was, however, a rather marked decrease in the proportion of the Hindoos, and a corresponding increase in that of the Mussulmans.

The total cost of vaccination during the past year was Rs. 1,18,731, against Rs. 1,05,800 in the previous year. The increase was caused by the maintenance throughout the year of the newly-established Orissa and Behar circles, which were in existence for only three months in 1875-76, and by the extension of self-supporting vaccination with paid superintendence. The amount paid by Government was Rs. 1,07,657; the remainder was defrayed from municipal and other local funds. The proportion of cost borne by Government remained as high as in previous years, viz. 90 per cent. of the whole. The average cost of each successful case was one anna three pies, against one anna ten pies in the preceding year. There was a diminution in the average cost in every circle, excepting Calcutta and Behar, which showed an increase. The increase in Calcutta was attributed to falling off of work; that in the Behar circle was not satisfactorily accounted for.

Some additions were made during the past year to the staff of vaccinators attached to the circles. The number of ex-inoculators or independent vaccinators was also increased by 490. The establishment attached to the Sonthal Pergunnahs circle was re-organized. In the Darjeeling circle three Native Superintendents and some vaccinators from the Metropolitan circles were employed for the purpose of teaching the old establishment the use of the lancet. The unusual success in this circle was attributed by Dr. Lidderdale to the introduction of vaccination by lancets instead of by needles, and to the healthy competition which sprung up between the old and new men.

In several of the circles the people are now more favourably disposed towards vaccination than formerly, and in the Metropolitan circle they frequently ask and pay for the services of vaccinators. The objection of the people to virus being taken from the arms of children is still a general complaint. In the Orissa and Ranchee circles the Superintendents had to encounter great difficulties owing to the ignorance and prejudice of the people. Dr. Roy, Superintendent of the latter circle, succeeded in introducing vaccination, under very adverse circumstances, into the Palamow sub-division, where a previous attempt made by his predecessor had failed.

In most of the districts in which vaccination on the self-supporting system was carried on during the past year the results were unsatisfactory. In Bankoora the number of vaccinations fell off owing to the absence of Dr. Conolly, to whose great personal exertions and unflagging interest in the work the success of previous years was mainly due. In Midnapore, though a larger number of operations was performed than in the previous year, there was little European supervision. In Bhagulpore and Monghyr also the supervision was nominal. Altogether more than 257,500 vaccinations were performed by ex-inoculators and other independent practitioners, at a cost of Rs. 3,895 to Government, or about three pies per case.

VII.—INSTRUCTION.

Education.

THE department of Education, in common with other departments of the Administration, suffered under the retrenchments which the state of the provincial balances at the beginning of the year 1876-77 compelled the Government to enforce. The grant originally intended to be assigned was Rs. 25,38,333; but this sum was successively reduced, first to Rs. 24,92,236, and eventually to Rs. 24,67,236. The actual expenditure of the year was Rs. 24,61,599, of which Rs. 4,71,814 represented departmental receipts, and the balance, Rs. 19,89,785, was the net Government expenditure. The gross expenditure in 1874-75 was Rs. 25,11,830, and in 1875-76 it amounted to Rs. 26,32,444. The expenditure of 1876-77 from the Education budget was therefore about half a lakh below that of 1874-75, and nearly 1½ lakhs below that of the year 1875-76.

The officers of the department exerted themselves loyally and strenuously to carry out the orders of Government and to prevent the diminution of the grant from injuriously affecting the progress of education. But it was inevitable that so serious a reduction in the available funds should not only arrest development, but should in some cases result in an actual decrease in the number of schools and pupils; and this decrease has occurred in middle schools generally, and in primary schools in the great majority of districts. There was also a considerable decrease in the number of schools for special instruction; but this did not arise from the reduction of the grant, but from the closing of several normal schools of the second and third grades—a measure which was carried out by Government upon grounds independent of financial considerations.

Under these circumstances it is a satisfactory proof of the general soundness and vitality of the educational system of Government that, notwithstanding these disadvantages and drawbacks, the number of schools and colleges under

* Number of schools.

inspection, and the pupils attending them, showed a marked increase during the year. The figures are given in the following table :—

Class of Instruction.	1876.		1877.	
	Schools.	Pupils.	Schools.	Pupils.
For general instruction—
Government institutions	...	259 24,208	267 24,595	
Grant-in-aid ditto	...	1,872 87,379	1,842 88,193	
Primary and Circle Fund Institutions	...	13,270 353,166	13,665 351,648	
Unaided institutions	...	2,358 66,111	5,629 120,517	
For special instruction*	...	19 4,940	75 4,398	
Total	...	17,850 535,804	21,478 589,351	

* Schools for special instruction are all Government institutions, except 15 aided normal schools with 852 pupils and one unaided technical school with 255 pupils.

An examination of this table shows that the increase in the number of Government schools has not been accompanied by a corresponding increase in the number of pupils; that though grant-in-aid schools have diminished by 30, the number of pupils in them has increased; that schools supported from the primary fund show an increase in numbers, with no increase in pupils; that a large additional number of unaided pathsalas have been brought under inspection; and that, notwithstanding the decrease in the number of schools for special instruction, the pupils attending them have not very greatly diminished. If the unaided institutions, which are of course unaffected by the finances of the department, are excluded from the returns of both years, it will be seen that while in 1875-76 there were 15,492 schools with 469,493 pupils, in 1876-77 the number of schools rose to 15,849, but that of pupils diminished to 468,834.

If the schools are classified, not according to the budget grant from which they are supported, but according to the character of the instruction imparted in them, the results of the year are as follow :—

CLASS OF INSTRUCTION.		1876.		1877.		Average number of pupils at each school.
		Schools.	Pupils.	Schools.	Pupils.	
Superior	Colleges	18	1,404	20	1,792	90
	Higher English schools	173	32,529	180	32,957	183
	Middle	623	34,072	511	30,072	59
Secondary	vernacular schools	1,259	59,304	1,045	51,718	50
	Intermediate English schools	112	4,328	39
	vernacular schools	1,501	52,650	35
Primary	Primary* schools	13,316	348,510	12,272	302,550	25
	Female	427	11,331	480	12,027	25
Special	...	91	4,940	75	4,398	58
Total		15,807	468,090	16,196	462,402

* In the report for the previous year all schools aided from the primary fund were classed as primary schools. The figures have been corrected in this table.

Unaided primary schools are not shown in this table, the standard of instruction in these not being accurately defined. Intermediate

schools appear as a new class in the returns of 1876-77; in the previous year intermediate English schools did not exist, and intermediate vernacular schools were included in the primary class. The falling off in middle schools, and especially in middle English schools, is very noticeable, the number of middle English schools in 1875-76 being the same as that of middle English and intermediate English together in 1876-77. In the middle vernacular schools the loss is not so great, as the majority of the intermediate vernacular schools have not come down from the middle class, but have risen from the primary class. But it is estimated that of the 214 middle vernacular schools which have disappeared from the returns of the year about 40 or 50 have been entirely closed, and the rest have fallen to a lower class. Primary schools show a decrease of nearly 1,000. This means that in round numbers 1,300 of these schools have been raised to the intermediate class, and 1,200 have disappeared from Bengal generally; while no less than 1,500 new schools have been added to the list in the two districts of Midnapore and Balasore.

In all this there is no ground for apprehension, and but little cause for regret. Some of the weaker schools, which possessed little vitality independent of the Government grant, have been closed; while a more careful classification has shown that some schools were unable to maintain the standard under which they were previously ranked. But the colleges and the higher English schools at one end of the scale, and the primary schools at the other, have in general stood the test of financial reductions in a manner which shows the soundness of the basis upon which they are established. The lesson to be deduced from the experience of the year appears to be that the middle schools are the weakest part of our educational system, and that special efforts should be made to strengthen and improve them.

The favourable inference which may be drawn from these returns is confirmed by an examination of the figures which show the proportion of the total educational expenditure contributed by Government and by the people themselves. Including the charges of the Medical College and schools, which are not shown in the education budget, the total expenditure on organized education was Rs. 42,34,000, of which Rs. 22,52,000 were paid by Government. In the previous year the Government contribution was Rs. 24,03,000, and the total expenditure Rs. 41,89,000. An increase of nearly half a lakh of rupees in the total expenditure, combined with a decrease of more than a lakh and a half in the payments by Government, shows that during the year the private funds expended upon education increased by about two lakhs of rupees. The Government share of educational expenditure has decreased during the year from 57 to 53 per cent., and this decrease in the rate is found in the schools of every class. The contributions from the public were Rs. 16,68,000 in 1874-75, Rs. 17,86,000 in 1875-76, and Rs. 19,82,000 in 1876-77. These figures afford a convincing proof that the people are willing not merely to accept the instruction imparted in our schools, but to take their share in supporting it; and it is especially satisfactory to find that in a year in which the Government was compelled to enforce measures of the strictest economy the schools suffered no

Contributions received
from the public.

pecuniary loss, the deficiency being supplied, and more than supplied, by increased contributions from the public.

The primary schools supported or aided by Government showed a decrease during the year of nearly 1,000 schools and 46,000 pupils. But this decrease is owing, as has already been explained, to the elevation of about 1,300 of the best primary schools to the intermediate class. There has therefore been a real increase of about 300 schools; and as it appears that 1,500 pathsalas have been newly brought on the returns in the two districts of Balasore and Midnapore, it follows that about 1,200 schools have disappeared in other districts. Some of these continue to exist as unaided schools, but it is to be feared that the greater number have been closed. The unaided schools brought under inspection have increased from 2,043 schools with 43,714 pupils to 5,282 schools with 96,859 pupils. In the whole number of schools aided from the primary fund there are above 338,000 pupils, of whom it is estimated that about two-thirds, or 225,000, are in the lowest stage of instruction; 110,000 are able to read, write, and understand easy sentences out of a book, while at least 3,000 have reached a higher stage than this.

In the indigenous schools existing all over the country, upon which the system introduced in 1872 by Sir George Campbell was founded, instruction of an almost fixed and constant type had for generations been imparted. It was not a liberal, but a special and technical education: indeed it was not education at all in the proper sense of the word, but rather instruction in some of the most necessary arts of life. The pupil learnt writing and arithmetic. He learnt writing, not that he might enlarge his mind or delight his leisure by reading, for books were unknown to him: he learnt that he might be able to address his landlord or his father-in-law in the set style that had been confirmed by the usage of centuries. Arithmetic is always, and necessarily, a practical art. But the arithmetic of the pathsalas was so eminently and intensely practical that it neglected everything that had not immediate reference to the daily concerns of a Bengali villager's life. The pupil learnt thoroughly how to secure himself against dishonest reckonings,—against the artifices of the money-lender, the shop-keeper, and the landlord's steward. But no method that he acquired would have taught him directly how to divide a sum of money amongst a number of persons, or how to multiply except by continued addition. Arithmetic, as he learnt it, was not a science that he could apply to the solution of fresh problems: it was a practical art that secured him against loss in his ordinary money transactions. The value of such a training is beyond dispute; but the training was still of the nature of technical instruction. The ryot's son went to school to learn how to measure his fields and calculate his rent; the money-lender's son went to study tables of interest. The blacksmith's or weaver's son cared little for these things, and learnt his trade, where he could best acquire it, in his father's shop. All alike valued technical instruction, and that only. And in consequence of their technical character the pathsalas formed a class apart, altogether separate from, and unconnected with, the general liberal education of the country, as it went on in the schools founded or supported by the Education Department. There was a

gulf between them which no efforts on its part could bridge. That Department ignored or neglected the indigenous pathsalas, just as it ignored the technical instruction of the smithy or the loom, because it had no means at its command for connecting either with its own special work of education; and it took no steps to establish or foster such schools, because experience had shown that the people would always maintain in sufficient numbers the institutions that possessed such practical utility for them.

Sir George Campbell discovered the means of bridging the gulf. While fully recognizing the technical character of pathsala instruction and insisting on its value, he nevertheless saw that the pathsalas worked on lines so near to those of an elementary liberal education that the two could be linked together here and there in such a way as to preserve the characteristic excellences of each. The pathsala might, by careful treatment, be transformed into the lowest of a series of schools, while still retaining that character which alone gave it value in the eyes of the people. In this way only could a system of popular education be created out of materials that had little or no connection with popular education. The pathsalas became an educational agency, not by what they preserved, but by what they now for the first time introduced. But the utmost caution was needed in bringing about a revolution so vital; and hence throughout the Resolution of the 30th September 1872 far greater stress was laid on the retention of the old subjects than on the introduction of new. The danger that Sir George Campbell apprehended was the conversion of a good pathsala into a bad lower school, and the consequent secession of all the pupils. The Resolution therefore rightly insisted on the maintenance, not only of a low, but of the old standard. At the same time the cautious references to book-reading, and above all the establishment of scholarships to enable picked boys to overstep the narrow bounds of the pathsala and to enter on the wide field of learning, pointed clearly to the real character of the change that was contemplated.

The language of the Resolution was thus in some measure doubtful, and exposed to different interpretations by those to whom was entrusted the task of working out the reform. One district officer resented the slightest attempt to improve the teaching of the pathsalas; another was not satisfied until he saw a primer in the hands of every pupil. One maintained that to describe a new class of schools (as Sir Richard Temple did) as "intermediate" between pathsalas and middle schools was to compare two things that had no common character; another blamed his inspecting officers because so few pathsalas were found to have reached the intermediate standard. This diversity of opinion and of treatment has not been without its advantages. It has enabled us to compare the working of opposite principles, applied in various degrees and amid every variety of surrounding conditions, and to determine how far the one or the other is suited to the circumstances of the population of Bengal. Referring to the figures given in a previous paragraph, it appears that out of 338,000 pupils in the newly aided primary schools 110,000 are said to be able to read and write and 3,000 to have reached a higher stage. These figures are supported by the fact that over 11,000 candidates presented themselves at the last

primary scholarship examinations held throughout Bengal and more than 5,000 passed. The standard of passing is (1) reading a book of the difficulty of *Bodhoday* (a manual of useful knowledge); (2) the four compound rules of arithmetic; (3) the old subjects of the pathsala course in their fullest extent, namely manuscript reading and writing, mental arithmetic, bazar and zemindari accounts, and mensuration; and 200 out of 500 marks must be gained in order to pass. These figures supply a rough indication of the number of pupils throughout Bengal who have attained or are attaining knowledge of a kind from which, had they remained in the old pathsalas, they would have been absolutely excluded.

But the question remains, who then are those who come within reach of our influence? Of what classes are the pupils of the pathsalas, aided and unaided, composed? In a typical village the upper and middle classes consist of the Brahmans, Kayasths, and wealthy bankers. Even before the establishment of the Government system all these went to school as a matter of course. Below them come the cultivating classes; the artisan classes,—blacksmiths, barbers, weavers, and the like; and the shop-keepers. These were not altogether beyond the range of instruction: they were in some degree affected by it. A well-to-do ryot or rising tradesman would send his son to school even though he had not been there himself. But, considering their numbers, education among this class was rare, especially among agriculturists. Lower still come the Bagdis, Domes, and Haris, who fill the ranks of agricultural labourers or fishermen. These never dreamed of going to school. The Mahomedans of Bengal generally occupy positions corresponding to those of the last two classes: the great majority cultivate the soil or live on the rivers. Besides those of the better sort who attended maktabas for the purpose of reading the Koran, here and there a Mussulman boy would go to a pathsala and learn Bengali writing and accounts. This was common with traders, and with the large class of domestic servants.

In considering how far the new system of education has affected these classes of persons, the first and third classes need not be regarded: the first, because they go naturally to school and show no repugnance to improved teaching; and the third, because they are, and will long remain, outside the border, being found, in any numbers worth speaking of, neither in aided nor in unaided pathsalas. And in the second class attention may be confined to the cultivating classes and the Mahomedan community, the great majority of whom belong to what is departmentally described as “the lower classes of society,” or “the masses.” Year by year Mahomedan boys have flocked into the pathsalas in constantly increasing numbers. The relative increase of Mahomedan pupils has kept pace, and more than kept pace, with that of Hindoos. Though they are mostly found in the less advanced pathsalas, and consequently the reductions of the past year seriously diminished their numbers, yet it is clear that they have come to regard the ordinary Bengali pathsala under a Hindoo guru as an institution in which they too have a share. It is the same with the cultivating classes. Their numbers are returned for the last three years as 200,000, 212,000, and 241,000 pupils respectively in all schools, or a nearly constant average

of 41 per cent. of the total number of pupils. The cultivators amount by the census to about 45 per cent. of the population.

At the same time it must be admitted that the pathsalas in many districts are undergoing a change which, if unchecked, tends more and more to thrust the lower classes out of them. Up to 1875 those entrusted with the management of the schools had been warned against unduly raising the standard of pathsala instruction. Nevertheless the new schools continued to rise; and so determined was this tendency that in April 1875 Sir Richard Temple accepted it as the direction which they should be encouraged to take, laying it down as the policy of Government that the primary standard should be from time to time raised, and that one-third of the grant for primary education should be set apart for schools teaching this standard. These orders were determined by the actual condition of the pathsalas at the time. Their effect was not so much to prescribe a new rule as to sanction an existing practice. But in September of the same year a further step was taken. The still higher standard of the intermediate examination was fixed for such of the primary schools as might elect to teach it, and no limit was set to the number of schools that might make that election. The two Minutes read together left it open to the District Magistrates to push an indefinite number of their pathsalas up to these higher standards, the only provision for the maintenance of the old subjects of instruction being found in the April Minute, which directed that "the present lowest standard should still be maintained for a large number of schools." In some districts the permission given in these orders has been pushed to extreme limits, although it is clear that any rapid or general rise in the standard of instruction tends to exclude the poorer classes. So long as the merits of a pathsala are judged by the easy test of its success in the primary scholarship or higher examinations, rather than by the hard test of the progress made by the mass of the pupils, this danger will be a real one. The success of a district in primary education is to be judged, not only or chiefly by the number of its distinguished pupils, but much more by the number of those who gain a fair knowledge of the three rudiments of education. Still, notwithstanding the example set by some districts, throughout Bengal generally little harm has been done. The proportion of cultivators and of persons in the lower classes remains much the same as in former years, notwithstanding the reduction in the humblest classes of schools.

The standard fixed for the primary scholarship examination is the following:—

						Marks.
I.—Handwriting						50
Manuscript reading						50
Reading and explanation of "Bodhoday"						100
II.—Arithmetic, the four rules, simple and compound						75
Subhankari						75
III.—Bazar accounts						50
Zemindari						50
Simple mensuration						50
Total						500

Candidates gaining one-fourth of the marks in each group and two-fifths of the aggregate marks are arranged in lists for each district,

and the scholarships are awarded to the highest candidates in these lists; but the district committees are allowed to give a preference to boys from backward parts of the district. Out of 11,462 candidates sent for examination from 3,110 schools 5,246 passed and 386 gained scholarships. The scholarships now given are quite numerous enough to search out and foster unusual talent among the poorer classes in Bengal, and they are not unfrequently won by children in a very humble station of life. It is noticeable that this year girls competed for this scholarship for the first time, and that in Jessore one girl obtained a scholarship, while in Tipperah three girls passed and one obtained a scholarship, standing first on the whole list.

The field of secondary instruction was enlarged during the year under report by the inclusion of a new class of intermediate schools, standing midway between the primary and the middle vernacular schools. The separation was effected, and the definition completed, by the establishment of corresponding scholarships, the standard of which was the following :—

Lower Vernacular Scholarships.

					Marks.
1. Bengalee language	100
2. History and Geography of Bengal	100
3. Arithmetic	150
4. Geometry, 1st Book of Euclid	50
5. Natural Philosophy and Physical Science	100
Total				...	<u>500</u>

For a corresponding class of schools, in which elementary English was taught, a similar scholarship standard was fixed, in which geometry was replaced by English. Hence the class of secondary schools included the three divisions of intermediate, middle, and higher, of which the first two were again subdivided into English and vernacular, the last being restricted to English. By recent orders, however, the nomenclature of all schools of primary and secondary instruction, and of the scholarships corresponding to them, has again undergone revision. The following classification has been adopted :—

Class of instruction.	Class of schools.	Corresponding scholarship.
Primary.	Primary.	Primary.
	Lower vernacular.	Lower vernacular.
Secondary ...	Middle English.	Middle English.
	Higher "	Junior.

Thus intermediate English schools have disappeared as a class, and individual schools will be treated, according to the standard attained by them, as lower vernacular, or middle vernacular, or middle English.

The figures for intermediate vernacular schools are as follow :—

			Schools.	Pupils.
Government schools	9	245
Aided "	1,424	49,987
Private "	68	2,438
Total			<u>1,501</u>	<u>52,650</u>

The establishment of these schools was opportunely brought about. Not only was there an ill-defined class of schools, which had no fixed aims, and gravitated from time to time, now upwards to the middle scholarship standard, now downwards to that of the primary scholarship; but it was also necessary to provide for the known requirements of the pathsalas. A circle school took some time to grow to the middle standard, and in its upward growth it needed some such support as that given by the new scholarship. The scheme of Sir George Campbell closely searched the educational conditions of the country, and in many parts discovered or elicited capabilities which, without the stimulus then given them, might long have remained undeveloped. In such places the new pathsala manifested from the outset vigorous life, and soon outgrew the limits of the early standards. To these also the new scholarship has given the support and encouragement which they needed.

It appears that of 1,501 schools returned as intermediate on the 31st March 1877, 723 sent up candidates for scholarships in the previous September. The larger number represents those schools which declared for the intermediate course and the lower vernacular scholarship on the 1st January. Of the 1,645 candidates 867 passed and 185 gained scholarships.

The figures of intermediate English schools give the following results :—

						Schools.	Pupils.
Government schools	2	49
Aided	"	65	2,598
Private	"	45	1,681
Total						112	4,328

Of these schools 76 sent up 201 candidates to the examination, of whom 146 passed and 39 gained scholarships. The great majority of these schools are degraded middle schools, very few springing from the ranks of the pathsalas, for the encouragement of which they were established. Many of the scholarships also were won by middle schools. On a review of all the circumstances it appeared to the Government that the maintenance of these scholarships was unnecessary: they have accordingly been abolished.

The figures relating to middle vernacular schools are as follow :—

		1875-76.		1876-77.	
		Schools.	Pupils.	Schools.	Pupils.
Government schools	...	173	9,833	174	9,848
Aided	"	1,000	45,616	803	38,566
Private	"	86	3,955	69	3,302
		1,259	59,304	1,045	51,718

The aided schools are subdivided into 556 grant-in-aid schools, against 637 of the previous year; 107 circle schools, against 141 of the previous year; and 139 pathsalas, against 222 of the previous year. There has therefore been a loss of 81 grant-in-aid schools, 34 circle schools, and 83 pathsalas. The pathsalas are merely reduced

to a grade better suited to their stage of advancement. The loss of circle schools is due partly to re-classification, partly to the withdrawal of circle pundits. Of the grant-in-aid schools 50 have been degraded and 30 abolished. Of the unaided schools 10 have been degraded; the remainder are closed. The chief losses have occurred in the Presidency, Burdwan, Rajshahye, and Dacca Divisions, in which vernacular schools are most numerous. But in spite of all drawbacks it cannot be doubted that the condition of middle vernacular education in the more advanced portions of Bengal is generally sound. It is true that the vernacular scholarships are still the chief attraction that these schools possess in the eyes of the people; but the vernacular scholarships are few compared with the number of students that pass the examination, and still fewer compared with those that compete. It is known that the chance of winning a scholarship is but small, and that the certificate has now no value in the eyes of the High Court, yet the schools continue to be well attended. The average number of pupils has risen from 47 to nearly 50, though this result has doubtless been helped by the disappearance of the weaker and less numerously attended schools. Few only of those who fail to win scholarships go on to a higher class English school, and a large number of pupils are turned out year by year educated in the vernacular only. In less advanced portions of the province, in Behar for example, little zeal is shown for vernacular education.

Out of 1,045 middle vernacular schools shown in the returns 824 competed for the vernacular scholarship in the previous October; the remaining 221 schools have merely declared for the middle standard. The numerical results of the examination contrasted very unfavourably with those of the preceding year. In the examinations of 1875, 4,062 candidates presented themselves and 2,521 passed; in those of 1876, 3,003 candidates appeared and 1,359 passed. The decrease in the number of candidates is sufficiently accounted for by the schools that have dropped to the intermediate class or otherwise disappeared; but the far more serious decrease in the number and in the proportion of passed candidates requires a different explanation. That explanation is found in the improvement that was made in the scholarship standard by the orders of 1875. The first examination by the new standard took place in 1876, and the test was consequently more severe than that of the previous year.

Middle English schools.

The figures of middle English schools are as follow:—

		1876.		1877.	
		Schools.	Pupils.	Schools.	Pupils.
Government schools	...	6	872	5	731
Aided	"	513	27,844	438	25,101
Private	"	104	5,356	68	4,240
Total	...	<u>623</u>	<u>34,072</u>	<u>511</u>	<u>30,072</u>

As before explained, the schools apparently lost have mostly fallen to the class below; about 30 have ceased to exist.

Schools of this class are very popular. The average number of pupils to a school is 59, the yearly Government grant Rs. 335, the

yearly local income Rs. 636. In a middle vernacular school the corresponding figures are 50 pupils, Rs. 157 Government grant, Rs. 280 local income. (These figures refer to grant-in-aid schools only.) Yet it may be doubted whether the educational value of an average middle English school is equal to its popularity. The motives which lead to the conversion of a vernacular into an English school by the establishment of an English class are various. There is, firstly, the desire of one or two leading men in the village to give their children, destined finally for the zillah school, timely instruction in the rudiments of English. Secondly, the attractions of the minor scholarship, now apparently placed within the reach of every pupil. Thirdly, the certainty that, even if their reading is carried no further, a knowledge of English up to, or not far short of, the minor scholarship standard will qualify the pupils for inferior service of some sort. The English class is therefore added; the foremost pupils are taken out of the hands of the pundit, skilled in all the arts of teaching, and placed under the care of some inexperienced youth. The study of vernacular literature and vernacular grammar is altogether abandoned. The vigorous and elegant compositions of the best Bengali authors are replaced by trivial stories. History and science are read chiefly as exercises in English, with but little attention to their subject-matter.

These considerations are chiefly important in regard to the orders passed in 1876, permitting vernacular schools to teach English. The result of this concession was that a certain number of aided schools, good when judged by the vernacular standard, immediately converted themselves into inferior English schools by the substitution of an incompetent English teacher for the head pundit. This was clearly not the result which the orders of Government were intended to bring about; and it became necessary to supplement those orders by fresh limitations, so as to prevent the study of English being introduced in such a way as to injure the vernacular teaching of the school. This has been accomplished by the provision that the middle English scholarship standard shall henceforward include the course in vernacular literature, hitherto confined to the standard for vernacular scholarships. Every aided vernacular school will now be at liberty to add, with the sanction of the inspecting officers, and at its own cost, an English class; and when it has advanced so far as to send candidates to the middle English scholarship examination, it may be recognized as an English school and classed accordingly. In such cases it will often be found possible to amalgamate a vernacular and an English school that now exist side by side with a double grant. Most middle English schools will doubtless conform at once to the new conditions, by the appointment of a pundit to teach vernacular literature, so as to qualify the pupils for the new middle scholarship standard. But some few, especially in advanced parts and in the neighbourhood of higher English schools, will be content to set aside the scholarship course altogether, and to conform exactly to the standard of the third class of a zillah school, for which their pupils will be generally intended. In such schools the Entrance examination supplies a sufficient motive, and no incentive in the form of scholarships is required.

Of 623 schools returned as middle English on the 31st March 1876, only 261 sent pupils to the corresponding examination in the following October. It follows that besides the 112 schools that have either disappeared from the returns or have definitely classed themselves as intermediate schools there are 250 nominally middle English schools, which nevertheless do not profess to have reached the standard of the minor scholarship. This proportion is much worse than that for vernacular schools, and seems to support the disparaging estimate that has been formed of the character of many middle English schools.

Higher schools.

The following figures relate to the class of higher English schools:—

				1876.		1877.	
				Schools.	Pupils.	Schools.	Pupils.
Government schools	45	11,952	48	12,235
Aided	"	85	9,550	88	10,365
Private	"	43	11,027	44	10,357
Total	173	32,529	180	32,957

It appears, therefore, that there has been but a small increase in the number of pupils. In the 45 old Government schools the increase amounts to only 62 pupils. In 14 schools the attendance has actually diminished; the chief causes assigned being the prevalence of sickness, and, in Backergunge and Noakholly, the destructive effects of the cyclone.

The series of net grants made in 1872 for a period of five years to zillah and collegiate schools came up for revision at the commencement of 1877. In the year 1870-71 the cost to Government of the five collegiate schools of Hooghly, Dacca, Patna, Kishnaghur, and Berhampore amounted to Rs. 46,900. By the orders of 1872 a yearly sum of Rs. 30,750 was thenceforward assigned to these five schools; and though it was found impossible to effect immediately so great a reduction, yet the efforts of the department have been constantly directed towards that end; with so much success that in 1875-76 the expenditure exceeded the sanctioned limit by only Rs. 521. The Director recommended that the net grants to these schools should be continued for a further term, and they were sanctioned by Government in each case for three years longer. In regard to the zillah schools it was shown that while the local income had expanded within five years to the extent of Rs. 22,700, the Government expenditure within the same period had decreased by more than Rs. 15,000, the number of pupils having moreover increased from 5,445 to 7,402. It was pointed out that while the net grants of a few schools might with advantage be increased, large reductions could safely be made in those of other schools. These recommendations were sanctioned, the grants being renewed for a term of three years, with a total reduction of Rs. 8,100 a year.

For all zillah schools a new principle of classification has been accepted. Schools are no longer to be classified, as in 1872, according to the amount of the net grants assigned to them, but according to their size and importance. The number of pupils is taken as the basis

of classification, and three classes of schools have been accordingly formed; a standard scale of establishment being fixed for each class, to which it is designed that every school shall more or less nearly conform.

The net grant scheme instituted by Sir George Campbell in 1872 has been justified by the results of the experiment. The district committees, to whom was entrusted the general control of the funds, have felt that the prosperity of a school largely depended on the wisdom of their management and on the practical interest which they might take in its welfare. Sir Richard Temple's order that deserving teachers should share in the pecuniary success of their school gives every teacher a constant motive to co-operate with the district committee in making the school successful and popular, and has thus confirmed the tendency to improvement. It is in great part to the combination of these causes that we may ascribe the steady rise in numbers, popularity, and success of many Government schools of this class.

Of 185 higher English schools which sent up 1,849 candidates to the University Entrance examination 158 passed 1,005 candidates, of whom 149 gained scholarships. The following table compares the success of Government, aided, and private schools at this examination. That of Government schools, as might be anticipated, is the most conspicuous:—

Entrance Examination, December 1876.

DECEMBER 1876.	Number of schools.	Number of candidates.	NUMBER PASSED IN—				Percentage of success.
			First division.	Second division.	Third division.	Total.	
Government schools ...	46	738	100	271	112	483	65.4
Private schools (aided) ...	79	362	29	87	61	177	48.8
Ditto (unaided) ...	60	707	52	205	77	334	47.2
Schoolmasters	10	1	1	2	20
Private students	32	2	3	4	9	28.1
Total ...	185	1,849	183	567	255	1,005	54.3

Between the Hindu School in Calcutta, which passed 42 candidates out of 43, 21 of them in the first division, and the zillah school at Balasore, none of whose eight candidates passed, there is of course every degree of excellence and efficiency. The following list places in order of merit the several classes of the Government schools:—

CLASS OF SCHOOLS.	Number of schools.	Number of candidates.	First division.	Second division.	Third division.	Total passed.
Collegiate and higher schools	14	395	74	144	52	270
Zillah schools, 1st class ...	7	125	12	58	23	93
" 2nd " ...	13	149	12	57	23	92
" 3rd " ...	12	66	2	13	13	28

The following table classifies the candidates according to their religion :—

Entrance Examination.

	Number of candidates.	NUMBER PASSED IN—			Total.
		First division.	Second division.	Third division.	
Hindoo	1,635	158	502	238	898
Mahomedans	98	5	17	12	34
Christians	83	14	32	3	49
Brahmists	27	5	14	1	20
Theists	4	1	1	1	3
Others	4	1	...	1
Total	1,849	183	567	255	1,005

The chief point worth notice is the small proportion of Mahomedan candidates that succeeded in passing the examination.

In the University system the Entrance certificate qualifies the holder for admission either to an Arts or to an Engineering College, and also for admission to the pleadership classes of any recognized school of law. He cannot, however, present himself for the pleadership examination until, having attended a two years' course of law lectures, he has passed the First Arts examination. After passing that examination a student may be admitted to the Medical College, or to the B.A. classes of an Arts college, or to the B.L. classes of a law school; though here again he cannot take the degree of B.L. unless he has attended law lectures for two years (out of the full three years' course) after taking the B.A. degree. The great majority of candidates choose the course in Arts, with or without concurrent attendance at law lectures.

While the number of candidates who passed the Entrance examination in December 1876 was unusually high, the proportion of those who continued their studies in the colleges was below the average. Of the 1,005 successful candidates 663 took their admission in January into Government and aided Arts colleges, and an unknown number, probably not less than 130, joined the unaided colleges; while 39 were admitted to the Civil Engineering College in June. Hence not less than 150 students either brought their studies to a close after passing of the Entrance examination or became teachers in schools with the view presenting themselves at some future time for the First Arts examination.

The Government colleges are the following. Those of the first grade, teaching to the B.A. standard, are six, namely the Presidency, Hooghly, Dacca, Patna, Kishnaghur, and Cuttack colleges; the last two have opened fourth-year classes from the beginning of the session of 1877. Those of the second grade, teaching to the F.A. standard, are six, namely the Sanskrit, Berhampore, Midnapore, Bauleah, Chittagong, and Rungpore colleges; the last two having similarly opened first-year classes in the same session. The last four have hitherto been called high schools; the designation is to be replaced for the future by that of second grade

college. The aided colleges are six, as in the previous year ; and there are three unaided colleges, of which La Martinière College furnishes no returns. The following tables give the returns of attendance and expenditure :—

From the first of the above tables it appears that there was a total increase of 388, or, 28 per cent., in the number of students at all colleges, of which increase the aided and unaided colleges received the largest share. Amongst the Calcutta colleges the Presidency College, with 309 pupils, alone is stationary; its numbers having steadily declined since 1872, when there were nearly 450 students on the rolls. The lower rate of fee in the aided and unaided colleges of Calcutta is sufficient to explain these facts. The Presidency College still attracts the more wealthy among the students and the majority of the scholarship-holders, while those who cannot afford to pay the high fee of Rs. 12 a month join the cheaper colleges of Calcutta. The Government colleges out of Calcutta have increased the numbers on their rolls by 154, or 30 per cent. Of the aided colleges, in which the increase is at the rate of 35 per cent., the General Assembly's and St. Xavier's colleges have made the most rapid progress.

Comparing the table of expenditure with that for the previous year, it appears that while the expenditure from State funds upon Government colleges has remained almost unaltered, the private contributions have increased to the extent of Rs. 4,000—an amount which represents partly the fees of the additional students admitted during the first three months of the session of 1877, but chiefly the local contributions at Cuttack to meet the Government expenditure on the college. In aided colleges the Government expenditure has increased

by Rs. 1,400 owing to the increased grant to the Doveton College, and the private expenditure by Rs. 3,300. The total annual cost of the education of each student is Rs. 407 in a Government college and Rs. 308 in an aided college.

The following table gives the particulars of the First Examination in Arts:—

First Arts Examination, December 1876.

Grand Total	622	24	101	149	274

Of all the candidates examined by the University 45·5 per cent. passed; in Bengal 44·5 per cent. The Presidency College passed 56 per cent. of its candidates, one-sixth of them in the first division. The other colleges of Calcutta passed 45 per cent. of their candidates, one-thirteenth of them in the first division. The aided colleges, however, took a very high position.

The following table shows the religion of the candidates. It calls for no comment, except that no Mahomedan candidate passed in the first division :—

				NUMBER PASSED IN—			
				Candidates.	First division.	Second division.	Third division.
							Total.

Teachers	23	2	4	2
Grand Total	242	39	54	22

The general results of this examination were much better than those of the previous year. In all Government colleges 57 per cent. of the candidates passed, against 25 per cent. in 1876; in all aided colleges 50 per cent. passed, against 20 per cent. in 1876.

The table showing the religions of the candidates follows :—

				NUMBER PASSED IN—			
				Number of candidates.	First division.	Second division.	Third division.
							Total.
Hindoos	198	30	45	19
Mahomedans	10	3	1	0
Christians	9	2	1	1
Others	25	4	7	2
Total	242	39	54	22

While in the two preceding years no Mahomedan candidates, out of 14 who presented themselves passed the examination, in the present year it appears that four succeeded, three of them passing in the first division.

The number of candidates for honours from Bengal was 23, as in the previous year. Of these 15 passed. Eleven took up English, and six passed,—five from the Presidency College and one teacher. One candidate from the Sanskrit College passed in Sanskrit. Five candidates appeared from the Presidency College in mathematics, and four passed. In physical science there were two from the Presidency College, of whom one passed; two from the Hooghly College, both of whom passed; and one from Dacca College, who failed. Ten of the 15 successful candidates were students of the Presidency College. The subjects most frequently selected for honours are therefore English, mathematics, and physical science. The fact that there was only one candidate in philosophy and none in history shows the direction which the reading of the best students is taking and likely to take. For the ordinary degree of M.A. 17 candidates appeared and eight passed.

The department of special instruction comprises the subjects of law and medicine, surveying schools, industrial schools, and the School of Art. The general statistics are shown in the following table:—

Statement of Attendance and Expenditure in Schools for Special Instruction for 1876-77.

From the return of attendance for two years it appears that the professions of law, medicine, and engineering have become less attractive to students. Each of these professions, in fact, is overstocked. In 1873 the number of students in law classes was 421, and the attendance in these classes has fallen steadily ever since. Graduates of the University, men who have taken the degree of B.L. and been duly enrolled as pleaders, find after months or years of waiting that there is no work for them to do, and no prospect of any, the native bar, both in the metropolis and in the mofussil, being overcrowded. The number of qualified lawyers who abandon their profession and seek for service in the educational and other departments of Government is yearly increasing. The proposed increase in the number of moonsifs' appointments would afford immediate relief to this class; but the natural effects would follow: the law classes would again be crowded, and in a short time the block would recur. In the medical profession the circumstances are much the same. The students now admitted into the Medical College are a more highly educated class of

men than their predecessors, the qualifying standard for admission having been raised. But the first batch of students who entered the Medical College with the F.A. certificate are still under training, and meanwhile the number of licentiates who pass the University examination every year is much in excess of public requirements. There is a large and increasing number of candidates for Government service, whom it is not possible to employ; while at the same time the private demand, though increasing, is not increasing at a rate sufficient to absorb the supply. Still, though the medical profession is now overstocked, the surplus will sooner or later find employment. If the present rate of admission into the Medical College be maintained, the number of licentiates will not be sufficient to satisfy the demand. On the whole the medical profession, notwithstanding temporary difficulties, appears to offer fairer prospects than the legal.

The students passing out of the Calcutta Engineering College are in nearly the same position. The number of those qualified for employment is far above the demand. But it may be hoped that this difficulty also is a transient one. The Public Works Department has hitherto been practically the sole employer of qualified engineers; but the district establishments in Bengal have now opened up another field, and the surplus is being to some extent absorbed therein.

The vernacular medical and surveying schools in different parts of Bengal are prospering, and no fears need be entertained about their final success. These, however, attract a different class of the community, belonging to a somewhat lower social stratum. Their success in no way lightens the difficulties of the middle classes in their search after a professional career: it rather increases those difficulties. The pupils of the vernacular schools of medicine will, no doubt, in course of time spread widely the knowledge of, and the desire for, English medical treatment, and thus prepare the way for the more extensive employment of University graduates. But meanwhile they will occupy many of the positions which the medical graduate has hitherto claimed as his own, in dispensaries, tea gardens, and the like. In the same way the surveyors trained in the vernacular schools will thrust out of the field the less successful pupils of the Civil Engineering College, who have hitherto been able to monopolise inferior posts in which a knowledge of surveying is required.

The Government colleges to which a law department is attached are five—namely the Presidency, Hooghly, Dacca, Patna, and Kishnaghur colleges. Compared with the previous year, there has been a loss of 9 students, the Presidency losing 20, Patna 5, and the others gaining a few each. Receipts from fees, &c., have decreased, while Government expenditure has more than doubled. Mahomedan pupils increased from 5 to 10.

At the B.L. examination there were 76 candidates, of whom 56 passed, against 54 out of 83 in the preceding year.

There are five schools of medicine in Bengal,—the Medical College in Calcutta, the Campbell Medical School at Sealdah, the Temple Medical School at Bankipore, the Dacca Medical School, and the Cuttack Medical School.

Medicine.

The following statement shows the attendance and expenditure of these schools for two successive years :—

Attendance and Expenditure of Schools of Medicine for 1876 and 1877.

NAMES OF INSTITUTIONS.	ATTENDANCE ON—		EXPENDED IN 1875-76.		EXPENDED IN 1876-77.	
	31st March 1876.	31st March 1877.	By Govern-ment.	Total.	By Govern-ment.	Total.
Medical College, English De- partment	225	176	Rs. 1,20,577	Rs. 1,41,402	Rs. 1,44,358	Rs. 1,59,520
Campbell Medical Vernacu- lar School, Sealdah	583	391	} 51,252	80,371	78,471	1,02,326
Temple Medical Vernacular School, Bankipore	165	193				
Dacca Medical Vernacular School	244	247				
Cuttack Medical Vernacular School	38	31				
Total	1,255	1,038	1,71,829	2,21,863	2,22,829	2,61,846

The decrease of students in the Medical College during the last two years from 330 to 225, and now to 176, is attributed by the Principal mainly to the regulation of the University which substituted the F.A. for the Entrance examination as a qualification for admission to the Licentiate class, and in a secondary degree to the fact that a stricter attendance at lectures is now insisted upon. The large decrease in the number of students in the Campbell Medical School seems mainly attributable to the enforcement of a stricter entrance test, whereby the admissions fell from 182 in the preceding year to 86 in the year under report. Moreover, a larger number passed out of the school during last year—namely 105, against 68 in the preceding year; and, further, a larger number had their names struck off for non-payment of fees—namely 165, against 122.

The number of students on the rolls of the Civil Engineering Department of the Presidency College on the 31st of March of the last four years is given in the accompanying table :—

			1874.	1875.	1876.	1877.
3rd year class	28	12	19	31
2nd "	41	46	51	46
1st "	188	99	84	48
Total	<u>227</u>	<u>157</u>	<u>154</u>	<u>125</u>

It will be seen that the department contains 29 students less than it did in the preceding year.

The first-year class, soon after the opening of the session in June last, contained 74 students, of whom 56 were new admissions and 18 were unpromoted students of the previous session. But the attendance has fallen off gradually during the year, some students discovering that they had small taste for engineering studies, and some retiring on account of ill health. There is also a conviction that the prospects of employment in the Department of Public Works are not as good as they used to be.

The object of the four survey schools is to give a course of instruction in practical surveying in the vernacular to a class of students not elsewhere provided for. The state of these four schools on the 31st of March is shown in the following table:—

Survey Schools for 1876-77.

Schools.	Pupils on roll.	Christians.	Hindoos.	Mahomed-ans.
Patna	45	...	23	22
Hooghly	41	...	40	1
Cuttack	28	1	27	...
Dacca	45	...	40	5
Total	159	1	130	28

The Patna Survey School was opened in March 1876. At first there was only one teacher, but when the number of students exceeded 50 an assistant teacher was appointed. On the 31st of March 1877, 26 of the students were learning through the medium of the vernacular and 19 through that of English. All but four (Bengalis) were Beharis, 23 being Hindoos and 22 Mahomedans. Of the total number of 72 boys who have been admitted since the opening of the school, 17 were holders of vernacular scholarships and 9 of minor scholarships; 19 had read in the upper classes of higher English schools, and 27 had to pass a preliminary examination. In the Hooghly Survey School on the 31st of March 1876 there were 44 students on the roll, 43 being Hindoos and one a Mahomedan. On the 31st of March 1877 the number was 41, 40 being Hindoos and one a Mahomedan. The state of the Cuttack Survey School is improving. There were 28 pupils in this school on the 31st of March; of these 27 were Hindoos, all Ooriyas except one, and one was a Christian. The large proportion of Ooriyas is a hopeful sign.

There are four industrial schools—the European and the native workshops at Dehree, the Dacca and the Ranchi schools. There is also a class for carpentry attached to the model school at Chyebassa, but no special report is given of this, and Government is at no cost for its maintenance.

In the two Dehree schools there were 27 Europeans and 51 natives on 31st of March, and the cost to Government in the year was Rs. 16,641. The Dacca school is attached to the normal school. On the 31st of March it had 18 pupils on its rolls, of whom 16 held stipends and 2 were free students. This decrease from 31 on the rolls in the preceding year is only in appearance, for 15 of the pupils in that year were so irregular in attendance that their names were struck off in the year under report. Of the 18 students 2 were Brahmans, one was a Boidya, and 5 were Kayasths; the rest belonged to the lower castes. The Ranchi school began in a small technical class attached to the Mission of the Society for the Propagation of the Gospel, in which Kol boys were taught carpentry and other useful arts. To extend the usefulness of this small class a monthly grant of Rs. 100 for maintenance, and a special grant of Rs. 3,000 for appliances, were sanctioned by Government in December 1875. Carrying out this scheme, a good workshed for the carpenters and the smiths, a little building for a school-room (in which, in accordance with the orders of Government, boys not

already up to the primary standard are taught by a teacher on Rs. 10), and a wall surrounding these and a fair-sized compound, were erected. Further, a very complete lathe, with all necessary tools, was procured from England. On the 31st of March the school contained on its roll the names of 20 pupils, of whom 18 were Kols and two were Hindoos.

The subscriptions realized for the Bankipore Industrial School fell very far short of the sum originally expected, so that the funds actually in the hands of the committee at the close of the year amounted to only Rs. 42,000, yielding an income of Rs. 140 a month. An application was made to Government for the grant of an equal sum, and an establishment was proposed costing Rs. 240 a month, leaving Rs. 40 for unforeseen expenditure. An income of Rs. 280 appeared, however, to the Government to be quite insufficient to set up the school with any reasonable prospect of success; and a stronger establishment, costing Rs. 351 a month, towards which Government consented to give Rs. 250 a month as an experimental measure for two years, was proposed for the consideration of the committee. It was suggested that a European foreman from Dehree should be appointed as superintendent, and that blacksmiths and carpenters accustomed to work under European superintendence should be engaged from the Jamalpore workshops. All Government scholarships (below the junior scholarships) were to be tenable in the school.

The Calcutta Music School was established in August 1871, and began with 19 pupils, divided into two classes, one for vocal and one for instrumental music, with two teachers. On the 31st of March 1877 there were 51 pupils in the school, of whom 38 paid a fee of one rupee per month and 13 were free. These 51 pupils were divided into six classes, two for the *sitar*, two for vocal music, one for the violin, and one for the *mridanga*. Vocal music is taught by two masters—one a Hindustani and one a Bengali, and instrumental music is taught by five masters. The income from fees during the year was Rs. 421, while Dr. Surendro Mohun Tagore contributed Rs. 993, the expenditure amounting to Rs. 1,414. Dr. Surendro Mohun Tagore also supported a branch school at Colootolah.

Dr. Tagore's learning in all branches of national music has been recognized in many of the courts of Europe, but his chief ambition is to introduce the study of that music into the schools of his country.

The following figures show the progress in female education during the past year. They refer to the instruction of native girls only, schools for Europeans being separately entered:—

Female education.

		1876.		1877.	
		Schools.	Pupils.	Schools.	Pupils.
Government schools	...	1	68	1	87
Aided	...	223	6,833	280	7,824
Zenana*	(aided)	110	1,534	125	1,580
Private	...	69	1,255	48	1,001
	Total	403	9,690	464	10,493
Girls in boys' schools	7,186	9,794
	Total girls	16,876	20,286

* Each zenana teacher is reckoned as a school.

This large increase of 3,400 girls at school is almost exclusively due to the application of the primary grant to the spread of female education; more girls' pathshalas have been opened, and more girls induced to read in the boys' pathshalas.

The number of girls in different stages of progress is shown in the following statement, again for natives only:—

				1876.	1877.
Higher stage	27	30
Middle „	1,008	1,143
Primary (upper)	4,963	5,861
Ditto (lower)	10,878	13,252
Total				16,876	20,286

It follows, therefore, that during the course of the year 135 girls have passed from the primary into the middle stage, and that nearly 1,000 girls who last year were unable to read and write have now acquired these useful accomplishments. The progress thus indicated is satisfactory. Besides these there were 17 schools for European girls with 1,339 pupils.

The total Government expenditure in Calcutta on female education amounts to about Rs. 4,220 a month, of which Rs. 2,670 are spent on the education of native females. Half of this cost is incurred in aiding the missionary zenana agencies of Calcutta. Of the 1,500 zenana pupils in Calcutta 1,268 have been examined by the Inspectress. Of this number 854 were in the lower section of the primary stage,—that is, unable to read and write easy sentences,—387 in the higher section of that stage, and only 27 in the middle stage. When it is remembered that the Bethune and other schools have sent forth for many years past a number of partially instructed girls into the zenanas of Calcutta, many of whom, it may be presumed, are now continuing their education under missionary agency, the results shown above cannot be deemed satisfactory. A system of education whose highest attainable standard (except in a few solitary cases) is the reading of easy sentences, and under which the great majority of the pupils fall short even of that standard, is of no great value. To meet the Government expenditure of nearly Rs. 15,000 upon zenanas the subscriptions for last year amounted to Rs. 30,000, and about Rs. 4,400 were paid as fees by 1,500 pupils. The social position of the pupils may be thus indicated. The largest number belong to the families of writers and employés; brokers and traders come next; then professional men, pleaders, doctors, or surveyors; and a few persons of independent means.

The three female normal schools in Calcutta have 48 pupils in all, costing yearly Rs. 4,400 to Government and Rs. 12,800 altogether. Many of the trained pupils who have passed out from these schools have taken service under the zenana agencies; very few indeed have been employed in the aided girls' schools. Of the orphanages, one was established for the maintenance of children who lost their parents in

the Orissa famine, while the Free Church Orphanage receives children from all parts of Bengal. In both institutions the orphans are brought up in the Christian faith.

Throughout the country the aided girls' schools have increased by 57, with about 1,000 additional pupils. The whole of this increase is due to the opening of girls' pathshalas, paid for from the primary grant. The schools aided under the grant-in-aid rules have fallen from 163 with 5,831 pupils to 157 with 5,702 pupils, 60 of these being under missionary or Christian management. Of those under native management 35 are in the Presidency Division, 21 in that of Burdwan, 14 in Dacca, and 15 in Rajshahye. Pathshalas for girls aided from the primary grant have increased from 53 with 905 pupils in 1876 to 128 with 2,217 pupils in 1877. The increase is almost exclusively confined to the district of Tipperah, in which 61 girls' pathshalas have been set up, with an increase in the number of pupils from 73 to over 1,000. The district was described in a former report as the most backward of the Dacca Division in female education, and the Magistrate appears to have been anxious to remove the reproach. Each school costs Government Rs. 3-3 a month.

It has been urged by many that the mass education of females may be best promoted, not by setting up special schools for girls, but by inducing them to attend the ordinary boys' schools, in which the teaching and the discipline are better, and in which there is often a very healthy rivalry between the two sexes. In this point of view it is satisfactory to find that the number of girls attending boys' pathshalas has increased from 5,213 to 6,705—an increase of 1,500 girls.

In the total population of Bengal, Behar, and Orissa the Mahomedan education. edans number, according to the last census, 31·5 per cent. The returns of the year show that out of a total number of 468,834 pupils of all creeds in Government and aided schools on the 31st of March 1877 the Mahomedan pupils numbered 81,585, or 17·2 per cent. The total number on the 31st of March 1876 in Government and aided schools was 91,223, or 19·4 per cent. of the whole number of pupils in that year. The percentage in the year ending 31st of March 1875 was 20. Though the number of Mahomedan pupils and its ratio to the total of pupils in Government and aided schools have thus considerably decreased, the number at all schools, private as well as aided, has only very slightly decreased,—from 107,284 to 106,590. On the other hand the percentage of pupils in all schools gives a still more unfavourable result for the year under report. While Mahomedan pupils were over 20 per cent. of the total number returned as attending Government, aided, and unaided schools in the year 1875-76, they were only 18 per cent. in the year under report. The decrease in the actual numbers of these pupils is explained by the decrease in the number of primary schools in those divisions in which there is a large Mahomedan population, it being borne in mind that over 80 per cent. of the Mahomedan pupils are in schools of the lowest class; and the decrease in the ratio of Mahomedan to Hindoo pupils is explained by the fact that the chief increase of the year has taken place in the

Burdwan and Orissa Divisions, where the Mahomedan population is very small indeed.

The figures showing the proportion of Mahomedan pupils in different classes of schools are as follows. In Government colleges for general education the proportion is 7 per cent.; in aided colleges, 1 per cent. In all higher English schools it is 16 per cent.; in middle English schools, 11 per cent. The smaller attendance in the latter class of schools is largely due to the fact that Bengali is taught to all pupils, while in most higher class schools they have the option of taking up Urdu. In middle vernacular schools the proportion is 14 per cent., and 19 per cent. in the pathshalas. Government schools of all classes uniformly attract Mahomedans to a greater degree than aided schools. In schools of technical instruction the circumstances vary widely. Out of 222 law students there are only 10 Mahomedans; of 124 students in the Civil Engineering College, there are only 2; of 176 students in the Calcutta Medical College, only 4; and 3 only out of 119 students of the School of Art. In the matter of vernacular medical education there is a striking contrast between Bengal and Behar. In the three medical schools at Sealdah, Dacca, and Cuttack there are only 10 Mahomedan students out of 669. In the Temple School at Bankipore, of 193 students 141 are Mahomedans. The Mahomedans of Behar are both higher in the social scale and more enlightened by comparison with Hindoos than those of Bengal. In the vernacular survey schools 28 pupils out of 159, or 18 per cent., are Mahomedans. In all schools the number of Mahomedan teachers was 3,126, or nearly 13 per cent. of the total number.

On the whole, the application of the Mohsin Fund to the maintenance of madrassas, in conformity with the Resolution of 29th July 1873, continues to advance Mahomedan education. Five madrassas are supported from the Fund,—at Calcutta, Hooghly, Rampore Bauleah, Dacca, and Chittagong. All these worked successfully during the year, especially the Calcutta madrassa, which has shown a steady increase in numbers for several years past. Part of the Fund is also expended in the award of Mohsin scholarships to deserving Mahomedan students, and in the payment at ordinary colleges and schools of a portion of the fees of Mahomedan pupils of the poorer classes. It is worthy of notice that three students and one ex-student of the Calcutta madrassa left for England during the year, with the object of graduating at an English university and subsequently reading for the bar. Final orders of Government were issued in May 1877, approving the proposal to conduct the annual examinations of the senior classes of the Government madrassas by a central board of examiners appointed by the Director, and those of the junior classes by the local officers, but re-affirming the policy of the Resolution of 1873, of leaving each madrassa to fulfil its mission of offering the Mahomedan community of the place just that particular form of education which shall appear to them desirable. At the same time the principle was laid down that the object with which the madrassas were founded defines the limits within which the courses of study may vary. The *raison d'être* of these institutions is that they supply what cannot be obtained elsewhere: an English education may be

obtained most conveniently at the ordinary schools of the country, and therefore it is not necessary that madrassas should offer an English education.

In the grant for normal schools it was found possible to effect a reduction from Rs. 1,33,000 to Rs. 85,000. There were 41 Government training schools on the 31st March 1876, of which 13 were closed during the subsequent year by the abolition of the second and third grade normal schools in nearly all advanced districts. Within the three or four years during which these training schools had been at work the great majority of the gurus who were capable of improvement had been trained. For those who were incapable of improvement the school was unnecessary. For the provision of new teachers as the old drop off, the pupils of middle and intermediate schools afford an ample supply. Where schools of secondary instruction exist, therefore, in sufficient numbers, no harm has been done by abolishing normal schools for the training of gurus.

The following gives the outturn of certificated gurus for the year :—

First grade	321
Second „	359
Third „	38
Total						718

First grade normal schools were affected by the orders of the year to this extent, that while the establishment of each was maintained, the stipend grants were reduced, and the schools were made examining as well as teaching bodies. The first examination under the central system was held in December 1876. Besides the pupils of normal schools, the examination was open to private candidates for vernacular masterships, but only two appeared. The pupils of each year are separately examined; and certificates of the first, second, or third grade given to successful pupils of the third-year, second-year, or first-year classes. Only those who have passed the examination in the first grade are eligible for head-masterships in any middle vernacular school; those who pass in lower grades are eligible for inferior masterships, or they may continue to read in the normal school to the completion of the course with the object of gaining a higher certificate. The result of the examination in all grades is as follows: 163 candidates passed out of 278 that appeared :—

1st Grade Certificates	Number of candidates	89
			High	2
			Medium	19
			Low	38
			Total passed	59
2nd Grade Certificates	Number of candidates	79
			High	4
			Medium	11
			Low	28
			Total passed	43
3rd Grade Certificates	Number of candidates	110
			High	1
			Medium	15
			Low	45
			Total passed	61

The following statement exhibits the distribution of education under the grant-in-aid system for the last two years:—

	1876.				1877.			
	Number of institutions.	Number of pupils.	Receipts from Government.	Total receipts.	Number of institutions.	Number of pupils.	Receipts from Government.	Total receipts.
			Rs.	Rs.			Rs.	Rs.
Colleges	6	411	22,796	1,03,107	6	556	24,198	1,07,828
Higher English schools	85	9,550	54,087	2,20,992	88	10,365	62,061	3,04,432
Middle	513	27,844	1,57,372	4,48,304	438	25,101	1,46,801	4,28,698
Middle vernacular schools	637	30,985	94,667	2,56,408	556	28,614	87,574	2,45,019
Intermediate English	65	2,598	12,176	31,393
Intermediate vernacular	110	4,298	10,552	28,202
Primary	345	10,267	20,755	52,251	285	8,466	14,025	34,785
Girls' schools	286	8,322	64,676	1,95,274	294	8,195	64,314	1,88,620
Normal	17	733	15,775	40,952	15	852	16,294	46,043
Total	1,889	88,112	4,30,128	13,17,236	1,857	89,045	4,37,995	14,15,020

Abolished aided schools in 1875-76 cost a further sum of Rs. 5,516, and in 1876-77 of Rs. 7,737. These sums are not included in the figures given above, because there are no means of knowing the amount spent on such schools from private contributions; and to include only the Government expenditure interferes with the fair representation of the proportion paid by the people in the total expenditure.

There has therefore been a decrease of 32 schools and an increase of 933 pupils; also an increase of expenditure from Government assignments of Rs. 5,788, and from private funds of Rs. 86,336. Private contributions last year were considerably more than double the Government grants. Middle English education and female education still claim the largest proportional share both of the Government and of the total expenditure.

The grant-in-aid rules fix the maximum proportion that the Government grant given by the committee to a school of each class must bear to the local income; but each district is left to itself to decide on the actual amount of each grant to be given—that is, on the total amount necessary to keep up an efficient staff in schools of each class, and then on the proportion of that amount that shall be awarded to any particular school. As might be expected, these amounts are approximately the same in the several districts of most of the divisions. The Circle Inspector naturally exercises an influence that tends to uniformity within certain limits of variation. But it is satisfactory to notice that even in different divisions the average grants to schools of the same class approach uniformity. Thus in the four districts of the Presidency Division the average grant given to middle English schools is respectively Rs. 25, Rs. 23, Rs. 24, and Rs. 24; and in the Burdwan Division the average grant to middle English schools is respectively in the five districts Rs. 24, Rs. 22, Rs. 24, Rs. 23, and Rs. 28. But more than this, the average grant to middle English schools in the divisions of Presidency, Burdwan, Dacca, and Chittagong is respectively Rs. 24, Rs. 24, Rs. 22, and Rs. 23. In the other divisions the average amount is larger, and varies more

widely: in Bhagulpore, Rajshahye, and Chota Nagpore, it is about Rs. 33 or Rs. 34; in Orissa over Rs. 40; and in Patna as high as Rs. 50. Similarly, in the case of higher English schools, the average grant is in the Presidency Division Rs. 49, in Burdwan Rs. 52, in Dacca Rs. 45, in Chittagong Rs. 45, and in Chota Nagpore Rs. 45. The average in each division in the case of these schools is struck from a smaller number of figures, and is more liable to be affected by exceptional cases. In the case of middle vernacular schools, the most numerous of all the classes of grant-in-aid schools, the average grant in the Presidency Division is Rs. 13, in the Dacca Division Rs. 13, in Burdwan Rs. 14, in Chittagong Rs. 14, in Rajshahye Rs. 14, in Orissa Rs. 15, in Bhagulpore and Chota Nagpore about Rs. 17, and in Patna a good deal more. These figures show a greater uniformity, throughout the more advanced divisions at all events, than might have been expected from a consideration of their entire independence in the management of the grant-in-aid allotments, and they are a proof of the general justice of the distribution of the funds.

The prizes and endowments founded during the year by liberal-minded persons for the encouragement of education are connected with the subject of grants-in-aid in so far as they measure the tendency to substitute private contributions for Government support. A list of these benefactions is accordingly given:—

- (1)—Maharajah Jotendro Mohun Tagore founded two scholarships of Rs. 20 a month each, tenable for one year, at a cost of Rs. 12,000, to be called—
 - (a) the Hara Kumar Tagore Sanskrit Scholarship, awardable to a B.A. studying for the M.A. examination in Sanskrit; and
 - (b) the Prasanna Kumar Tagore Law Scholarship, awardable to a law student for one year.
- (2)—The Victoria Senior Scholarship of Rs. 15 a month, tenable for two years by the best student from the Rungpore College who passes the F.A. examination but does not get a Government scholarship. It was founded by the zemindars of Rungpore.
- (3)—The Victoria Junior Scholarship of Rs. 10 a month for two years, awardable to the best candidate from the Rajshahye Division who passes the Entrance examination but does not get a Government scholarship.
- (4)—Kali Prasad Sen's Widow's Scholarship of Rs. 8 a month, awardable to the best candidate for a junior scholarship from the Rungpore district who does not get a Government scholarship.
- (5)—Baboo Lutchmun Prosad Gorgo's Scholarship of Rs. 5 a month, tenable in the Midnapore College.
- (6)—Maharajah of Mohurbhunj's Scholarships for Cuttack, viz.—
 - (a) Rs. 5 a month for one year, tenable in the Cuttack Medical School; and
 - (b) Rs. 7 a month for one year in Cuttack College for poor natives of Orissa, to enable them to prosecute their studies in the college classes.

- (7)—The Maharani of Tikaree, in the Gya district, granted an endowment of Rs. 30,000 for the support of the local English school, and also founded three scholarships of Rs. 2 a month, tenable at the school for two years.

The strength of the inspecting staff, though considerably increased under recent orders, is still very insufficient for the number of schools which are now under the

Inspecting agency.

supervision of the department. Including two special officers, the number of Deputy Inspectors and Sub-Inspectors of Schools is 202, and there are no less than 21,532 schools under inspection, giving each officer an average of above 106 schools to supervise. Proposals are under consideration for re-distributing the present inspecting circles and for appointing Assistant Inspectors. But it is evident that if every school is to be locally visited the present inspecting agency ought to be doubled; and this would involve an expenditure which it is entirely beyond the power of the Government to incur. The only practicable solution of the difficulty is that which has already been adopted in several districts, viz. to bring the primary schools, which far outnumber the schools of all other grades, under a system of payment by results, which will in a great measure dispense with the necessity for local visits.

The question of the education of European and East Indian

Education of Europeans
and Eurasians.

children was discussed in last year's report, and it was then remarked that sufficient school accommodation had been provided for this class of the community. Accordingly, no increase in the number of these schools was found necessary during the year, but some additional aid was given, in the form of capitation grants, to several of the Calcutta schools. From the census returns of Calcutta it appears that there are about 3,500 European and East Indian children of school-going age in the town; and the returns show that 2,942 children were actually attending schools aided by Government on the 31st March 1877. Adding to these the children at unaided schools, there appears no reason to think that any considerable want remains to be supplied.

A general summary of the results of the year, as gathered from

Summary.

the foregoing paragraphs, shows that while the work of the department has been conducted under some difficulties and disadvantages, considerable progress has been made; and a still further measure of success may be hoped for in the future. In particular, the educational history of the year was characterized by two circumstances which appear to afford special ground for satisfaction—the large increase in the funds contributed by the people themselves to schools of every class, and the marked success of the candidates from Bengal schools and colleges in the examinations of the University. The former of these shows that the present system of public instruction is founded upon a secure basis,—that it is not merely a Government department, but a national institution. The latter affords a proof that this confidence is not misplaced; that the contributions, both of Government and of the community, are usefully expended; and that while the basis of education in Bengal is broad, the superstructure also is high. These

are results upon which both the officers of the department and the people at large may justly be congratulated.

In the Report for last year the establishment of the Art Gallery was noticed. It opened with 127 pictures, 33 of which were the property of the institution by purchase or gift, and the rest were obtained on loan for the occasion, and have been since returned to their respective owners.

The object of Government in establishing an Art Gallery was to furnish means of practical instruction for the students of the School of Art, and for the use of private students or practising artists on payment of fees. The gallery is not yet a very useful institution, but it is hoped that it will become more valuable in the course of time, as works of art are added by purchase or gift.

It has been found impossible in the present state of the provincial finances to grant it a large subsidy; but considering the importance of maintaining it for the sake of the School of Art, the Lieutenant-Governor has directed that a sum of Rs. 10,000 be annually provided on this account. Out of this amount it is estimated that there will be a sum of about Rs. 5,000 available for the purchase of works of art.

The Art Gallery is attached to, and forms part of, the School of Art, and the Principal of the latter institution, Mr. Locke, is the officer in charge of, and responsible for, the management of the Art Gallery. A committee has been appointed to assist Mr. Locke with their advice and support in matters relating to the gallery.

The gallery will be open to the public during such days and hours as are fixed by the committee with the approval of Government.

Literature and the Press.

IN 1873 the arrangements for publishing, in the several native languages of Bengal, the Acts and orders of Government came under review, and it was found that both the *Bengalee* and the *Ooriyah Gazettes*, which are supposed to be the official organs of publication for Bengal proper and Orissa respectively, contained translations of all those legislative Acts and orders of Government which appeared in the *Calcutta Gazette*. The *Urdu Gazette*, however, which was published by authority of the Government of the North-Western Provinces at Allahabad, and which was supposed to be the organ of publication for Behar, was found deficient in all the information which the Government of Bengal wished to impart to the people. It published the Acts of the Indian Legislature and the orders of the Government of India and of the High Court, but not those of the Bengal Government, notwithstanding that payments were made from the revenues of Bengal for the publication. This circumstance, coupled with the fact that Urdu was not the vernacular of the great mass of the people of Behar, suggested to Sir George Campbell the desirability of establishing a Government Gazette in the Hindi language for that province. It was accordingly resolved that a separate journal, to be called the *Behar Gazette*, should be published weekly at Bankipore under the supervision of the Commissioner of Patna and the Inspector of Schools, Behar Circle. But the occurrence of the famine in 1874 caused the project to be deferred.

In 1876, when the pressure of the famine was over, the scheme for starting the Gazette was revived, and it was finally determined by Sir Richard Temple that it should be published fortnightly at Bankipore under the supervision of the Commissioner of Patna. In order that Government might not be involved in any considerable expense on this account, the arrangements for starting the Gazette were made with strict regard to economy.

It was at first expected that this publication would not entail upon Government any large additional expenditure. It was proposed to stop the contribution hitherto paid towards the publication of the *Urdu Gazette* at Allahabad, as well as the subscriptions of the Educational Department to the *Chashm-i-Illum*, a Hindustani journal, which was distributed to Government schools in Behar. As, however, Urdu is the language of the higher classes in Behar, it has not been found possible as yet to dispense with the payments made to the North-Western Provinces Press for copies of the legislative Acts in Urdu; but eventually it is expected that the Behar Press may be able to undertake this work.

The savings from the subscriptions to the *Chashm-i-Ilum*, and the receipts from the sale of the *Behar Gazette* and advertisements therein, will cover in some measure the expenses of the new publication, which will, it is hoped, serve the double purpose of imparting useful knowledge to the people and making them understand and appreciate the motives of many public measures.

The number of native newspapers supplied to the Bengal Library during the year under review, exclusive of 23 which ceased to exist during that period, was 35, against 53 received in 1875-76. Of this number 4 were daily, 26 weekly, 1 bi-monthly, and 4 monthly: all were published in Bengali, with the exception of 1 bi-monthly in Urdu, 1 weekly in Hindi, 2 weekly in Urdu, and 1 weekly in Persian. Of the 35 papers supplied to the library 11 are published in Calcutta, 8 in the Dacca Division, 8 in the Presidency Division, 3 in the Patna Division, 4 in the Burdwan Division, and 1 in the Rajshahye and Cooch Behar Division. From the Chittagong, Orissa, and Chota Nagpore Divisions no papers are received in the library. The large reduction in the number of the vernacular newspapers is directly traceable to the spread of English education, which is continually increasing the demand for cheap English papers and reducing the number of subscribers to vernacular newspapers.

The total number of uni-lingual books received in the Bengal Library during the year under review (exclusive of periodicals) was 1,045, against 1,010 received in 1875.

The subjoined table shows the classification of the books according to languages and subjects :—

Languages in which written.	Number of original works.	Number of translations and reprints.	Total.	Subject-matter of work.	Number of original works.	Number of translations and reprints.	Total.
Bengali	351	309	660	Biography	7	4	11
English	130	21	151	Drama	68	9	77
Sanskrit	37	36	73	Fiction	18	18	36
Uriya	40	18	58	History	9	13	22
Urdu	16	1	17	Language	31	64	95
Hindi	15	13	28	Law	11	4	15
Assamese	4	1	5	Medicine	41	15	56
Persian	5	5	Poetry	147	69	216
Sonthal	1	2	3	Politics	1	1
Arabic	3	3	Philosophy	7	1	8
Mussulmani-Bengali	23	9	37	Religion	107	78	185
Garo	1	1	Science (mathematical and mechanical)	20	26	46
Jaintia	1	1	Science (natural and other)	34	27	61
Khasi	1	1	Travels and voyages
Latin	1	1	Miscellaneous	132	84	216
Mondari (Coh)	1	1				
Total	633	412	1,045	Total	633	412	1,045

There were also 151 books bi-lingually and three tri-lingually arranged. Of Bengali periodicals four have during the year died out, but their places have been supplied by others.

The total number of publications of all kinds received in the Bengal Library during the year was 1,512, against 1,529 received in 1875. Of this number 145 were in English and the remaining 1,367 in other languages. Their distribution as regards place of publication is exhibited below :—

Place of publication.	Number published.	Place of publication.	Number published.
Town of Calcutta ...	1,106	Patna Division ...	40
Dacca Division ...	120	Assam „ ...	1
Presidency „ ...	76		
Burdwan „ ...	59		
Orissa „ ...	59		
Rajshahye „ ...	51	Total ...	<u>1,512</u>

No publications were received from the Bhagulpore and Chittagong Divisions.

The number of books and their copyright registered under Act XXV of 1867 in the office of the Inspector-General of Registration was 1,018 in 1876-77, against 1,082 in the preceding year; while in district offices the figures were 445 and 437 respectively, thus showing a decrease of 56 in the total number of publications registered during the past year.

The expenditure incurred under section 10 of the Act in the purchase of books amounted to Rs. 2,543-12, against Rs. 3,023 in the previous year, and the fees levied under section 18 to Rs. 78, against Rs. 84 in 1875-76. Fifteen prosecutions were instituted under section 16 of the Act for delay in the delivery of books. In all these cases the printers were convicted and fined.

VIII.—MISCELLANEOUS.

Economic Museum.

THE Economic Museum committee on the 31st March 1877 stood thus:—

- * Mr. H. A. Cockerell, c.s., Chairman.
Colonel Hyde, R.E. (England.)
- * Mr. H. B. Medlicott, Superintendent, Geological Survey.
Dr. G. King, Superintendent, Botanic Gardens.
Dr. W. Schlich, Conservator of Forests.
Mr. Robert Knight.
Mr. C. B. Clarke, Inspector of Schools (England).
- * Rai Kanny Loll Dey, Bahadoor.
Mr. V. Ball, Geological Survey.
Dr. D. Waldie, Baranagore Chemical Works.
Dr. S. Kurz, Botanic Gardens.
- * Mr. H. W. I. Wood, Secretary, Chamber of Commerce.
- * Mr. A. H. Blechynden, Secretary, Agricultural and Horticultural Society.
Mr. F. Eisenlohr (firm of Messrs. Ernsthausen and Oesterley).
- * Colonel J. F. Tennant, R.E., Master of the Mint, Calcutta.
- * Mr. C. H. Wood, Chemical Examiner to Government.
Mr. H. Beverley, c.s.
Baboo Pratapa Chandra Ghosha, Inspector of Registration offices.
- * Mr. H. H. Locke, Secretary.

The members whose names are marked * form the executive sub-committee. There have been thirty meetings of this sub-committee, and three meetings of the full committee, during the year.

The Hon'ble Mr. Justice Phear, the first Chairman of the committee of management, resigned that office on the 8th August 1876, owing to his leaving India. He was succeeded by Mr. J. A. Crawford, Collector of Customs, who held the office till the 3rd March 1877, when he also left India. Mr. H. A. Cockerell, Commissioner of Burdwan, was then appointed Chairman. On the retirement of Mr. Crawford the

committee recorded a minute expressing their opinion "that this Museum had from its commencement been most fortunate in respect to the way in which the office of Chairman had been filled; in the first place in having had a gentleman of the varied knowledge and great ability and energy of Mr. Justice Phear, and secondly in having had as his successor Mr. Crawford."

At the close of the year 1875-76 local committees had been formed in all the districts of Bengal except in Manbhoom and Cooch Behar. Committees for these districts have, however, during the past year been constituted, and the network of local committees is thus complete. There are now 56 local committees, 45 being for districts and the Cooch Behar state and 11 for important sub-divisions.

During the year contributions have been received from 40 of these local committees.

Besides the collections made for the Museum by its local committees, contributions have been received from other officials and gentlemen who take an interest in the Museum.

Altogether the total number of specimens added to the Museum during the year was 4,211. This exhibits an increase of more than 50 per cent. upon the rate at which specimens had come in during the two previous years, and testifies to the greater efficiency with which the local committees are working.

The specimens received represent very nearly every class of the raw produce and manufactures of Bengal, but principally the following:—

Food-grains.	Indigenous drugs.
Oil-seeds.	Cotton, raw and manufactured.
Fibres.	Silk, cocoons, thread, and fabrics.
Timbers.	Tea.
Honey and wax.	Pottery.
Dye-stuffs and tans.	Metal-ware.

The total number of specimens on the Museum register on the 31st March 1877 was 9,514.

Considerable progress has been made in the classifying and arranging of the Museum specimens, although very much yet remains to be done; and with so small a staff as the Museum possesses, much time must elapse before it can be satisfactorily accomplished.

The central committee are now endeavouring to obtain reports from commercial experts upon the Museum collections in the several classes of products which are represented.

In the first hall of the Museum building, which is devoted to displaying the geographical distribution of the products of Bengal, a series of maps has been placed over the cases, so coloured as to show the visitor, as he passes from one set of cases to another, the situation and extent of the particular portions of the province whose products lie before him.

The trustees of the Indian Museum have presented to the Economic Museum Dr. Forbes Watson's great work on the Textile Fabrics of India, in 18 volumes. This work is one which is especially appropriate in such a Museum as this, and is a very valuable contribution. It has been placed in the second hall, which is devoted chiefly to fibres and fabrics.

Communications have also been received from the Society of Arts, London, the Director of Kew Gardens, and from Mr. Twining, the founder of the Economic Museum at Twickenham, who has presented several books and papers upon economic subjects.

* A marked improvement has taken place in the working of the local committees throughout the province. There may still perhaps be one or two exceptions, but as a rule these committees appear to be taking a greater interest in the project under which the Economic Museum was established. It is an important portion of the work intended to be accomplished by this Museum that there should be, as part of a regular organization, three or four of the most intelligent residents of every district whose attention is constantly and regularly directed to the economic products of their district.

Ecclesiastical.

THE ecclesiastical establishment entertained or partly paid by
Government in Calcutta and the districts of
Bengal on the 31st March 1877 was as follows:—

Lord Bishop of Calcutta	1
Archdeacon of Calcutta and Commissary to the Lord Bishop	1
Domestic Chaplain to the Lord Bishop	1
Registrar of the Diocese and Secretary to the Lord Bishop	1
Chaplains of the Church of England	18
Ditto ditto of Scotland	1
Ministers of the Additional Clergy Society	10
Priests of the Roman Catholic Church, including the Vicar Apostolic of Western Bengal	5

Thirteen marriages were solemnized under the Brahmo Marriage Act (Act III of 1872) during 1876-77, being an increase of seven over the number recorded in the preceding year. Of these four were registered at Calcutta, three at Bhowanipore in the suburbs of Calcutta, two at Mymensing, and four at Dacca.

Working of the Brahmo Marriage Act.

Stationery.

THE following figures compare the results of the working of the Stationery Department in 1876-77 and in the previous year:—

		1875-76. Rs.	1876-77. Rs.
Value of stock at beginning of the year	...	6,68,011	4,75,924
Ditto received from England during		8,67,853	10,41,431
Ditto received back from various offices		45,018	20,890
Cost price of local purchases	...	79,383	83,633
Total value	...	<u>16,60,265</u>	<u>16,21,881</u>
Value of stock issued during the year	...	11,84,342	12,47,766
Amount of all charges	...	42,128	45,831
Total	...	<u>12,26,470</u>	<u>12,93,597</u>
Value of stock in hand at close of year	...	<u>4,75,924</u>	<u>3,74,114</u>

The expanding nature of these transactions is a prominent feature in the operations of the year 1876-77.

The increase over the preceding year is chiefly in the following articles:—drawing paper, tracing paper, hand-made imperial, super-royal, royal, medium, and demy papers; machine-made double foolscap, white and brown cartridge, and blotting papers; super-royal, double royal, medium, demy, and foolscap printing papers; and water-marked paper for bills of exchange. This increase is chiefly attributable to the inclusion in the accounts for the first time of the supplies received from England for the Surveyor-General, the Telegraph Department, and the presses in the North-West Provinces, Lahore, and Jubbulpore, and to the arrival in 1876-77 of a large portion of the supply required for 1877-78.

In regard to the consumption of stationery the figures, except as regards the issues to officers under the Government of Bengal, are not within the control of this Government. The indents on the stationery stores in England are regulated on a fixed plan, and include a year's consumption calculated on the average of the past two and a half years, after taking into account the stock on hand. But the annual indent is seldom sufficient, and from various causes a supplementary indent becomes necessary. There is a tendency to increased consumption consequent on the general increase of work in all departments.

The total expenditure incurred for articles of stationery of every description during each of the four years noted below is as follows, including local purchases and supplies from England:—

	Rs.				
1861-62	3,27,295
1871-72	6,04,932
1875-76	9,47,237
1876-77	11,25,067

The increase last year over the outlay in the three previous years under comparison is 243, 85, and 18 per cent. respectively: in other words, the expenditure in 1876-77 is three and a half times the cost in 1861-62, nearly double what it was in 1871-72, and about one-sixth in excess of the outlay in 1875-76.

The subjoined figures show the value of stationery purchased from the Stationery Office by public officers not entitled to free indent during 1876-77 and the previous two years:—

Year.	Value of stationery supplied.			Amount of commission.			Total.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
1874-75 ...	11,718	1	9	585	14	6	12,304	0	3
1875-76 ...	12,841	13	3	642	1	6	13,483	14	9
1876-77 ...	16,637	15	0	831	14	5	17,469	13	5
Increase over 1875-76 ...	3,796	1	0	189	12	5			

Out of the total amount of Rs. 17,469-13-5 in 1876-77 Rs. 8,359-9-9 were adjusted by transfer in the books of the Accountant-General of Bengal. The value of stationery supplied increased by Rs. 3,796-1-9, or 29·5 per cent., while the number of requisitions was more by 117 in 1876-77 than in 1875-76.

The value of the articles found damaged during the year amounted to Rs. 4,190-0-5. The net losses on account of this damaged stock was Rs. 2,606-8, against Rs. 387-3-5 in 1875-76. Rs. 2,373-4-9 of this large amount represents the loss sustained by Government on a shipment of steel pen nibs found to be corroded on arrival owing to some chemical in the paste used in making the boxes. The loss on the other articles is Rs. 233-3-3 only, which is less than the loss of the previous year.

The sale proceeds of canvas coverings of bales, hoop iron, old packing cases, &c., amounted during the year to Rs. 2,295-15-6, against Rs. 2,597-14-6 in 1875-76. The large proceeds of 1875-76 are said to be due to the sale in that year of a quantity of iron hoops of the stock of 1874-75.

During the year under review the Form Store Branch was retransferred from the Alipore Jail Press to the Stationery Office. This department has laboured under many disadvantages, owing chiefly to the inability of the Alipore Jail Press to execute with the required promptitude the orders for printing forms, which was the cause of several complaints of delay in complying with indents, and ultimately led to a block in the work. The press attached to the Bengal Secretariat was resorted to, and its co-operation has been of considerable value in working off the arrears.

The question of the submission of consolidated indents by heads of departments, with a view to impose a sufficient check on the expenditure of stationery stores, was disposed of during the year. The plan is now in operation, but it will take some time to bring it into complete working order.

In accordance with the orders of the Government of India, the requirements of colleges and schools as regards English stationery were met during 1876-77 from the Stationery Office at Calcutta.

The Government of India inquired whether certain descriptions of paper manufactured in Calcutta could not be substituted for similar paper indented for from England, so as to reduce the cost of future indents on the Secretary of State for India. This inquiry has resulted in a direction to the Superintendent of Stationery to purchase 2,000 reams in all of different descriptions of paper manufactured at the Bally Paper Mills, and to report how it answers.

The work of the Stationery Department has greatly increased of late, and there are indications that the increase is likely to continue for some time. The increase is chiefly due to the Superintendent having to receive and transmit all stationery required by the presses in the North-Western Provinces, Lahore, and Jubbulpore; to the issue of stationery to zillah colleges and schools, to the Land Registration Department, the State Railways and Irrigation Departments; and also to the new system of accounts introduced under the order of the Government of India.

II—(Judicial).—Statement showing the religion, age, and previous occupation of the convicts in the jails of Bengal during 1876	lxiv
III—(Judicial).—Statement showing the convicts in the jails of Bengal during 1876 according to the nature and length of sentence.	lxv
IV—(Judicial).—Statement showing the convicts in the jails of Bengal during 1876 who had been previously convicted	lxv
V—(Judicial).—Statement showing escapes and recaptures of convicts in the jails of Bengal during 1876	lxvi
VI—(Judicial).—Statement showing the offences committed by the convicts and the punishments inflicted on them in the jails of Bengal during 1876	lxvii
VII—(Judicial).—Statement showing the state of education of the convicts imprisoned in, and released from, the jails of Bengal during 1876	lxviii
VIII—(Judicial).—Statement showing the employment of convicts as prison officers in the jails of Bengal during 1876	lxviii
X—(Financial).—Statement showing the expenditure in guarding and maintaining the prisoners in the Jails of Bengal during 1876, excluding the cost of building new jails and of additions, alterations, or repairs	lxix
XI—(Financial).—Statement showing the expenditure in guarding and maintaining the prisoners in the jails and lock-ups of Bengal during 1876 (excluding cost of building new jails, of additions, alterations, and repairs), compared with the expenditure on the same account of the three preceding years	lxx
XII—(Financial).—Statement showing the employment of the convicts in the jails of Bengal during 1876	lxx
XIII—(Financial).—Statement showing the results of the employment of the convicts in the jails of Bengal during 1876	lxxi
XIV—(Financial).—Statement showing the expenditure on constructing new jails, and on additions, alterations, and repairs, with the gross and net cost of the prisoners in the jails of Bengal during 1876	lxxii
XV—(Vital).—Statement showing the sickness and mortality among the convicts in the jails of Bengal during 1876	lxxiii
XVI—(Vital).—Statement showing the admissions and deaths from the chief diseases among the convicts in the jails of Bengal during 1876	lxxiv
XVII—(Vital).—Statement showing the sickness and mortality among under-trial, convicted, and civil prisoners severally, and the mortality from fevers, bowel complaints, and cholera in each class of prisoners in the jails of Bengal during 1876	lxxv
XVIII—(Vital).—Statement showing the mortality according to age among the convicts in the jails of Bengal during 1876	lxxvi
XIX—(Vital).—Statement showing the mortality among the convicts in the jails of Bengal during 1876 according to length of imprisonment	lxxvii
XX.—Statement showing particulars regarding civil prisoners in the jails and lock-ups of Bengal during 1876	lxxviii
XXI.—Statement showing particulars regarding prisoners under trial in the jails and lock-ups of Bengal during 1876	lxxix
XXII.—Statement showing the expenditure on guarding and maintenance, and hospital statistics, of the convicted and under-trial prisoners in the lock-ups of Bengal during 1876	lxxx
XXIII.—Statement showing the sentences passed upon convicted prisoners admitted in the jails of Bengal during 1876	lxxx1
XXV.—Statement showing statistics of mortality in jails and lock-ups, grouped geographically	lxxxii
D.—POLICE.—	
1.—Statement showing strength and cost of police during 1876, including the railway police	lxxxv
2.—Statement showing distribution and employment of the police force, including the railway police, during 1876	xc
3.—Statement of village and town police not subject to rules of regular police during 1876	xciv
4.—Return showing equipment, discipline, and general internal management of the force during 1876, exclusive of that under the Commissioner of Police, Calcutta	xcvi
5.—Return showing the race and religion or caste of officers and men employed in the police during 1876, exclusive of the force under the Commissioner of Police, Calcutta	xcvii

D.—POLICE—*concluded.*

PAGE.

6.—Return showing the number of persons convicted in cognizable and non-cognizable cases during the year 1876 in the several districts of Bengal	xcviii
7.—Return of criminal cases cognizable by the police during 1876, exclusive of cases in Calcutta	xcix
8.—Return of criminal cases not cognizable by the police during 1876, exclusive of cases in Calcutta	cvi
7a.—Return of criminal cases cognizable by the police during 1876 in Calcutta and the suburbs	cx
8a.—Return of criminal cases not cognizable by the police during 1876 in Calcutta and the suburbs	cxviii

F.—MARINE—

1.—Statement showing the various Government ships and vessels employed in Bengal in the year 1876-77	cxxii
2.—Statement showing the number of officers and men employed otherwise than in Government vessels under the Government of Bengal in the year 1876-77	cxxiii

PART III.

STATISTICS OF PRODUCTION AND DISTRIBUTION—

A.—FINANCE—

1.—Account of the gross and net revenues of the province of Bengal for the year 1876-77	cxxiv
2.—Account of the expenditure from the net income of the province of Bengal for the year 1876-77	cxxv

B.—PUBLIC WORKS—

1.—Statement of expenditure in the Public Works Department in the province of Bengal during the year 1876-77	cxxviii
2.—Statement showing the income and expenditure of reproductive works in the Public Works Department in Bengal during 1876-77	cxxix

C.—RAILWAYS—1876

cxxx

D.—MARINE—

1.—Statement showing the various Government ships and vessels employed under the Governments of India and Bengal in 1876-77	cxxxi
2.—Statement showing the number of officers and men employed otherwise than in Government vessels under the Government of Bengal in 1876-77	cxxxi

H.—TRADE—

I.—Quantities and value of the principal and other articles of merchandise, and value of treasure, imported from foreign countries into the Presidency of Bengal during 1875-76 and 1876-77	clxxxiii
II.—Quantities and value of the principal and other articles of foreign merchandise and Indian produce and manufactures, and value of treasure, exported to foreign countries from the Presidency of Bengal during the official years 1875-76 and 1876-77	cliv
III.—Statement of customs duty collected in the principal and other articles of merchandise subject to duty, on import and export, at ports in the Presidency of Bengal during 1875-76 and 1876-77	clxxiv
IV.—Total value of merchandise (distinguishing country and foreign) and treasure imported and exported coastwise into and from the Presidency of Bengal during 1875-76 and 1876-77	clxxv
V.—Number and tonnage of steam and sailing vessels, distinguishing their nationality, which entered and cleared with cargoes from and to foreign countries at ports in the Presidency of Bengal in 1876-77, compared with the totals of 1875-76	clxxvi
VI.—Number and tonnage of steam and sailing vessel, distinguishing their nationality, which entered and cleared with ballast from and to foreign countries at ports in the Presidency of Bengal in 1876-77, compared with the totals of 1875-76	clxxx
VII.—Number and tonnage of steam and sailing vessels, distinguishing their nationality, employed in the interport trade, which entered and cleared with cargoes and in ballast in the Presidency, of Bengal in 1876-77, compared with the totals of 1875-76	clxxxiv

	Page.
I.—COINAGE AND CURRENCY—	
1.—Coinage, 1876-77	clxxxviii
2.—Paper currency for the year 1876-77	cxc
K.—CHARITABLE INSTITUTIONS—	
Charitable Institutions under Government superintendence in the province of Bengal during 1876	cxcii

PART IV.

STATISTICS OF INSTRUCTION—

A.—ECCLIASTICAL—	
Return of persons according to the religious denominations in the Bengal Presidency for the year 1876-77	cxviii
B.—EDUCATION—	
1.—The University.—Result of the examination of the University of Calcutta during 1876-77	clxxx
2.—Return of colleges and schools, and the scholars attending them, for the year 1876-77	cxcv
3.—Receipts and expenditure of educational establishments in the Lower Provinces of Bengal for the year 1876-77	cxcviii
4.—Distribution of Government, aided, and inspected schools in the several districts and divisions under the Government of Bengal for the year 1876-77	cc
C.—SCIENTIFIC AND LITERARY—	
1.—Return of Scientific and Literary Societies in Bengal for the year 1876-77	ccii
2.—The Press.—Annual return of presses worked and newspapers and periodicals published thereat in the Bengal Presidency during 1876-77	ccx

PART V.

STATISTICS OF LIFE—

A.1.—Statement showing births and deaths among the population of Calcutta and the Suburbs of Calcutta, and among other classes in respect of which particulars have been ascertained during the year 1876	ccxvii
A.2.—Statement showing the statistics of births and deaths in selected areas in Bengal during the year 1876	ccviii
B.—Return showing the diseases treated, and the deaths from each class of disease, in the principal hospitals of Bengal during 1876	ccxxii
C.—Return of vaccine operations in Bengal during 1876	ccxxiv

PART I.

STATISTICS OF PHYSICAL, POLITICAL, AND FISCAL GEOGRAPHY.

A.—PHYSICAL GEOGRAPHY.

*Geographical Area of the Territories under the Civil and Political Control
of the Lieutenant-Governor of Bengal in 1876.*

Principal Geographical Divisions.					Total area in square miles.
BRITISH POSSESSIONS DIRECTLY ADMINISTERED—					
Bengal	69,749
Behar	44,174
Orissa	9,053
Chota Nagpore	27,883
Total directly administered					150,859
TRIBUTARY ESTATES—					
Cooch Behar	Tributary Estate	1,307
Orissa	ditto	ditto	15,187
Chota Nagpore	ditto	ditto	16,025
Hill Tipperah	2,869
Total					35,388
NATIVE STATES AND TRIBUTARIES—					
Sikkim	2,600
Total area of Bengal					188,847

3.—*Climate, 1876.*

Places at which observations taken.	RAINFALL IN INCHES.				AVERAGE TEMPERATURE IN THE SHADE.												CLOUD PROPORTION 0 TO 10.		
	January to May.	June to September.	October to December.	Total.	May.				July.				December.				January to May.	June to September.	October to December.

381* advance— 245	96,228	10 5	252	9 0	* Exclusive of 35 square miles of Sone river. Demarcation pretty good; boundary disputes in ten per cent. of the villages.
320					The inquiry as to the village boundaries is being made by the revenue survey establishment, and the boundaries according to the old revenue survey of Shahabad are being upheld as far as possible. Slabs of stones are being imbedded at all trijunction villages.
120 224	98,903	7 11	824	3 1	The establishment left Naini Tal in October 1876 and arrived at Cuttack by the end of November. Immediate arrangements were made for the progress of the combined operations of the professional and cadastral survey. Field operations commenced on the 16th December 1876. To prevent all hindrance to the progress of the work, the settlement officer was requested, as early as the 2nd of August 1876, to supply a sufficient quantity of work, with the proper adjustment and preparation of boundaries. The divisions to be surveyed during the season were decided on. On taking the field, the demarcation was found very defective. The difficulties that the survey has had to contend with have been fully reported from time to time during the field season, so that it is needless to repeat them here. The most serious obstructions to a good outturn of work are (1) the excessively small size of the unit of survey; (2) the want of efficient local labour; and (3) the want of a hearty co-operation of the village people with the ameens. For the least attention to the wants of the survey party payment is demanded. Our utmost endeavours will not produce a low mileage cost, and it is impossible to compete with the extraordinary cheapness of the North-Western Provinces surveys. The cadastral operations extended over zillahs Khoordah, Haldia, and a portion of Dandimal, and the total detailed survey completed on the scale of 32 inches to one mile is 120 square miles in 191 villages. The boundaries of 201 villages, area = 224 square miles, have been surveyed in advance for 1877-78. The detail survey has been very carefully checked, the check lines aggregating 358 linear miles. A severe outbreak of cholera in the district interfered for a time with the progress of the work. There were five deaths in the survey camps, and the Assistant Superintendent was obliged to move his tents from the line of pilgrims.
<i>to the mile.</i>					
130† 40	21,831	14 2	167	15 0	† Besides this an area of six square miles has been surveyed on the scale of 4" to the mile.
100					
<i>Survey.</i>					
6		<i>On Thakbust Maps.</i> "There are a large number of revisions on the 4" work. The Jangal Mehal Pergunnahs boundaries, as far as examined, agree very well with professional survey. For better comparison these boundaries have been plotted on the 4" scale, though the topography is on the 1 inch."
<i>Survey.</i>					<i>On Demarcations in the Field.</i> "The mehal boundaries have been very plainly shown by mud pillars with a bamboo in them. It is feared that a great number of the prism stones have been laid down after the professional survey had surveyed the boundaries, and therefore all of them are not theodolite stations, which they ought to have been."

FISCAL—continued.

Survey Parties in the Lower Provinces for season 1876-77, or from 1st October September 1877—concluded.

Approximate total area in square miles.	Estimated total cost of all kinds, including contingencies for season 1876-77, or from 1st October 1876 to 30th September 1877.	Probable rate per square mile on surveyed area.	REMARKS.
	Rs. A. P.	Rs. A. P.	
1,174	<i>General.</i> "The 4" survey in the Nibir Jangal will give an immense amount of trouble and cause great delay. The 1' survey of the Jangal Mehals is progressing satisfactorily, but the country is very intricate for such a small scale. In 1,174 square miles there are 3,500 villages, besides innumerable tanks, &c. The list of names furnished by the Civil Superintendent of Survey (only as a guide) is very erroneous."
158			
1,535			
1,000	57,319 1 5	57 5 1	"The village boundary triple junctions in main circuits Nos. 5, 7, 8, 9, 11, 12, and 13, which were marked for pukka pillars in season 1875-76, have been twice inspected this year, and omissions reported to the Collector." "The triple junctions in main circuits Nos. 14, 16, 17, 18, 19, and 20, will be marked for pillars by the close of this season." The necessity for tracing up old boundaries in the field and making close inquiry for triple junctions retards the work considerably. The topographical details are examined village by village by European assistants at the time of making the triple junction, and independent purtals or check lines are carried through the circuits. The current field season will close some time in June. The demarcation work in Chur Hubashpore, ordered in No. 15, dated 26th January 1877, has seriously interfered with progress in district Backergunge.

6.—Land Revenue.

1	2	3	4	5	6	7	8	9	10	11
DESCRIPTION OF REVENUE.	REVENUE FOR 1875-76.		REVENUE FOR 1876-77.		Cost of collections.	Net collections during the year.	Net outstanding balances.	Number of sales for arrears of revenue.	Revenue of estates sold.	Cause of increase or decrease of revenue, with explanation of any items realized in addition to the annual assessed revenue.
	Assessed.	Realized.	Assessed.	Realized.						
From settled estates bearing revenue in past year	3,33,36,802	3,53,46,188	3,48,76,162*	3,46,87,307	3,46,87,307	12,83,687	Rs.	* The increase in the demand is nominal, being due to the inclusion in the demand of 1876-77 of all sums excluded last year on account of their not being realizable within that year.
From settled estates added to revenue roll during present year ...	1,47,706	1,52,330	2,43,568†	1,98,360	1,98,360	15,874(2)	† The increase is attributable, as usual, to settlements at progressive rate, to re-settlement at enhanced rates, and to fresh settlement of newly reclaimed and acquired lands.
From settled estates taken off revenue roll during present year ...	1,59,866	84,219‡	‡ The decrease is due to dilution and deterioration of lands, &c.
Collections from Government estates ...	12,31,210	14,04,664	16,91,833	16,34,066	48,238	15,85,848	6,19,783	
Income from sale of Government estates	90,743	5,684	
Miscellaneous land revenue not included in above	1,66,943	1,48,217 (b)	43,921	
Total	34,55,552	3,71,60,863	3,67,27,341	3,66,73,654	48,238	3,64,71,515	19,63,215	496	70,548	

(a.) These amounts will not correctly result from subtracting the figures of column 5 from column 4, owing to arrear collection (Ra. 13,98,711) having been included in column 5, while the arrear balances have not been taken into account in column 4, while both arrear balances and arrear collections are taken into account in column 8. There is also a further difference *per contra* of Ra. 76,117 on account of remission.

(b.) This item includes forest revenue.

PART II.

STATISTICS OF PROTECTION.

A.—LEGISLATIVE.

1.—Statement of Acts passed by the Legislature of the Province of Bengal in 1876-77, and sanctioned as required by Law.

TITLE OF ACT.	By whom proposed.	Object and character of Act.	Date on which sanctioned.
<i>Act V (B.C.) of 1876.</i> An Act to amend and consolidate the law relating to municipalities.	Hon'ble Mr. Dampier ..	To amend and consolidate the whole municipal law in the province. This Act takes the place of the District Municipal Improvement Act, the Towns' Police Act, the District Towns' Act, the special Pucca Municipal Act, and the Poorer Sanitation Act. It also does away with the old Towns Improvement Act of 1859, the Chowkidaree Act of 1856, and the Special Howrah Municipal Laws of 1857 and 1858.	Lieutenant-Governor's assent, 18th April 1876. Governor-General's assent, 10th June 1876.
<i>Act VI (B.C.) of 1876.</i> An Act to provide for inquiry into disputes regarding rent, and to prevent agrarian disturbances.	Hon'ble Mr. Dampier ..	With the object of preventing agrarian disturbances, this Act provides a special procedure for inquiry into, and settlement of, disputes regarding rent in places where serious disputes exist respecting the adjustment of rents, or as to arrears of rent.	Lieutenant-Governor's assent, 21st April 1876. Governor-General's assent, 10th July 1876.
<i>Act VII (B.C.) of 1876.</i> An Act to provide for the registration of revenue-paying and revenue-free lands, and of the proprietors and managers thereof.	Hon'ble Mr. Bell ..	To provide a complete system of registration of all revenue-paying and revenue-free lands, and of the proprietors and managers thereof.	Lieutenant-Governor's assent, 22nd July 1876. Governor-General's assent, 9th August 1876.
<i>Act VIII (B.C.) of 1876.</i> An Act to make better provision for the partition of estates.	Hon'ble Mr. Dampier ..	To consolidate and amend the law relating to the partition of estates.	Lieutenant-Governor's assent, 26th August 1876. Governor-General's assent, 18th September 1876.
<i>Act I (B.C.) of 1877.</i> An Act to amend the Jute Warehouse and Fire Brigade Act, 1872, and Bengal Act II of 1875.	Hon'ble Mr. Bell ..	To make amendments in the Jute Warehouse and Fire Brigade Acts, which were rendered necessary by the substitution under the Calcutta Municipal Consolidation Act, 1876, of Municipal Commissioners for Justices of the Peace in the administration of the municipal affairs of the town of Calcutta.	Lieutenant-Governor's assent, 19th December 1876. Governor-General's assent, 17th January 1877.
<i>Act II (B.C.) of 1877.</i> An Act to provide for the levy of a cess for the construction, charges, and maintenance of provincial public works.	Hon'ble Mr. Reynolds ..	To levy a cess on immovable property, and to apply the same to the construction, charges, and maintenance of provincial public works.	Lieutenant-Governor's assent, 11th May 1877. Governor-General's assent, 28th May 1877.

A.—LEGISLATIVE—concluded.
3.—Statement of Bills proposed or pending in the Legislature of the Province of Bengal in 1876-77.

TITLE OF BILL.	By whom proposed.	Object and character of Bill.	When introduced.	If pending, why; and in what state.
Bill to consolidate the law relating to the excise revenue in the Presidency of Fort William in Bengal.	Hon'ble Mr. Reynolds	To consolidate the laws relating to the manufacture of spirits and the sale of spirituous and fermented liquors and intoxicating drugs, and the collection of the revenue derived therefrom.	4th November 1876	Passed by the Bengal Council on the 31st March 1877 and assented to by the Lieutenant-Governor on the 10th April 1877. The assent of the Governor-General was withheld on technical grounds.
Bill to amend the law relating to the Court of Wards within the provinces subject to the Lieutenant-Governor of Bengal.	Hon'ble Mr. Schaleh...	To amend the law relating to the Court of Wards ...	4th November 1876	Passed by the Bengal Council on the 7th April 1877, and assented to by the Lieutenant-Governor on the 27th April 1877. The assent of the Governor-General was withheld on the ground that certain provisions of the Bill are at variance or inconsistent with the provisions of the new Civil Procedure Code.
Bill for the regulation of the ghatwali police in the district of Bankoora.	Hon'ble Mr. Bell ...	To enact rules for the appointment of ghatwals in the district of Bankoora, and also more clearly to determine the duties and liabilities of such ghatwals.	4th November 1876	Passed by the Bengal Council on the 14th April 1877, and assented to by the Lieutenant-Governor on the 27th April 1877. The assent of the Governor-General was withheld on the ground that it bars the jurisdiction of the High Court in a certain class of cases, which the local legislature is not competent to do.
Bill to amend the law relating to public ferries.	Hon'ble Mr. Bell ...	To amend the law relating to public ferries, and to give power to vest in district road-cess committees the superintendence of ferries situated upon roads maintained by the funds of such committees, and also to vest the superintendence of other public ferries in any public officer who may be in charge of the road upon which such ferry is situated.	18th November 1876	To provide for the levy of market-dues in towns, for the levy of tolls and mooring dues on navigable rivers, and for police and conservancy in large periodical fairs.
Bill to declare illegal the collection of dues, tolls, or taxes on certain gunges and markets, and from boats in navigable rivers, and to provide for the maintenance of police in, and for the conservancy of, public fairs.	Hon'ble Mr. Reynolds	To provide for the levy of market-dues in towns, for the levy of tolls and mooring dues on navigable rivers, and for police and conservancy in large periodical fairs.	9th December 1876	Read in Council and referred to a select committee, 26th November 1876.
Bill to provide for the levy of a rate upon irrigated lands in the Lower Provinces of Bengal.	Hon'ble Mr. Ravenshaw.	To provide for the construction, maintenance, and regulation of canals, for the supply of water therefrom, and for the levy of rates on irrigable and protected lands.	31st March 1877 ...	Read in Council and referred to a select committee, 14th April 1877.
Bill to extend the Labour Districts' Emigration Act, 1873, to the districts of Chittagong and to the Chittagong Hill Tracts.	Hon'ble Mr. Bell ...	To extend the provisions of the Labour Districts' Emigration Act to the district of Chittagong and to the Chittagong Hill Tracts.	7th April 1877 ...	Read in Council and referred to a select committee, 14th April 1877.
Bill to amend the law relating to rent in the province of Chota Nagpore.	Hon'ble Mr. Reynolds	To amend the law relating to rent in the province of Chota Nagpore by suiting it to the requirements and exigencies of that province.	4th November 1876	Not yet read in Council.

Administration ...	Rs. 13,30,344	Rs. 13,51,802
Minor departments ..	1,27,748	1,15,644
Ecclesiastical ...	2,03,410	1,89,692
Political Agencies ...	5,224	3,951
Medical ...	3,40,109	3,48,560
	20,06,835	20,09,651	
Civil and political contingencies	4,23,775	5,40,621	
DETAILS. 1876-76. 1876-77.			
Administration ...	Rs. 2,95,440	Rs. 3,52,561
Minor departments	43,522	43,447
Ecclesiastical ...	32,676	35,355
Political Agencies	52,137	1,04,258
Medical	
	4,23,775	5,40,621	
Judicial charges, Courts	65,23,143	65,74,022	Chiefly under law officers, owing to the pay of the Superintendent and Legal Remembrancer having been increased, as also the increase in the establishment of the Superintendent and the new staff of mooktears.
Marine charges	22,39,668	20,79,935	Decreases under Master Attendant's marine establishment and Dockyard building, and repair of ships, coals purchased in the country, and timber stores, &c., purchased in the country, and miscellaneous, against increases under marine pay and allowances, pilotage, pilot establishments, &c., and marine pensions and gratuities, the latter owing to payments having been shown partly under marine and partly under superannuations in 1876-76.
Civil furlough and absentee allowances	5,602	First charge in 1876-77.
Superannuation, retired, and compassionate allowances	7,11,374	6,36,797	Chiefly owing to some portion of the payments for marine pensions and gratuities not having been adjusted under that head in 1875-76.
Loss by exchange... ..	133	1,268	
Miscellaneous	2,28,429	88,385	Charges connected with the visit of His Royal Highness the Prince of Wales to India in 1875-76.
Allotment for Provincial Services	1,10,61,517	1,11,11,574	Increased assignment in 1876-77 for Snake Poison Commission, Rs. 6,000; charges for exhibitions and fairs, Rs. 2,000; Ungool and Banka estates, Rs. 3,271, balance of special census grant, Rs. 49,483, against reduction on account of Form Store Department transferred to Superintendent of Stationery, Rs. 8,000; and cost of insane transferred from Dacca to Tezpur, Rs. 2,700.
Famine relief	50,79,067	...	No grants made on account of Famine Relief in 1876-77.
Total Imperial Services ..	2,84,19,512	2,31,88,368	

A.—FINANCE—concluded.

2.—Account of the Expenditure from the Net Income of the Province of Bengal for the year 1876-77—concluded.

SUBJECT OF EXPENDITURE.	AMOUNT.		CAUSE OF INCREASE OR DECREASE.
	Past year, 1875-76.	Present year, 1876-77.	
Municipalities	Rs. 4,84,710	Rs. 11,12,932	Increase due to the transfer of all Municipal Funds to the imperial accounts.
Nizamut Stipend Fund	25,98,150	15,88,201	Due to expenses in 1875-76 in connection with the Nawab Nazim's debt accounts.
PROVINCIAL SERVICES AND LOCAL FUNDS.			
PROVINCIAL SERVICES.			
Jails	17,83,414	10,42,198	Decrease under district jails and jail manufactures. Under the latter, owing to the transfer of Alipore Jail Press charges to printing.
Registration	4,31,286	4,80,591	Due chiefly to the transfer to this head of charges connected with the revenue record-room arrangement from miscellaneous.
Police	41,64,767	39,96,814	No payment to the Calcutta Justices this year on account of Government contribution; also savings under superintendence and district executive force. Against these reductions there is a full payment of contribution to the Suburban Municipality and larger expenditure for special police.
Education	26,32,444	24,47,958	Decrease under direction, colleges, schools (middle and low), normal schools, grant-in-aid, and miscellaneous, against increases under inspection, high and technical schools, and scholarships.
Medical	14,86,053	16,62,662	Primarily due to smaller expenditure for epidemic fevers, hospitals, also a reduction under medical colleges and schools, against increases under vaccination, lunatic asylums, and grants for medical purposes.
Printing	2,97,386	2,95,243	No adjustment for work done at the Alipore Jail Press against charges of the press establishment shown under Jails last year, and increase under Secretariat Press, Customs publications, and printing at private presses.
Marine	897	1,093	
Minor establishments	3,97,379	3,90,133	Decreases under model farms, sub-divisional establishments, Botanical Gardens, and cemeteries, against increases under Zoological Gardens, inter-provincial traffic, and establishment for collection of vital statistics.
Office rent, rates, and taxes	1,87,398	1,05,739	Increased payments for rents under law and justice, and for rates and taxes to municipalities.
Miscellaneous	6,51,395	3,25,034	Decrease due chiefly to payments in 1875-76 on account of abnormal rates towards estates for famine relief charges having been debited to this head.
Contributions	97,36,648	1,81,449	Contributions for famine relief debited to this head in 1875-76.
Public works	34,77,467	25,75,727	Charges incurred for famine relief debited to this head in 1875-76.
	2,52,46,632	1,38,94,621	
LOCAL FUNDS.			
Local Funds including Provincial Reserve Fund, but exclusive of municipalities ...	92,67,472	43,81,570	Swelled in 1875-76 by charges connected with famine relief. The balance at the credit of Provincial Reserve Fund at the close of 1875-76 was transferred to Government of India as a partial set-off against grants made by India on account of famine and the transfer of all Municipal Funds to imperial account.
Trust Funds	1,98,447	1,48,481	Decrease under Hooghly Emambarah, Prince Gholam Mahomed's Trust, and Midnapore Cyclone Relief.
Total ...	3,47,12,551	1,84,24,681	
Grand Total ...	6,62,14,923	4,43,12,182	
Surplus ...	9,23,28,008	9,61,36,782
